Turbo

Inline mixed-flow fans

Use

- Supply and extract ventilation systems installed in various premises.
- Mounting in kitchens, bathrooms and other humid premises.
- Ventilation air ducts requiring high pressure, powerful air flow and low noise level.
- Compatible with Ø100 up to 315 mm round air ducts.

Air flow:
up to 1750 m³/h
486 l/s

Power:
from 23 W

Noise level:
from 27 dBA

Design

- Casing made of low-flammable polypropylene.
- Ventilation unit with terminal box. Can be turned to any position.
- Special design of the casing permits easy dismantling of the impeller and motor block for fan servicing without dismantling the air duct.

Motor

- Double-speed single-phase motor on ball bearings.
- Equipped with thermal overload protection.

Speed control

- The built-in switch (option **US**) or external switch for multi-speed fans (available upon separate order) are used to select one of two capacity modes.
- Smooth speed control is possible with a built-in speed controller (option **FR**) or an external thyristor speed controller (available upon separate order).

Mounting

- Due to compact design the fan is the ideal solution for mounting in limited spaces, including space behind a false ceiling.
- The fan can be installed in any section of the ventilation system from intake to the end of the ductworks.
- Wall or ceiling mounting with a mounting plate.
- TD:** mounting kit for installation of one diameter fans in parallel (for boosting capacity)

- TL:** mounting kit for installation of one diameter fans in series (for boosting pressure).

Accessories

Silencer	Panel filter	Pocket filter	Electric heater	Water heater	Backdraft air damper	Shutter	Clamp	Temperature controller	Speed controller	Timer / Sensor
SD	KFBK	KFBT	EKH	WKH	VRV	VKA	K	MLCD E2	CDP	CDPI/CDPE

Modifications and options

- **T:** run-out timer adjustable from 2 to 30 minutes.
- **US:** three-position speed switch integrated in the fan.

- **FR:** built-in smooth speed controller adjustable from 0 to 100 %. The fan is supplied with a pre-wired cable with IEC plug as a standard. The cable modification with a standard electric plug is also available (**FR1**).

- **G:** smooth speed controller with an electronic thermostat and an external temperature sensor that is fixed on 4 m cable. The fan is supplied with a pre-wired power cable with IEC plug as a standard. The cable modification with a standard electric plug is also available (**G1**).

- **GI:** smooth speed controller with an electronic thermostat and a temperature sensor integrated into the air duct. The fan is supplied with a pre-wired power cable with IEC plug as a standard. The cable modification with a standard electric plug is also available (**GI1**).

The options **G** and **GI** are used for automatic speed control depending on indoor temperature. The best ventilation solution for premises requiring permanent temperature control as greenhouses, orangeries, etc.

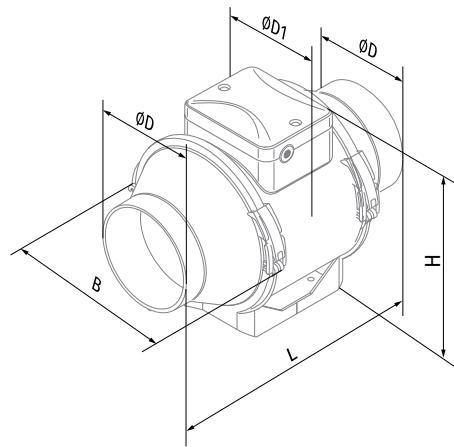

- **W:** the fan is equipped with a pre-wired power cable and IEC plug as a standard. Modification with a standard electric plug is available (**W1**).

Turbo EC

Mixed-type duct fans

Use

- Designed for supply and exhaust ventilation systems requiring high energy efficiency, excellent response, high pressure and air flow rate while keeping noise under control – such as high-humidity commercial and industrial spaces (e.g. bathrooms and kitchens) as well as flats, villas, shops and cafes.
- Compatible with air ducts from 100 to 315 mm in diameter.

Air flow:
up to 1995 m³/h
554 l/s

Power:
from 32 W

Noise level:
from 47 dBA

Design

- Turbo EC fans combine the versatility and outstanding performance of both axial and centrifugal fans producing a powerful air flow and high pressure while retaining the signature energy-efficiency and response of EC motors.
- The casing of Turbo EC fan is made of low-combustible polypropylene. The removable central unit with a motor, impeller and terminal box is attached to the fittings by means of special mounting brackets with integral latches. This helps to make the fan maintenance extremely simple and convenient. Fan service no longer requires major disassembly and dismantling of the fan: all you have to do is remove the main unit from the casing and carry out the maintenance as required.
- The inlet fitting has a profiled header which ensures smooth air flow into the fan. Conically shaped impelles with specially profiled blades cause circular velocity rise, that results in airflow boost and pressure increase comparing to conventional design.
- The fan outlet combination of a diffuser, specially designed impeller and rectifier allow for the optimim air distribution: high air capacity and pressure without excessive noise.

Motor

- The fans feature high-efficiency electronically commutated (EC) direct current motors. These state-of-the-art units offer excellent energy efficiency. In addition to that EC motors combine high performance and optimum response over the entire speed range. The performance efficiency of electronically commutated motors reaches a staggering 90%.

Speed control

- The fans are controlled by means of a 0-10 V control signal while the performance regulation is based on the feedback from the temperature, smoke and other sensors as well as other vital parameter settings. As the control signal changes the EC fan changes speed accordingly to supply the exact air amount required by the ventilation system.
- The maximum fan speed does not depend on the electric mains frequency enabling compatibility with both 50 Hz and 60 Hz networks. The fans can be easily combined into a single computer-controlled network. Special software allows for precise control over the operating parameters of the network units. All the system parameters can be monitored from the computer screen allowing to program operating parameters for each fan on the network individually.
- Integration of several fans into a single computer-controlled system with sensor feedback combined with speed control across the entire dynamic range.

Mounting

- The fans are intended for installation in matching diameter air ducts at any point of the ventilation system without limitation to mounting angle.
- The fan casing has a flat mounting plate for a secure wall mounting.
- Electrical connection and installation must be performed in accordance with the instruction manual and the electrical connections diagram applied to the terminal box.
- A single system may have several fans installed in parallel to boost the output capacity or in series to boost the working pressure.

Ducto

In-line fans

Use

- Brand new low-noise axial inline fans for exhaust or supply ventilation with superior capacity up to 375 m³/h.
- Designed for PVC ducting systems or flexible ducts.
- From low to medium air flow motion for short distances at low air resistance.
- Compatible with Ø 100, 125 and 150 mm air ducts.

Air flow:
up to 375 m³/h
104 l/s

Power:
from 4.5 W

Noise level:
from 22 dBA

Design

- The casing and the impeller are made of high-quality durable plastic.
- Specially designed mixed-flow impeller profile ensures high air flow and low noise level.
- Low energy usage from 4.5 W.
- The models of Blauberg Ducto Series are equipped with a single-phase motor and are available in single- or two speed modifications.
- The motors have thermal overheating protection for motor overload prevention.
- Motor on special anti-vibration connectors.

Options

- Ducto Plus** – reliable single-phase two speed motor.
- Ducto Power Plus** – two-speed high-powered motor.
- Ducto T** – modification with a regulated timer with the operating time from 2 to 30 minutes.
- Ducto W1** – modification with a power cord with IEC C14 electric plug.

Control

- Manual speed control with a room light switch. It is not included in the delivery package.
- Smooth speed control with a thyristor speed controller (see Electrical Accessories). Several fans may be connected to the same controller. The models with timer are not compatible with a speed controller.
- Automatic fan control with the electronic control unit MCD 60/0.3 (see Electrical Accessories). The control unit is supplied separately.
- Automatic fan control with the timer T (built-in turn-off delay timer enables the fan operation within 2 to 30 minutes after the fan switching off).

Operation modes of fans with timer

- Updated automatic control for T modifications of models **Ducto Plus 100, 125, 150** and **Ducto Power Plus 150** enables to set one of four available operation modes. Changeover to another operation mode by means of by setting the DIP switch to a respective position.
- Mode 1** (single-speed mode)
The fan is turned off by default. The fan starts operating with the 1st speed when the switch is closed.
- Mode 2** (single-speed mode)
The fan is turned off by default. The fan starts operating with the 2nd speed when the switch is closed.
- Mode 3** (two-speed mode)
The fan operates with the 1st speed by default. The fan switches to the 2nd speed when the switch is closed.
- Mode 4** (automatic interval mode)
The fan operates at the 1st speed by default. Each set time (adjustable from 1 to 15 hours) the fan switches to the 2nd speed automatically and reverts back to 1st speed after 2 - 30 minutes operation with maximum capacity.

Fixing bracket

- Ducto-U** – modification with a fixing bracket for flat surface mounting.

Overall dimensions and mounting

- The fan is mounted into a matching duct size. Fastening with clamps in case of flexible duct connection.
- The mounting bracket enables installation of the fan on horizontal and vertical flat surfaces (Ducto-U model).
- Two fans can be installed in series for higher operation pressure.

Mix-E

Inline mixed-flow fans in metal casing

Use

- The Mix-E fans combine the versatility and outstanding performance of both axial and centrifugal fans. These units are intended for combined supply and exhaust ventilation systems which are used to transport large amounts of air at high pressure while keeping noise under control. The fans are compatible with air ducts from 355 to 500 mm in diameter. The units can be used for ventilation of residential, public and industrial spaces.

Air flow:
up to 11900 m³/h
3306 l/s

Power:
from 578 W

Noise level:
from 57 dBA

Design

- The fan casing is made of steel sheets with a polymer coating. The mounting brackets on the casing enable a variety of installation configurations. The fan casing is equipped with an external water-tight terminal box for electrical connections.

Speed control

- Infinitely variable or stepped speed regulation is provided by means of a thyristor or autotransformer controller. Several fans may share the same controller provided that the combined power output and operating current are within the controller ratings.

Motor

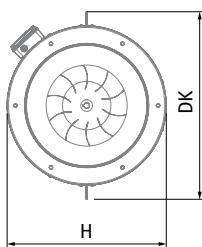

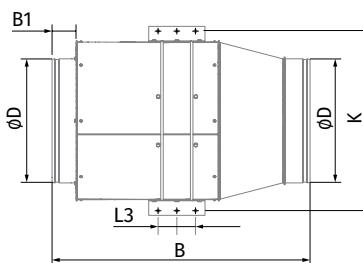

- The fan motor shaft is mated to an impeller with diagonal blades. The units are equipped with single-speed 4-pole single-phase or three-phase motors. The motors have thermal contacts built into the coils for overheating protection.

