Heat and humidity regeneration

UNIT OPERATING LOGIC IN WINTER PERIOD

- One fan supplies fresh and cold air from outdoor, which flows through the correspondent part of the ceramic regenerator and absorbs accumulated heat and humidity.
- At the same time, another fan extracts stale and warm air from indoor, that flows through the other part of the ceramic regenerator and transfers heat energy and moisture to it.
- After 70 seconds operation the fans change the rotation direction and opposite processes start.

Control

- Control of the unit operation mode is performed by means of the sensor control panel located on the unit casing or the remote controller.

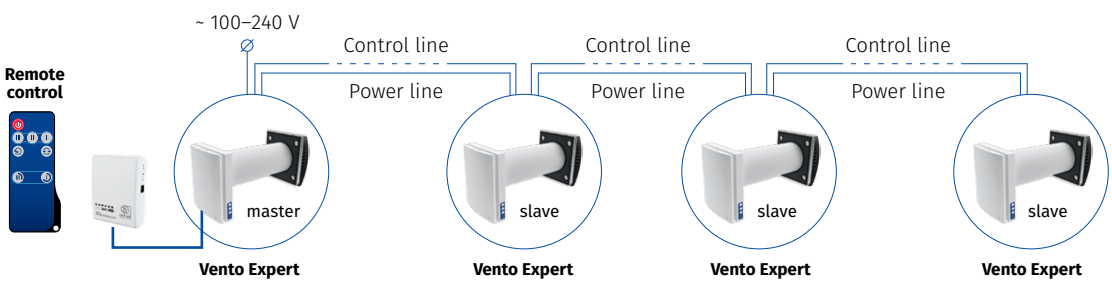

- Speed selection and OFF button
- Heat regeneration mode
- Ventilation mode
- Filter Alarm
- Master

- ON/OFF button
- 3 unit speeds
- Ventilation mode
- Heat regeneration mode
- Night timer: low speed activation for 8 hours
- Party timer: high speed activation for 4 hours

Vento Expert Duo either can operate as independent unit or can be wired with other units in a house and controlled with a master unit. In this case, only the master unit receives a signal from the remote control.

Vento Expert Duo is equipped with a humidity sensor for indoor humidity control. If humidity increases above a set point, the unit boosts to the speed III.