Mounting

- The fans can be installed at the inlet or outlet of the ductwork or in the middle. The ducts can be fitted at any angle relative to the fan axis. A single system may have several fans installed in parallel to boost the output capacity or in series to boost the working pressure.

Centro

Inline centrifugal fans

Use

- Supply and extract ventilation systems installed in various premises.
- Mounting in kitchens, bathrooms and other humid premises.
- Compatible with Ø100 up to 315 mm round air ducts.

Air flow:
up to 1700 m³/h
472 l/s

Power:
from 61 W

Noise level:
from 36 dBA

Design

- High-quality durable plastic casing.
- Aerodynamically shaped casing.
- Airtight mounting box.
- Centro 150 is compatible with 150 and 160 mm air ducts.

Motor

- Single-phase external rotor motor with a centrifugal impeller with backward curved blades.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.
- Dynamically balanced turbine.
- Some standard sizes have high-powered motors (**Centro max**).
- For ventilation of premises with high requirements to noise level low-noise modifications are available (**Centro L**).

Modifications and options

- FR:** built-in smooth speed controller from 0 to 100 %. The fan is supplied with a pre-wired power cable with IEC plug as a standard. The cable modification with a standard electric plug is also available (**FR1**).

Speed control

- Smooth speed control with a built-in electronic speed controller (option **FR**).
- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

- max:** high-powered motor.
- L:** low-powered motor.
- G:** smooth speed controller with an electronic thermostat and an external temperature sensor that is fixed on 4 m power cable. The fan is supplied with a pre-wired power cable with IEC plug as a standard. The cable modification with a standard electric plug is also available (**G1**).

Mounting

- Due to compact design the fan is the ideal solution for mounting in limited spaces.
- Any mounting position.
- Wall or ceiling mounting with fixing brackets supplied as a standard or with a wire frame **Halter Centro** (available upon separate order).
- Flexible air ducts are fixed on the fan spigots with clamps.

Centro EC

Inline centrifugal fans with EC motor

Use

- Supply and exhaust ventilation and air conditioning systems of various premises requiring cost-saving controllable ventilation.
- The best ventilation solution for exhaust ventilation of bathrooms, kitchens and other humid premises.
- Compatible with Ø 100 up to 315 mm round air ducts.

Air flow:
up to 1500 m³/h
417 l/s

Power:
from 82 W

Noise level:
from 40 dBA

Design

- Durable, impact-resistant and corrosion-free ABS-plastic casing.
- Aerodynamically shaped casing.
- Airtight terminal box for connection to power mains.

Motor

- High-efficient electronically commutated direct current motors with backward curved blades. Such motors are the most state-of-the-art energy saving solution. Power consumption of EC motors is 35% less as compared to standard motors. The fans with EC motors have excellent aerodynamic performance and low-noise operation.
- EC motors are featured with high performance and total speed controllable range.
- High efficiency reaching 90% is the premium advantage of the electronically-commutated motors. The motors are equipped with ball bearings designed for at least 40 000 operating hours.

Speed control

- The fan is operated with an 0-10 V control signal.
- The air capacity is controlled depending on air temperature, pressure level, smoke content, etc.
- The speed of the EC motor changes proportionally to fluctuations of the control parameter and the fan delivers a required air volume to the ventilation system. Maximum fan speed does not depend on the current frequency.
- The fan is compatible both with 50 or 60 Hz power mains.
- The fans may be integrated into a unified data processing control system. The specially designed software provides precise control of all the fans integrated into the system.

Mounting

- The fans are designed for duct mounting in any point of the ventilation system with the casing mounted at any angle. In case of vertical mounting a protective outer hood must be installed on the top.
- Fixation to the floor wall or ceiling is performed with the supplied mounting brackets.
- Electric connection and installation must be performed in compliance with the manual and the wiring diagram on the terminal box.

Mounting bracket for easy installation supplied with the fan

Modifications and options

- FR:** built-in smooth speed controller from 0 to 100 %. The fan is supplied with a pre-wired power cable with IEC plug as a standard.

Centro-M

Inline centrifugal fans

Use

- Supply and extract ventilation systems installed in various premises.
- Direct mounting inside air ductworks.
- Compatible with Ø100 to 450 mm round air ducts.

Air flow:
up to 5260 m³/h
1461 l/s

Power:
from 60 W

Noise level:
from 36 dBA

Design

- The casing is made of steel with a special polymer coating.
- Aerodynamically shaped casing.
- External terminal box for connection to power mains.

Motor

- Single-phase external rotor motor with a centrifugal impeller with backward curved blades.
- Equipped with ball bearings for longer service life.
- Overheating protection by built-in thermal switches with automatic restart.
- Dynamically balanced turbine.
- Some standard sizes have high-powered motors (**Centro-M max**).
- For ventilation of premises with high requirements to noise level low-noise modifications are available (**Centro-M L**).

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

- Any mounting position.
- The fans with the connecting diameter from 100 up to 315 mm are fixed to wall or ceiling with mounting brackets supplied as a standard.
- The fans with the connecting diameter from 355 up to 450 mm are fixed with mounting brackets fixed on the casing.
- Flexible air ducts are fixed on the fan spigots with clamps.

Modifications and options

- FR:** built-in smooth speed controller from 0 to 100 %. The fan is supplied with a pre-wired power cable with IEC plug as a standard. The cable modification with a standard electric plug is also available (FR1).
- FR1:** The fan is equipped with a power cable with a plug or euro plug. (For standard sizes 100-315).

- G:** smooth speed controller with an electronic thermostat and an external temperature sensor that is fixed on 4 m power cable. The fan is supplied with a pre-wired power cable with IEC plug as a standard. The cable modification with a standard electric plug is also available (G1).

- max:** high-powered motor.
- L:** low-powered motor.
- W:** the fan is equipped with a pre-wired power cable and IEC plug as a standard. Modification with a standard electric plug is available (W1).

Centro-M EC

Inline centrifugal fans with EC motor

Use

- Supply and extract ventilation systems installed in various premises.
- Direct mounting inside air ductworks.
- For arranging energy-saving and controllable ventilation systems.
- Compatible with Ø100 to 315 mm round air ducts.

Air flow:
up to 2100 m³/h
583 l/s

Power:
from 83 W

Noise level:
from 44 dBA

Design

- The casing is made of steel with a special polymer coating.
- Aerodynamically shaped casing.
- External terminal box for connection to power mains.

Motor

- High-efficient direct current EC motor with external rotor and backward curved blades.
- EC technologies meet the latest requirements to arrange high-efficient energy saving ventilation.
- EC motors have energy demand by 35 % less as compared to standard motors and have efficiency up to 90 %.
- EC motors are featured with high performance, low noise level and well controllable total speed range.
- Overheating protection by built-in thermal switches with automatic restart.
- Dynamically balanced turbine.

Operation and speed control

- The fan is controlled with a 0-10 V external control signal, e.g. CDT E/0-10 speed controller for EC motors.
- The fan capacity is regulated by various parameters, including temperature level, pressure, smoke, etc.
- EC motor changes its rotation speed synchronously with the fluctuation of the control parameter to ensure the best suitable air flow.
- The fan is compatible with 50 and 60 Hz power mains with the same maximum speed.
- The parameters may be set and controlled due to data exchange between a PC and the fan.
- The fans can be integrated into a unified decentralized computerized network to adjust ventilation system with respect to specific user's demands.

Mounting

- Any mounting position.
- Fans are fixed to wall or ceiling with mounting brackets supplied as a standard.
- Flexible air ducts are fixed on the fan spigots with clamps.

Centro-MZ

Inline centrifugal fans

Use

- Supply and extract ventilation systems installed in various premises.
- The best solution both for humid indoor premises and outside areas.
- Compatible with Ø100 up to 315 mm round air ducts.

Air flow:
up to 1540 m³/h
428 l/s

Power:
from 60 W

Noise level:
from 35 dBA

Design

- Galvanized steel casing.
- Aerodynamically shaped casing.
- External terminal block for power supply.

Motor

- Single-phase external rotor motor with a centrifugal impeller with backward curved blades.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.
- Dynamically balanced turbine.
- For ventilation of premises with high requirements to noise level low-noise modifications are available (**Centro-MZ L**).

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

- Any mounting position.
- Wall or ceiling mounting with fixing brackets supplied as a standard.
- Flexible air ducts are fixed on the fan spigots with clamps.

Modifications and options

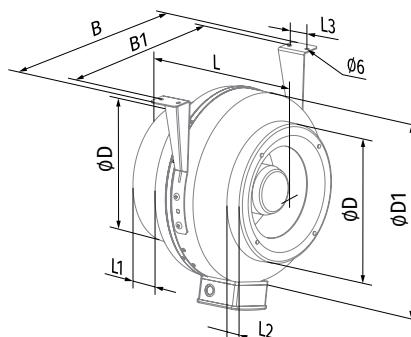

- max:** high-powered motor.
- L:** low-powered motor.
- W1:** the fan is equipped with a power cord and a socket or plug (**W1**).

Box

Inline centrifugal fans

Use

- Supply and extract ventilation systems installed in small premises.
- Mounting in limited space.
- Compatible with Ø100 up to 160 mm round air ducts.

Air flow:
up to 553 m³/h
154 l/s

Power:
from 58 W

Noise level:
from 47 dBA

Design

- Compact steel casing covered with special polymer coating.
- Casing height from 110 up to 175 mm depending on the modification.
- Aerodynamically shaped casing.
- External terminal block for power supply.
- A hinged cover plate provides easy access to the motor with no need to dismantle the fans and air ducts.
- The connection spigots are equipped with rubber seals.

Motor

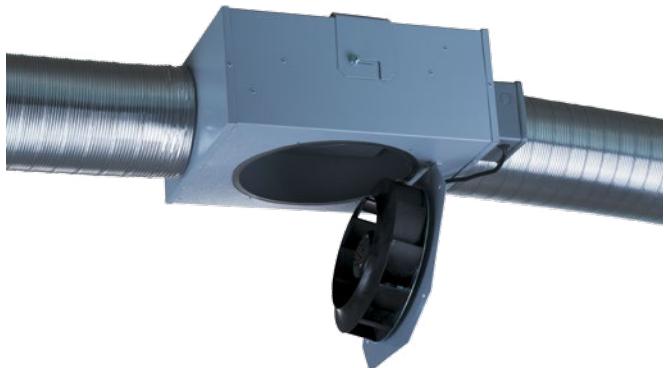

- Single-phase external rotor motor with a centrifugal impeller and backward curved blades.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.
- Dynamically balanced turbine.

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

- Due to compact design the fan is the ideal solution for mounting in limited spaces, including the space behind false ceiling.
- Any mounting position.
- Wall or ceiling mounting with a fixing bracket supplied as a standard.
- Flexible air ducts are fixed on the fan spigots with clamps.

Box-R

Inline centrifugal fans

Use

- Supply and extract ventilation systems installed in small premises.
- High-pressure inline fan for ventilation systems installed in multi-level buildings and premises.
- Mounting in limited space.
- For multiport extract ventilation from several premises.
- Compatible with Ø80 up to 100 mm round air ducts.

Air flow:
up to 176 m³/h
49 l/s

Power:
from 20 W

Noise level:
from 32 dBA

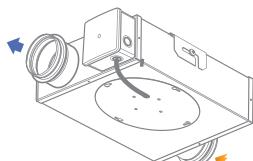

Design

- Steel supercompact casing covered with special polymer coating.
- Minimum casing height is only 90 mm.
- Aerodynamically shaped casing.
- External terminal block for power supply.
- Swivel cover provides easy access to the motor.
- Various casing modifications include from 1 to 6 inlet spigots.
- The connection spigots are equipped with rubber seals.

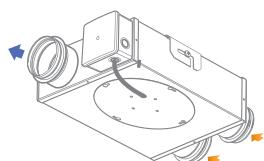

Motor

- Single-phase three-speed external rotor motor with a centrifugal impeller made of galvanized steel.
- Impeller with forward curved blades for high pressure in the ductwork system.
- turbine is designed to maintain permanent air flow irrespective of air resistance fluctuations in the ductworks.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.
- Dynamically balanced turbine.

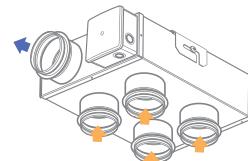

Modifications

1 inlet pipe
Ø80 or 100 mm

2 inlet pipes
Ø80 or 100 mm

4 inlet pipes
Ø80 or 100 mm

5 inlet pipes
Ø80 or 100 mm

6 inlet pipes
Ø80 or 100 mm

Speed control

- Automatic fan speed control as a function of air resistance in the ductwork system provides permanent air flow rate.
- Three-button speed switch provides manual speed control. Available upon order.
- Smooth or step speed control with a thyristor or autotransformer speed controller (available upon order) connected to the maximum speed terminal of the motor.

Mounting

- Due to compact design the fan is the ideal solution for mounting in limited spaces, including the space behind false ceiling.
- Any mounting position.
- Wall or ceiling mounting with a fixing bracket supplied as a standard.
- Flexible air ducts are fixed on the fan spigots with clamps.

Altero 150

Inline mixed flow reversible fans

Use

- Ventilation for bathrooms and kitchens.
- Compatible with Ø150 mm round air ducts.
- Suitable for limited mounting space.

Air flow:
up to 320 m³/h
89 l/s

Power:
from 34 W

Noise level:
from 34 dBA

Design

- One fan providing supply and exhaust ventilation for different premises.
- The fan casing is equipped with mounting brackets for easy installation.
- Corrosion free.
- Collars with a rubber sealant prevent air leakage and pressure loss.
- The fan is equipped with a service door and removable ventilator block for easy maintenance.
- Built in automatic control board.
- Vibration free operation.

Motor

- Specifically designed impellers provide a powerful, yet smooth and quiet airflow.
- Motor with thermal overload protection.
- Long-life ball bearing (up to 40 000 hours).
- Three-year warranty from time of installation.

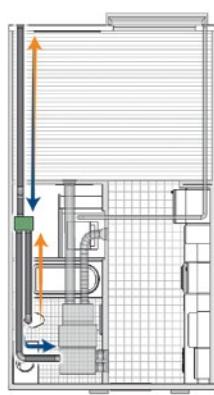

Speed control

- Integrated controller provides automatic switching between supply and exhaust modes in accordance with code requirements.

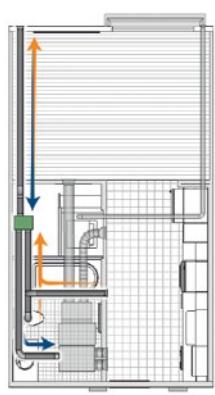

Mounting

- The combination of supply and exhaust, along with a low profile housing, makes this fan suitable for low ceilings and tight spaces.
- One duct replacing the bathrooms, kitchen (when applicable) and outside air ducts.
- The amount of drop ceilings will be reduced due to eliminating ducts.
- Eliminates clearance requirements between outside air and bathrooms/kitchen (low rise).
- Easy installation.

Ceileo

Centrifugal fans

Use

- Intermittent or continuous ventilation of bathrooms, showers, kitchens and other domestic spaces.
- For high-resistant ventilation systems.
- Compatible with Ø 100 or 150 mm air ducts.

Air flow:
up to 320 m³/h
89 l/s

Power:
from 20 W

Noise level:
from 24 dBA

Features

- Centrifugal extract low-noise and low-watt fans for ceiling mounting.
- Integrated LED-light with low energy demand (**Ceileo Light** models).
- Low noise level.
- The centrifugal impeller has forward curved blades for high pressure and low noise.
- The motor impeller is made of high-quality durable ABS plastic.
- The fans also feature a gravity backdraft damper.
- Ingress protection rating IPX4.

Design

- The casing is made of galvanized steel.
- The clip-on plastic grille ensures easy mounting and cleaning of the fan.
- The modular design enables easy retrofitting with the optional humidity and motion sensors (except for the basic model) or the grille with a light.

Motor

- The Ceileo fans are equipped with reliable asynchronous two-speed motors with overheating protection.
- The maintenance-free permanently lubricated motor bearings are engineered for over 40 000 operating hours of trouble-free operation.

Options

- **Ceileo:** Double-speed basic fan model.
- **Ceileo T:** Models with an adjustable turn-off delay timer.
This model can also be retrofitted with an optional humidity or motion sensor (available on a special order).

Mounting

- The fan is integrated into ceiling spaces.
- The fan is attached to the ceiling joists with spreader claws and self-tapping screws.
- The flexible air duct is attached to the fan exhaust spigot with a fixing clamp.

Control

- The built-in control panel of the Ceileo T fans enables the following settings:
 - turn-off delay
 - humidity level
 - air flow for the modes 1 and 2.

Name	Adjustment range for operation modes 1 and 2
Ceileo 200 T	Off / low speed / high speed
Ceileo 250 T	Off / low speed / high speed
Ceileo 300 T	Off / low speed / high speed

MANUAL CONTROL

The fan is controlled by means of the CDP-2/10 speed switch (available as a specially ordered accessory).

AUTOMATIC CONTROL

- **Timer "T":** The fan is constantly set to Mode 1. The mode 2 is triggered by the light switch closing. Upon the light switch opening the built-in turn-off delay timer keeps the fan running in the mode 2 from 1 to 90 minutes. On elapsing of this period the fan reverts to the mode 1.
- **Timer "T" and humidity sensor** (specially ordered accessory): the fan runs constantly in the mode 1.
 - If the indoor humidity level exceeds the sensor threshold value set in the 60-90 % range, the fan switches to the mode 2.
 - When the humidity level reverts to the pre-set value, the built-in turn-off delay timer keeps the fan running in the mode 2 from 1 to 90 minutes. On elapsing of this period the fan reverts to the mode 1.
- **Timer "T" and motion sensor** (specially ordered accessory): the fan runs constantly in the mode 1.
 - If the motion sensor detects movement within its range, the fan goes to the mode 2. When the movement is no longer registered, the built-in turn-off delay timer keeps the fan running in the mode 2 from 1 to 90 minutes. On elapsing of this period the fan reverts to the mode 1.

Ceileo DC

Centrifugal fans

Use

- Intermittent or continuous ventilation of bathrooms, showers, kitchens and other domestic spaces.
- For high-resistant ventilation systems.
- Compatible with Ø 100 or 150 mm air ducts.

Air flow:
up to 254 m³/h
71 l/s

Power:
from 19 W

Noise level:
from 23 dBA

Features

- Centrifugal extract low-noise and low-watt fans for ceiling mounting.
- DC motor with low energy demand.
- Integrated LED-light with low energy demand (**Ceileo DC Light** models)
- The modular design enables easy retrofitting with the optional humidity and motion sensors (except for the basic model) or the grille with a light.
- Low noise level.
- Constant air flow.
- The centrifugal impeller has forward curved blades for high pressure and low noise.
- The motor impeller is made of high-quality durable ABS plastic.
- The fans also features a gravity backdraft damper.

Design

- The casing is made of galvanized steel.
- The clip-on plastic grille ensures easy mounting and cleaning of the fan.
- The modular design enables easy retrofitting with the optional humidity and motion sensors (except for the basic model) or the grille with a light.

Motor

- The **Ceileo DC** fans feature high-efficient low-watt direct current motors with overheating protection.
- The constant air flow technology provides required air flow in a wide range of static pressure.

Options

- **Ceileo DC** fans include an integrated turn-off delay timer. The fan can also be retrofitted with an optional humidity or motion sensor (available on a special order).

Mounting

- The fan is integrated into ceiling spaces.
- The fan is attached to the ceiling joists with spreader claws and self-tapping screws.
- The flexible air duct is attached to the fan exhaust spigot with a fixing clamp.

Control

- The built-in control panel of the Ceileo T fans enables the following settings:
 - turn-off delay
 - humidity level
 - air flow for the modes 1 and 2.

Name	Adjustment range for operation modes 1 and 2
Ceileo DC 110	Off / 100 / 120 / 135 / 155 / 170 / 190 m ³ /h
Ceileo DC 150	Off / 100 / 120 / 135 / 155 / 170 / 190 / 205 / 220 / 240 / 250 m ³ /h

MANUAL CONTROL

The fan is controlled by means of the CDP-2/10 speed switch (available as a specially ordered accessory).

AUTOMATIC CONTROL

- **Timer:** The fan is constantly set to Mode 1. The mode 2 is triggered by the light switch closing. Upon the light switch opening the built-in turn-off delay timer keeps the fan running in the mode 2 from 1 to 90 minutes. On elapsing of this period the fan reverts to the mode 1.
- **Timer and humidity sensor** (specially ordered accessory): the fan runs constantly in the mode 1.
 - If the indoor humidity level exceeds the sensor threshold value set in the 60-90 % range, the fan switches to the mode 2.
 - When the humidity level reverts to the pre-set value, the built-in turn-off delay timer keeps the fan running in the mode 2 from 1 to 90 minutes. On elapsing of this period the fan reverts to the mode 1.
- **Timer and movement sensor** (specially ordered accessory): the fan runs constantly in the mode 1.
 - If the motion sensor detects movement within its range, the fan goes to the mode 2. When the movement is no longer registered, the built-in turn-off delay timer keeps the fan running in the mode 2 from 1 to 90 minutes. On elapsing of this period the fan reverts to the mode 1.

Box-D

Exhaust centrifugal fans

Use

- Extract ventilation systems installed in various premises.
- Mounting into suspended ceiling.
- Compatible with Ø100, 125 and 150 mm round air ducts.

Air flow:
up to 531 m³/h
148 l/s

Power:
from 56 W

Noise level:
from 42 dBA

Design

- Compact galvanized steel casing.
- The front panel is made of ABS plastic and is equipped with a replaceable filter.
- The filter protects motor, impeller and air ducts against soiling.
- Fitted with a spring-loaded damper for back drafting prevention.
- The connection spigot is equipped with rubber seal.
- External terminal block for power supply.

Motor

- Single-phase external rotor motor. Centrifugal impeller with backward curved blades.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.
- Dynamically balanced turbine.

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

- The fan is installed between ceiling and false ceiling by fixing brackets supplied as a standard.
- Power is supplied to the fan through an external terminal box.
- Flexible air duct is fixed on the fan spigot with a clamp.

Modifications and options

- L: low-powered motor.

Extero

Exhaust centrifugal fans

Use

- Extract ventilation systems installed in various premises.
- External wall mounting from outside.
- Compatible with Ø100 up to 200 mm round air ducts.

Air flow:
up to 710 m³/h
197 l/s

Power:
from 71 W

Noise level:
from 54 dBA

Design

- Steel casing with a special polymer atmospheric resistant coating.
- Special design of the casing protects the motor against direct sprays of water.
- Vertical air exhaust downwards through a protecting screen against birds and rodents.
- Back side has a special sealant for tight contact and adaption to the wall.
- The connection spigot is equipped with rubber seal.

Motor

- Single-phase external rotor motor with a centrifugal impeller with backward curved blades.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.
- Dynamically balanced turbine.

Speed control

- Smooth or step speed control with a thyristor or autotransformer speed controller (available upon order) connected to the maximum speed terminal of the motor.

Mounting

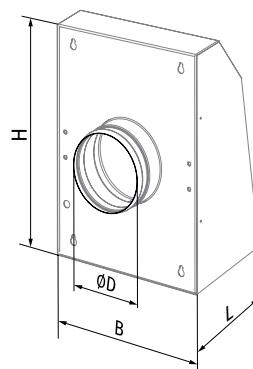

- Vertical mounting on external walls of buildings and premises.
- Flexible air duct is fixed on the fan spigot with a clamp.
- The fan with connected air duct is fixed at the wall on a mounting plate. Power supply through the external terminals. After mounting of the ventilator a protection cover is mounted over the mounting plate.

Iso-Mix

Sound-insulated inline mixed-flow fans

Use

- Supply and extract ventilation systems installed in various premises with high requirements to the noise level.
- For ventilation air ducts requiring high pressure, powerful air flow and low noise level.
- Compatible with Ø100 up to Ø315 mm air ducts.

Air flow:
up to 1920 m³/h
533 l/s

Power:
from 24 W

Noise level:
from 23 dBA

Design

- The casing is made of polymer-coated steel, internally filled with 50 mm mineral wool thermal- and sound-insulating layer.
- Special inner perforation of the casing and sound-insulating material are designed for wide-frequency sound absorbing.
- Mixed-flow impeller made of high-quality plastic.
- The diffusor, the specially profiled impeller and directing vanes provide high performance and powerful pressure combined with low noise operation.
- External airtight terminal block on the fan casing for power supply.
- Mounting brackets on the fan casing for mounting to the floor, to the wall or ceiling.

Motor

- Double-speed single-phase high-efficient motor with low energy demand on ball bearings.
- Overheating protection by built-in thermal switches.
- Motor ingress protection rating IPX4.

- G:** smooth speed controller with an electronic thermostat and an external temperature sensor that is fixed on 4 m cable. The fan is supplied with a pre-wired power cable with IEC plug as a standard. The cable modification with a standard electric plug is also available (**G1**).

Speed control

- Speed selection with a built-in speed switch (US option) or an external multi-speed switch (special accessory).
- Smooth speed control is possible either with an integrated speed switch (FR option), an external thyristor or transformer speed controller (special accessory) when connected to the maximum speed terminal.

- GI:** smooth speed controller with an electronic thermostat and a temperature sensor integrated into the air duct. The fan is supplied with a pre-wired power cable with IEC plug as a standard. The cable modification with a standard electric plug is also available (**GI1**).
G and **GI** options enable automatic speed control depending on indoor temperature. The best solution for ventilation of premises with permanent temperature control, e.g. greenhouses.
- W:** pre-wired power cable and IEC plug as a standard. Modification with a standard electric plug is available (**W1**).

Mounting

- Due to its compact design the fan is the ideal solution for mounting in limited spaces.
- The fan is suitable for mounting in any section of the ventilation system from intake to the end of the ductwork.
- Wall or ceiling mounting with a special mounting plate on the fan casing.

Modifications and options

- T:** adjustable run-out timer regulated from 2 to 30 minutes.
- US:** three-position speed switch integrated in the fan.
- FR:** built-in smooth speed controller from 0 to 100 %. The fan is supplied with a pre-wired power cable with IEC plug as a standard. The cable modification with a standard electric plug is also available (**FR1**).

Iso-Mix EC

Sound-insulated inline mixed-flow fans

Use

- Combined supply and exhaust ventilation systems of various commercial and industrial spaces with stringent noise requirements (such as libraries, conference halls, classrooms, kindergarten playrooms etc.).
- For ventilation air ducts requiring high pressure, powerful air flow and low noise level.
- Compatible with Ø100 up to Ø315 mm air ducts.

Air flow:
up to 1995 m³/h
554 l/s

Power:
from 32 W

Noise level:
from 37 dBA

Features

- The new series of **Iso-Mix EC** duct fan series is provided with a special noise-insulated casing which ensures silent operation and excellent aerodynamic characteristics.
- Iso-Mix EC** fans combine the versatility and outstanding performance of both axial and centrifugal fans producing a powerful air flow and high pressure while retaining the signature energy-efficiency and response of EC motors.
- Several fans can be integrated into a single computer-controlled system with sensor feedback combined with speed control across the entire dynamic range.

Design

- The external casing is made of steel with a polymer coating.
- The internal casing perforations conduct sound waves and direct them at the noise-absorbing material at a specific angle. Noise and heat insulation is ensured by a mineral wool layer 50 mm in thickness. Wideband noise control is achieved by means of special casing perforation and the use of noise-absorbing material.
- The inner casing and the impeller are made of durable high-quality plastic.
- Conical impellers with specially profiled blades help boost angular velocity of the air flow resulting in higher pressure and air capacity compared to the conventional designs. The combination of a diffuser, a specially designed impeller and flow straightener vanes at the fan outlet allow for an optimum flow distribution to achieve high capacity and increased air pressure without generating excessive noise.
- The fan casing is equipped with an external water-tight terminal box for electrical connections.

Motor

- The fans feature high-efficiency electronically commutated (EC) direct current motors. These state-of-the-art units offer excellent energy efficiency.
- EC motors combine high performance and optimum control across the entire speed range. The performance efficiency of the electronically commutated motors reaches 90%.

Speed control

- The fans are controlled by means of a 0-10 V control signal while the performance regulation is based on the feedback from the temperature, smoke and other sensors as well as other vital parameter settings.
- As the control signal changes the EC fan adjusts the speed to supply the exact amount of air required by the ventilation system. The maximum fan speed does not depend on the electric mains frequency enabling compatibility with both 50 Hz and 60 Hz networks.
- The fans can be easily combined into a single computer-controlled network. Special software allows for precise control over the operating parameters of the network units. All the system parameters can be monitored from a computer screen allowing to program operating parameters for each fan on the network individually.

Mounting

- The fans are designed to be used with round air ducts.
- The fan casing has mounting brackets for convenient installation onto the floor, walls or ceiling. The ducts can be fitted at any angle relative to the fan axis.
- Make sure to provide sufficient maintenance access during fan installation. Electrical connection and installation must be performed in accordance with the instruction manual and the electrical connections diagram applied to the terminal box.
- A single system may have several fans installed in parallel to boost the output capacity or in series to boost the working pressure.

Iso-Mix-E

Mixed-type duct fans in noise-insulated casing

Use

- The Iso-Mix-E fans combine the amazing versatility and outstanding performance of both axial and centrifugal fans.
- These units are intended for combined supply and exhaust ventilation systems which are used to transport large amounts of air at high pressure while keeping noise under control.
- The fans are compatible with air ducts from 355 to 450 mm in diameter. The units can be used for ventilation of residential, public and industrial spaces.

Air flow:
up to 6510 m³/h
1808 l/s

Power:
from 578 W

Noise level:
from 49 dBA

Design

- The casing is made of steel with a polymer coating. Conical impellers with specially profiled blades help boost angular velocity of the air flow resulting in higher pressure and air capacity compared to the conventional designs. The fan casing is equipped with an external water-tight terminal box for electrical connections.

Speed control

- Infinitely variable or stepped speed regulation is provided by means of a thyristor or autotransformer controller. Several fans may share the same controller provided that the combined power output and operating current are within the controller ratings.

Motor

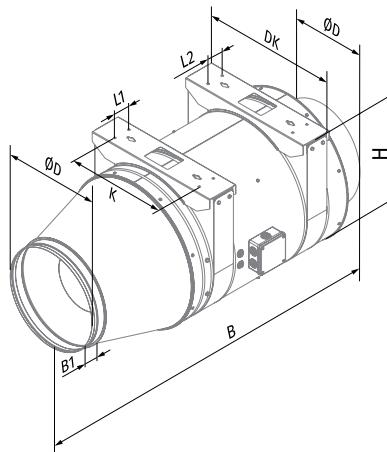

- The fan motor shaft is mated to an impeller with diagonal blades. The units are equipped with single-speed 4-pole single-phase or three-phase motors. The motors have thermal contacts built into the coils for overheating protection.

Mounting

- The fans can be installed at the inlet or outlet of the ductwork or in the middle. The ducts can be fitted at any angle relative to the fan axis. A single system may have several fans installed in parallel to boost the output capacity or in series to boost the working pressure.

Iso Box-R (V2)

Sound-insulated centrifugal fans

Use

- Supply ventilation systems installed in premises with high requirements to clean air and the noise level.
- Compatible with Ø100 up to 200 mm round air ducts.
- Suitable for limited mounting space.

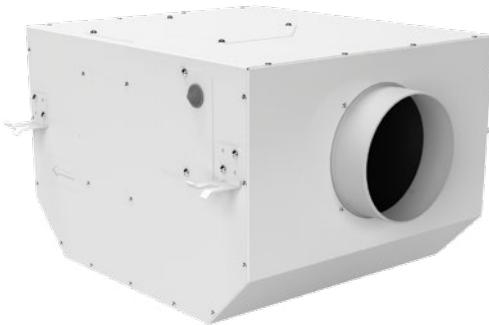

Air flow:
up to 600 m³/h
167 l/s

Power:
from 36 W

Noise level:
from 14 dBA

Design

- The casing is made of polymer-coated steel, internally filled with sound-insulating layer.
- Internal airtight terminal box for power supply.

Motor

- Iso Box-R** series: four-pole asynchronous motor with external rotor and centrifugal impeller with forward curved blades.
- Iso Box-R V2** series: two-speed asynchronous motor with external rotor and centrifugal impeller with forward curved blades.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.
- Dynamically balanced turbine.

Speed control

- Iso Box-R** series: Smooth speed control with an external CDT E1.8 thyristor controller (available upon separate order).
- Iso Box-R V2** series: Two-speed control with the external CDP-2/10 speed switch (available upon separate order).

Mounting

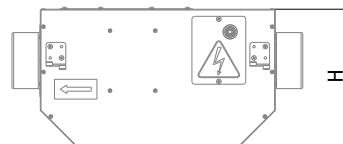

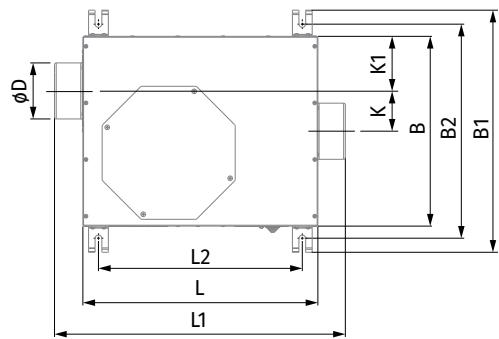

- Due to compact design is the ideal solution for mounting in limited spaces, including the space behind false ceiling.
- Any mounting position.
- Wall or ceiling mounting with fixing brackets supplied as a standard.

Iso Box-F (V2)

Sound-insulated centrifugal fans with filters

Use

- Supply ventilation systems installed in premises with high requirements to clean air and the noise level.
- Compatible with Ø100 up to 200 mm round air ducts.
- Suitable for limited mounting space.

Air flow:
up to 630 m³/h
175 l/s

Power:
from 32 W

Noise level:
from 14 dBA

Design

- The casing is made of polymer-coated steel, internally filled with sound-insulating layer.
- Internal airtight terminal box for power supply.
- Easy access for filter maintenance.

Motors

- Iso Box-F** series: four-pole asynchronous motor with external rotor and centrifugal impeller with forward curved blades.
- Iso Box-F V2** series: two-speed asynchronous motor with external rotor and centrifugal impeller with forward curved blades.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.
- Dynamically balanced turbine.

Speed control

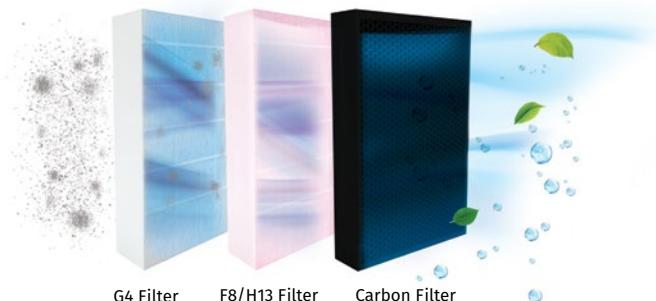

- Iso Box-F** series: Smooth speed control with an external CDT E1.8 thyristor controller (available upon separate order).
- Iso Box-F V2** series: Two-speed control with the external CDP-2/10 speed switch (available upon separate order).

Mounting

- Due to compact design is the ideal solution for mounting in limited spaces, including the space behind false ceiling.
- Any mounting position.
- Wall or ceiling mounting with fixing brackets supplied as a standard.

Air filtration

- Built-in filters provide efficient air filtration. Up to three filters can be installed into the fan.
- G4 filter provides primary filtration. At the second stage, the secondary filter F8 or HEPA filter H13 can be installed. F8 filter arrests up to 98 % of PM 2.5 dust particles. H13 filter arrest up to 99 % of PM2.5 dust particles, pollen and bacteria. For additional removal of odors and gases carbon filter can be installed.
- Quick access to replaceable filters through service panel.

Iso Box-F ES (V2)

Sound-insulated centrifugal fans with filters

Use

- Supply ventilation systems installed in premises with high requirements to clean air and the noise level.
- Compatible with Ø100 up to 200 mm round air ducts.
- Suitable for limited mounting space.

Air flow:
up to 645 m³/h
179 l/s

Power:
from 34 W

Noise level:
from 14 dBA

Design

- The casing is made of polymer-coated steel, internally filled with sound-insulating layer.
- Internal airtight terminal box for power supply.
- Easy access for filter maintenance.

Motor

- Iso Box-F ES** series: four-pole asynchronous motor with external rotor and centrifugal impeller with forward curved blades.
- Iso Box-F ES V2** series: two-speed asynchronous motor with external rotor and centrifugal impeller with forward curved blades.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.
- Dynamically balanced turbine.

Speed control

- Iso Box-F ES** series: smooth speed control with an external CDT E1.8 thyristor controller (available upon separate order).
- Iso Box-F ES V2** series: two-speed control with the external CDP-2/10 speed switch (available upon separate order).

Mounting

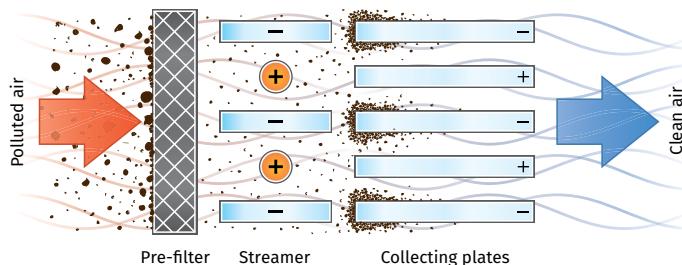

- Due to compact design is the ideal solution for mounting in limited spaces, including the space behind false ceiling.
- Any mounting position.
- Wall or ceiling mounting with fixing brackets supplied as a standard.

Air filtration

- G4 filter provides primary filtration.
- Fine filtering with an electrostatic filter.
- Quick access to replaceable filters through service panel.

Electrostatic filter

- Electrostatic filter enables purification of air from fine dust and soot, spray, smoke and other particles with the size 0.01 microns and less.
- Max. filter cleaning efficiency 98%.
- The electrostatic filters rely on gravity of oppositely charged objects.
- The polluted air stream flows through the spray charging unit for the particles ionization.
- Ionized particles are moved by the airstream and accumulated on the collecting plates which are oppositely charged.

- The filter cleaning interval depends on the inlet air pollution density and may vary from 7 up to 21 days.
- The filter cleaning interval is determined by the visual inspection of the filters.
- Vacuum cleaning is allowed.

Iso

Sound-insulated centrifugal fans

Use

- Supply and extract ventilation systems installed in premises with high requirements to the noise level.
- Compatible with Ø100 up to 315 mm round air ducts.

Air flow:
up to 2140 m³/h
594 l/s

Power:
from 110 W

Noise level:
from 29 dBA

Design

- Aluzinc casing internally filled with thermal and sound-insulating layer of foamed polystyrene.
- The connection spigots are equipped with rubber seals.
- The fan is equipped with a power cord for standard size 100-250 or a terminal block for standard size 315.

Motor

- Two- or four-pole asynchronous motor with external rotor and centrifugal impeller with forward curved blades.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.
- Dynamically balanced turbine.

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

- Fixed to wall or ceiling with a fixing bracket supplied as a standard.
- Flexible air ducts are fixed on the fan spigots with clamps.

Modifications and options

- FR:** built-in smooth speed controller adjustable from 0 to 100 %. The fan is supplied with a pre-wired cable with IEC plug as a standard.
- FR1:** built-in smooth speed controller adjustable from 0 to 100 %. The fan is supplied with a pre-wired cable with a standard electric plug.
- G:** temperature and speed controller with external temperature sensor fixed on 4 m cable. The fan is equipped with a power cord with a socket or a plug (**G1**).
- GI:** temperature and speed controller with a sensor built into the fan casing. The fan is equipped with a power cord with a socket or plug (**GI1**). G and GI options are used for automatic speed control depending on indoor temperature. The best ventilation solution for the premises requiring permanent temperature control as greenhouses, orangeries, etc.
- W:** the fan is equipped with a power cord and a socket or plug (**W1**).

Iso-B

Sound-insulated centrifugal fans

Use

- Supply and extract ventilation systems installed in premises with high requirements to the noise level.
- Compatible with Ø100 up to 315 mm round air ducts.
- Suitable for limited mounting space.

Air flow:
up to 2150 m³/h
597 l/s

Power:
from 72 W

Noise level:
from 33 dBA

Design

- Galvanized steel casing internally filled with 30 mm thermal- and sound-insulating layer made of non-flammable foamed polyurethane.
- The connection spigots are equipped with rubber seals.
- Fixing brackets for easy mounting.

Motor

- Two-pole external rotor asynchronous motor with centrifugal impeller and backward curved blades.
- The motor is installed on specially designed vibration-damping mounts to absorb vibration and noise.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.
- Dynamically balanced turbine.

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

- Fixed to wall or ceiling with a fixing bracket supplied as a standard.
- Flexible air ducts are fixed on the fan spigots with clamps.
- Power is supplied through an external terminal box.

Modifications and options

- G:** temperature and speed controller with external temperature sensor fixed on 4 m cable. The fan is equipped with a power cord with a socket or a plug (**G1**).
- GI:** temperature and speed controller with a sensor built into the fan casing. The fan is equipped with a power cord with a socket or plug (**GI1**). G and GI options are used for automatic speed control depending on indoor temperature. The best ventilation solution for the premises requiring permanent temperature control as greenhouses, orangeries, etc.
- W:** the fan is equipped with a power cord and a socket or plug (**W1**).
- max:** high-powered motor.

Iso-V

Sound-insulated centrifugal fans

Use

- Supply and extract ventilation systems installed in premises with high requirements to the noise level.
- Various application possibilities due to a special transformable casing design.
- Suitable for use as separate components of air handling systems.
- Compatible with Ø355 up to 710 mm round or 500x500 up to 1000x1000 mm rectangular air ducts.

Air flow:
up to 16870 m³/h
4686 l/s

Power:
from 230 W

Noise level:
from 47 dBA

Design

- Casing made of aluminium frame and removable aluzinc thermal- and sound-insulated double-skinned sandwich panels.
- Casing internally filled with 20 mm non-flammable mineral wool.
- Position of the removable panels can be adjusted to inline air flow or 90° angle air flow.
- Due to corrosion-resistant casing and thermal insulation the fan is suitable for external mounting.
- Square to square vibration absorbing connectors (**AKV** series) or square to round connector-reducers (**ARV** series) may be connected to the fan (available upon separate order).
- The round spigot of the **ARV** connector-reducer is rubber sealed for air tight connection.

Motor

- Two-, four- or six-pole asynchronous motor with external rotor and centrifugal impeller with backward curved blades.
- Single-phase (**E**) or three-phase (**D**) motor modifications.
- Equipped with ball bearings for longer service life.
- Overheating protection by built-in thermal switches with leaded outside terminals for connection to external protecting controls.
- The thermal switch terminal leads are designed for connection to respective circuit of the overload relay or respective terminals of the autotransformer or thyristor speed controller.
- The model **Iso-V 355 4E** incorporates thermal switches with automatic restart.
- Dynamically balanced turbine.

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

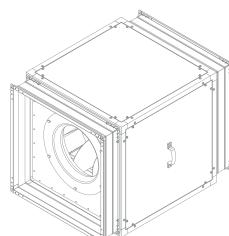

Mounting

The fan is mounted with rectangular or round air ducts.

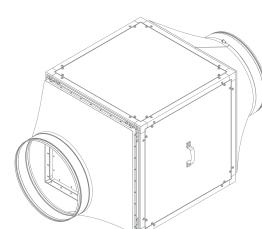

- Connected to air ducts with flexible vibration-absorbing connectors or connecting reducers of respective diameters.
- Power is supplied to the fan through an external terminal box.
- The fans can be installed in any mounting position with respect to air flow direction in the system. While mounting provide enough servicing space.
- In case of outdoor mounting the fan may be equipped with the upper protecting cover (**RSD-IV** series) or the outer hood (**AH-IV** series) to be installed at air inlet/outlet.

Modifications and options

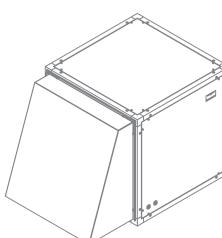

- max:** high-powered motor.

Iso-V EC

Sound-insulated fans with EC motor

Use

- Supply and extract ventilation systems installed in premises with high requirements to the noise level.
- A perfect solution for various ventilation system configurations due to a special transformable casing design.
- Suitable for use as a component of a modular air handling unit.
- For arranging energy-saving and controllable ventilation systems.
- Compatible with Ø315 up to 630 mm round air ducts or 500x500 up to 800x800 mm rectangular air ducts.

Air flow:
up to 16740 m³/h
4650 l/s

Power:
from 150 W

Noise level:
from 35 dBA

Design

- Casing made of aluminium frame and removable aluzinc thermal and sound-insulated double-skinned sandwich panels.
- Casing internally filled with 20 mm non-flammable mineral wool.
- Position of the removable panels can be adjusted to inline air flow or 90° angle air flow.
- Due to corrosion-resistant and thermally insulated casing the fan is suitable for external use.
- The fan is compatible with square to square vibration absorbing connectors (**AKV** series) or square to round connector-reducers (**ARV** series), both available upon separate order.
- The round spigot of the **ARV** connector-reducer is rubber sealed for air tight connection.

Motor

- High-efficient direct current EC motor with external rotor and backward curved blades.
- EC technologies meet the latest requirements to arrange high-efficient energy saving ventilation.
- Equipped with ball bearings for longer service life.
- Overheating protection by built-in thermal switches with automatic restart.
- Dynamically balanced turbine.

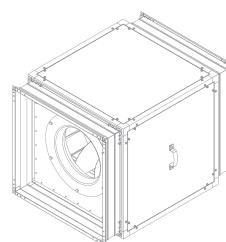

Operation and speed control

- The fan is controlled with a 0-10 V external control signal, e.g. CDTE/0-10 speed controller for EC motors.
- The fan capacity is regulated by various parameters, including temperature level, pressure, smoke, etc.
- EC motor changes its rotation speed synchronously with the fluctuation of the control parameter to ensure the best suitable air flow.
- The fan is compatible with 50 and 60 Hz power mains with the same maximum speed.

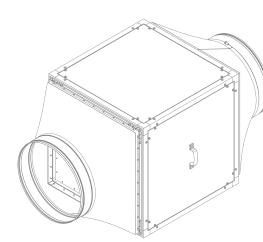

- The parameters may be set and controlled due to data exchange between a PC and the fan.
- The fans can be integrated into a unified decentralized computerized network to adjust ventilation system with respect to specific user's demands.

Mounting

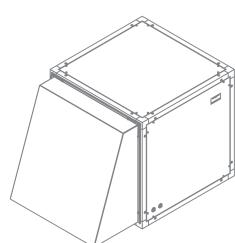

- Compatible both with square and round air ducts.
- Connection to air ducts through flexible vibration absorbing connectors or connector-reducers of a matching section.
- External terminal box for connection to power mains.
- Mounting in any position in compliance with the air flow direction. Maintenance space must be provided.
- In case of outdoor mounting the fan may be equipped with the upper protecting cover (**RSD-IV** series) or the outer hood (**AH-IV** series) to be installed at air inlet/outlet.

Iso-ZS

Sound-insulated centrifugal fans

Use

- Supply and extract ventilation systems installed in premises with high requirements to the noise level.
- Compatible with Ø250 or 315 mm round air ducts.

Air flow:
up to 3930 m³/h
1092 l/s

Power:
from 120 W

Noise level:
from 40 dBA

Design

- Galvanized steel casing internally filled with 30 mm thermal- and sound-insulating layer made of non-flammable foamed polyurethane.
- The connection spigots are equipped with rubber seals.
- External terminal block for power supply.
- Lifting lugs facilitate hanging and transportation operations.
- Modifications with two Ø250 mm suction spigots are available specifically for multi-port ventilation solutions (**Iso-ZS 315/2x250**).

Motor

- Four- or six-pole asynchronous motor with external rotor and double intake centrifugal impeller with forward curved blades.
- The motor is installed on specially designed vibration-damping mounts to absorb vibration and noise.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.
- Dynamically balanced turbine.

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

- Mounted with round air ducts.
- Suitable for installation in any mounting position with respect to air flow direction in the system, fixed with supports or brackets.
- Suspended to ceiling with mounting lugs.
- Flexible air ducts are fixed on the fan spigots with clamps.

Accessories

Silencer	Panel filter	Pocket filter	Electric heater	Water heater	Backdraft air damper	Air damper	Speed controller	Timer / Sensor

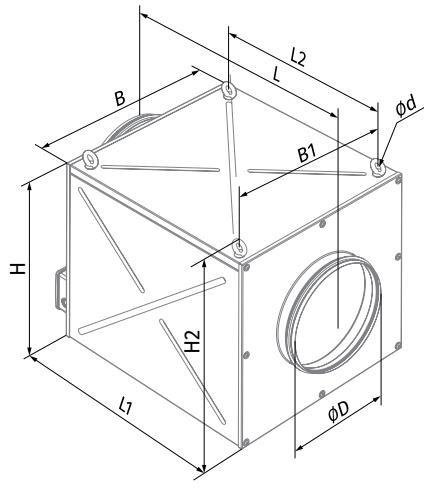

Modifications and options

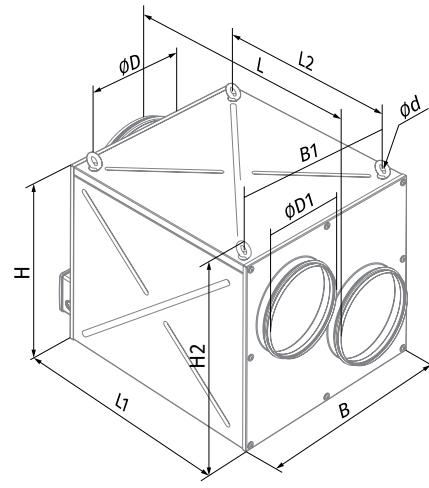

- **G:** temperature and speed controller with external temperature sensor fixed on 4 m cable.
- **GI:** temperature and speed controller with a sensor built into the fan casing.
- G and GI options are used for automatic speed control depending on indoor temperature. The best ventilation solution for the premises requiring permanent temperature control as greenhouses, orangeries, etc.
- **W:** the fan is equipped with a power cord and a socket or plug (W1).
- **max:** high-powered motor.

Iso-K

Sound-insulated fans

Use

- Hot and highly polluted air extract up to +110 (+120 °C within 60 min) in high resistance condition.
- Extract systems installed in kitchens of various types.
- Ventilation for baking halls.
- Welding gas extract.
- The fans are available for round air ducts Ø200, 250, 315, 355, 400, 450 mm.

Air flow:
up to 8138 m³/h
2261 l/s

Power:
from 180 W

Noise level:
from 41 dBA

Design

- Galvanized steel casing internally filled with 50 mm thermal- and sound-insulating layer made of non-flammable mineral wool.
- The fan casing is installed on a supporting mounting frame with integrated vibration isolators.
- The swivel motor-impeller block is attached to the swivel door which facilitates the fan servicing.

Helix

Centrifugal fans

Use

- Supply and extract ventilation systems installed in various premises.
- Suitable for use as ventilation or air conditioning system components.
- Compatible with round and rectangular air ducts.

Air flow:
up to 2000 m³/h
556 l/s

Power:
from 125 W

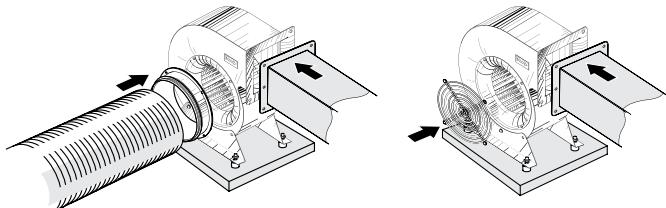

Noise level:
from 62 dBA

Design

- Compact scroll casing is made of steel and is covered with a special polymer coating.
- The fan is equipped with a round intake flange and exhaust rectangular flange for connection to respective air ducts.
- External terminal block for power supply.
- The fans are equipped with fixing brackets to facilitate fastening at any level surface.

- In case of rectangular discharge air duct connection a discharge vent must be covered with the **SG-H** grille to protect the fan from foreign object ingress. Available upon separate order.

Motor

- Two- or four-pole asynchronous motor with external rotor and centrifugal impeller with forward curved blades.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.
- Dynamically balanced turbine.

- The vibration isolators, either of rubber type **SI-G** are recommended for noise and vibration attenuation. Vibration isolators reduce dynamic loads on the fan, enhance reliability and durability of the ventilation equipment. The vibration isolators are attached through holes in the mounting pad. Available upon separate order.

SI-G

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

- Power is supplied to the fan through an external terminal box with sealed electric lead-in.

Mounting

- The fan is designed for installation as a single unit or as a component unit of ventilation chambers or air conditioning units.
- The fan has a connection possibility for two air ducts, a rectangular discharge air duct through the flange on the casing as well as a round intake air duct through the connecting flange **FRZ-H**. Available upon separate order.

S-Vent

Centrifugal fans

Use

- Extract ventilation systems installed in various premises.
- Suitable for use as a component of an assembled air handling or conditioning unit.
- Compatible with Ø140 up to 500 mm round air ducts or 125x125 up to 800x800 mm rectangular air ducts.

Air flow:
up to 19000 m³/h
5278 l/s

Power:
from 250 W

Noise level:
from 60 dBA

Design

- Scroll casing is made of steel and is covered with a special polymer coating.
- The fan is equipped with a round intake flange and exhaust rectangular flange for connection to respective air ducts.
- The fan casing design provides several impellers rotating positions rightwards (R) or leftwards (L) with 45° pitch angle.
- The casing includes mounting brackets with a mount pad for to facilitate the fan installation to an even surface.

Motor

- 2-, 4-, 6- or 8-pole three-phase asynchronous motor with centrifugal impeller and forward curved blades.
- Galvanized steel impeller.
- Equipped with ball bearings for longer service life.
- Dynamically balanced turbine.
- IP54 ingress protection rating.

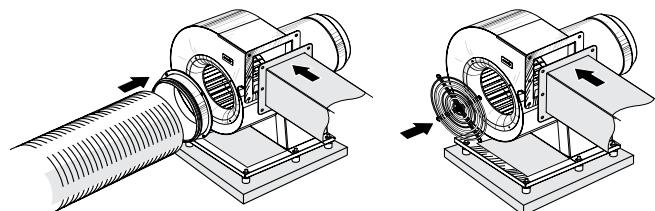

Speed control

- Smooth or step-up speed control with an external auto transformer or frequency inverter (both available upon separate order).

Mounting

- The fan is designed for installation as a single unit or as a component unit of ventilation chambers or air conditioning units.
- The fan has a connection possibility for two air ducts, a rectangular discharge air duct through the flange on the casing as well as a round intake air duct through the connecting flange **FRZ-SV**. Available upon separate order.
- In case of rectangular discharge air duct connection a discharge vent must be covered with the **SG-SV** grille to protect the fan from foreign object ingress. Available upon separate order.

- The vibration isolators, either of rubber type **SI-G** or spring-loaded type **SI-F**, are recommended for noise and vibration attenuation. Vibration isolators reduce dynamic loads on the fan, enhance reliability and durability of the ventilation equipment. The vibration isolators are attached through holes in the mounting pad. Available upon separate order.

Tubo-M / Tubo-MZ

Axial inline fans

Use

- Supply and extract ventilation systems installed in various premises.
- Mounting in ventilation systems with low static pressure requiring high air capacity.
- Compatible with Ø100 up to 315 mm round air ducts.

Air flow:
up to 1700 m³/h
472 l/s

Power:
from 26 W

Noise level:
from 31 dBA

Design

- Compact steel casing covered with special polymer coating (Tubo-M series) or galvanized steel casing (Tubo-MZ series).
- Aluminium impeller.
- The fan is equipped with a power cord and external terminal block for connection to power mains.

Motor

- Single-phase asynchronous external rotor motor with axial impeller.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

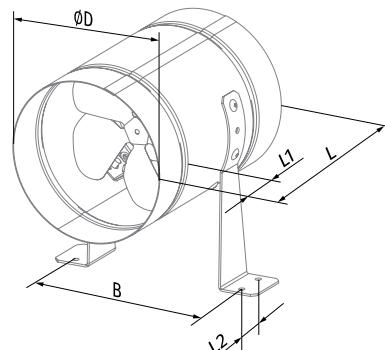

- Mounting in air duct or directly to the wall in any position with respect to air flow direction in the system.
- Power is supplied to the fan through an external terminal box with sealed electric lead-in.
- Wall or ceiling mounting with fixing brackets supplied as a standard.
- Polymer coated or galvanized steel reducers are provided for connection of the Tubo-M fans with Ø150 up to 250 mm air ducts. The reducers are not included into delivery list and are available upon separate order.
- Tubo-M 315** and **Tubo-MZ 315** with Ø315 mm air ducts have direct connection.

Axis-F

Axial inline fans

Use

- Supply and extract ventilation systems installed in various premises.
- Ideal solution for boosting large air volumes at low aerodynamic resistance in the ventilation system.

Air flow:
up to 12100 m³/h
3361 l/s

Power:
from 50 W

Noise level:
from 50 dBA

Design

- Compact steel casing and impeller with a special polymer coating.
- Casing is equipped with connecting flanges for easy mounting into air duct.
- The fan is equipped with a terminal block for connection to power mains.

Motor

- Two- or four-pole asynchronous motor with external rotor and axial impeller.
- Single-phase (**E**) or three-phase (**D**) motor modifications.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.

Accessories

Flexible antivibration connector Speed controller

EVAF

CDT E1.8

Speed control

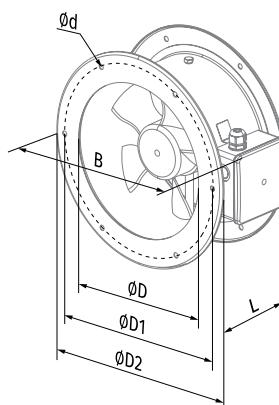

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

- The fan is installed in air ducts by connecting flanges on the fan casing.
- Mounting in any position with respect to air flow direction in the system.
- Power is supplied through an external terminal box.

Axis-Q

Axial wall fans

Use

- Supply and extract ventilation systems installed in various premises.
- Ideal solution for boosting large air volumes at low aerodynamic resistance in the ventilation system.
- Refrigerating technologies for cooling of compressor condensing units.
- Direct air extract .
- For positive pressure ventilation in fire-fighting systems.

Air flow:
up to 12400 m³/h
3445 l/s

Power:
from 50 W

Noise level:
from 50 dBA

Design

- Steel casing and impeller with a special polymer atmospheric resistant coating.
- Casing is equipped with a square mounting plate and a round flange to facilitate wall mounting.
- The fan is equipped with a terminal box for connection to power mains.

Motor

- Two- or four-pole asynchronous motor with external rotor and axial impeller.
- Single-phase (**E**) or three-phase (**D**) motor modifications.
- Equipped with ball bearings for longer service life.
- Integrated overheating protection with automatic restart.

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

- Wall surface mounting with a square connecting frame.
- Any mounting position with respect to air flow direction in the system.
- Power is supplied through an external terminal box.

Axis-QR

Axial wall fans

Use

- Supply and extract ventilation systems installed in various premises.
- Ideal solution for boosting large air volumes at low aerodynamic resistance in the ventilation system.
- Refrigerating technologies for cooling of compressor condensing units.
- Direct air extract .
- For positive pressure ventilation in fire-fighting systems.

Air flow:
up to 12400 m³/h
3445 l/s

Power:
from 50 W

Noise level:
from 50 dBA

Design

- Steel casing and impeller with a special polymer atmospheric resistant coating.
- Casing is equipped with a round mounting plate and a round flange to facilitate wall mounting.
- The fan is equipped with a terminal box for connection to power mains.

Motor

- Two- or four-pole asynchronous motor with external rotor and axial impeller.
- Single-phase (**E**) or three-phase (**D**) motor modifications.
- Equipped with ball bearings for longer service life.
- Integrated overheating protection with automatic restart.

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

- Wall surface mounting with a round connecting frame.
- Any mounting position with respect to air flow direction in the system.
- Power is supplied through an external terminal box.

Designation key

Axis-QA

Axial wall fans

Use

- Supply and extract ventilation systems installed in various premises.
- Mounting in ventilation systems with low static pressure requiring high air capacity.
- Direct air extract.

Air flow:
up to 1700 m³/h
472 l/s

Power:
from 26 W

Noise level:
from 31 dBA

Design

- Compact steel casing covered with special polymer coating.
- Aluminium impeller.
- The casing is equipped with a square mounting plate and flange for easy surface wall mounting.
- The fan is equipped with a power cord and external terminal box for connection to power mains.

Motor

- Single-phase asynchronous motor with an internal rotor and an axial impeller.
- Motor with slide bearings.
- Integrated overheating protection with automatic restart.

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

- Wall surface mounting with a square connecting frame.
- Horizontal installation with respect to air flow direction in the system.
- Power supply through an external terminal box with electric lead-in.

Tower-V

Centrifugal roof fans

Use

- Extract ventilation systems installed in various premises.
- Roof mounting.
- For any types of roofs or vertical ventilation shafts.

Air flow:
up to 5130 m³/h
1306 l/s

Power:
from 85 W

Noise level:
from 45 dBA

Design

- Steel casing with a special polymer atmospheric resistant coating.
- Vertical air exhaust.
- The fan is equipped with a terminal block for connection to power mains.
- The fan is rated for continuous operation.
- The upper cover is equipped with two eye bolts for easy fan lifting on the roof with hoisting mechanism.
- A connecting plate with an intake opening is designed to facilitate mounting to the roof surface.

Motor

- Two-, four- or six-pole asynchronous motor with external rotor and centrifugal impeller with backward curved blades.
- Single-phase (**E**) or three-phase (**D**) motor modifications.
- Dynamically balanced turbine.
- Equipped with ball bearings for longer service life.
- Overheating protection with built-in thermal switches with automatic restart or with leaded outside terminals for connection to external protecting controls.
- The thermal switch terminal leads are designed for connection to respective circuit of the overload relay or respective terminals of the autotransformer or thyristor speed controller.

Speed control

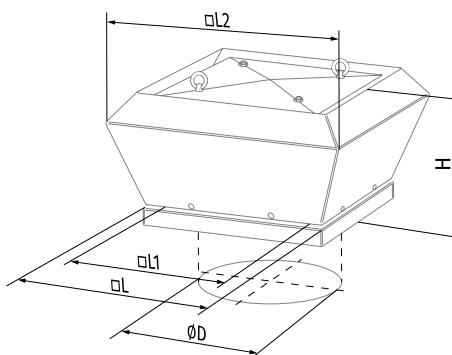

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

- Roof mounting directly above a ventilation shaft or air duct.
- The fan is connected to the air duct with the intake flange that is fixed to the fan base.
- The fan base has holes for fixing bolts that attach the fan to a stable level surface or a roof frame.
- Roof frame and intake flange available on separate order.
- Power is supplied through an external terminal box.

Tower-V EC

Roof centrifugal fans with EC motor

Use

- Extract ventilation systems installed in various premises.
- Roof mounting.
- Any roof types or vertical ventilation shafts.
- For arranging energy-saving and controllable ventilation systems.

Air flow:
up to 11400 m³/h
3167 l/s

Power:
from 455 W

Noise level:
from 47 dBA

Design

- The casing is made of steel with a polymer atmospheric resistant coating.
- Vertical air exhaust.
- The fan is equipped with a terminal box for connection to power mains.
- The fan is rated for continuous operation always connected to power mains.
- The upper cover is equipped with two eye bolts for easy fan lifting on the roof with hoisting mechanism.
- A connecting plate is provided to facilitate mounting to the roof surface or to the mounting frame.

- EC motor changes its rotation speed synchronously with the fluctuation of the control parameter to ensure the best suitable air flow.
- The fan is compatible both with 50 and 60 Hz power mains with no influence to the motor maximum speed.
- The parameters may be set and controlled due to data exchange between a PC and the fan.
- The fans can be integrated into a unified decentralized computerized network to adjust ventilation system with respect to specific user's demands.

Motor

- High-efficient direct current EC motor with external rotor and backward curved blades.
- EC technologies meet the latest requirements to arrange high-efficient energy saving ventilation.
- EC motors have energy demand by 50 % less as compared to standard motors and have efficiency up to 90 %.
- EC motors are featured with high performance, low noise level and well controllable total speed range.
- Overheating protection by built-in thermal switches with automatic restart.
- Dynamically balanced turbine.

Mounting

- Roof mounting directly above a ventilation shaft or an air duct.
- The fan is attached to a square air duct or to the **MRDL/MRIDL** mounting frame (see accessories).
- The counterflange **FDL** mounted on the fan bottom (see accessories) is designed for the fan connection to a round air duct.
- The KDL backdraft dampers (see Accessories) are designed to prevent air back drafting when the fan is off.
- The VDL flexible connectors (see Accessories) are designed to absorb vibration from the fan to the air duct.
- External terminal box for connection to power mains.

Operation and speed control

- The fan is controlled with a 0-10 V external control signal, e.g. **CDT E/0-10** speed controller for EC motors.
- The fan capacity is regulated by various parameters, including temperature level, pressure, smoke, etc.

Tower-H

Centrifugal roof fans

Use

- Extract ventilation systems installed in various premises.
- Roof mounting.
- For any types of roofs or vertical ventilation shafts.

Air flow:
up to 5130 m³/h
1306 l/s

Power:
from 85 W

Noise level:
from 45 dBA

Design

- Steel casing with a special polymer atmospheric resistant coating.
- Horizontal air exhaust.
- The fan is equipped with a terminal block for connection to power mains.
- The fan is rated for continuous operation.
- Impeller with a protecting insect screen.
- The upper cover is equipped with two eye bolts for easy fan lifting on the roof with hoisting mechanism.
- A connecting plate with an intake opening is designed to facilitate mounting to the roof surface.

Motor

- Two-, four- or six-pole asynchronous motor with external rotor and centrifugal impeller with backward curved blades.
- Single-phase (E) or three-phase (D) motor modifications.
- Dynamically balanced turbine.
- Equipped with ball bearings for longer service life.
- Overheating protection by built-in thermal switches with leaded outside terminals for connection to external protecting controls.
- The thermal switch terminal leads are designed for connection to respective circuit of the overload relay or respective terminals of the autotransformer or thyristor speed controller.

Speed control

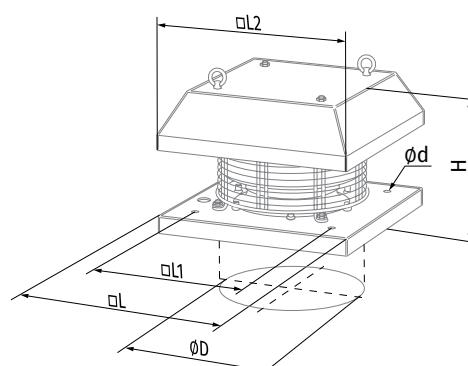

- Smooth or step speed control with a thyristor or transformer speed controller (available upon order).

Mounting

- Roof mounting directly above a ventilation shaft or air duct.
- The fan is connected to the air duct with the intake flange that is fixed to the fan base.
- The fan base has holes for fixing bolts that attach the fan to the stable level surface or a roof frame.
- Roof frame and intake flange available on separate order.
- Power is supplied through an external terminal box.

Tower-H EC

Roof centrifugal fans with EC motor

Use

- Extract ventilation systems installed in various premises.
- Roof mounting.
- Any roof types or vertical ventilation shafts.
- For arranging energy-saving and controllable ventilation systems.

Air flow:
up to 11400 m³/h
3167 l/s

Power:
from 455 W

Noise level:
from 47 dBA

Design

- The casing is made of steel with a polymer atmospheric resistant coating.
- Horizontal air exhaust.
- The fan is equipped with a terminal box for connection to power mains.
- The fan is rated for continuous operation always connected to power mains.
- The impeller has a protecting grille.
- The upper cover is equipped with two eye bolts for easy fan lifting on the roof with hoisting mechanism.
- A connecting plate is provided to facilitate mounting to the roof surface or to the mounting frame.

- The fan capacity is regulated by various parameters, including temperature level, pressure, smoke, etc.
- EC motor changes its rotation speed synchronously with the fluctuation of the control parameter to ensure the best suitable air flow.
- The fan is compatible with 50 and 60 Hz power mains with the same maximum speed.
- The parameters may be set and controlled due to data exchange between a PC and the fan.
- The fans can be integrated into a unified decentralized computerized network to adjust ventilation system with respect to specific user's demands.

Motor

- High-efficient direct current EC motor with external rotor and backward curved blades.
- EC technologies meet the latest requirements to arrange high-efficient energy saving ventilation.
- EC motors have energy demand by 50 % less as compared to standard motors and have efficiency up to 90 %.
- EC motors are featured with high performance, low noise level and well controllable total speed range.
- Overheating protection by built-in thermal switches with automatic restart.
- Dynamically balanced turbine.

Mounting

- Roof mounting directly above a ventilation shaft or an air duct.
- The fan is attached to a square air duct or to the **MRDL/MRIDL** mounting frame (see accessories).
- The counterflange **FDL** mounted on the fan bottom (see accessories) is designed for the fan connection to a round air duct.
- The KDL backdraft dampers (see Accessories) are designed to prevent air back drafting when the fan is off.
- The VDL flexible connectors (see Accessories) are designed to absorb vibration from the fan to the air duct.
- External terminal box for connection to power mains.

Operation and speed control

- The fan is controlled with a 0-10 V external control signal, e.g. **CDT E/0-10** speed controller for EC motors.

Tower-AM

Centrifugal roof fans

Use

- Extract ventilation systems installed in various premises.
- Roof mounting.
- For any types of roofs or vertical ventilation shafts.
- Compatible with Ø150 up to 315 mm round air ducts.

Air flow:
up to 1920 m³/h
533 l/s

Power:
from 98 W

Noise level:
from 47 dBA

Design

- Steel casing with a special polymer atmospheric resistant coating.
- Horizontal air exhaust.
- The fan is rated for continuous operation.
- A connecting plate is designed to facilitate the fan mounting to the roof surface.

Motor

- Single-phase external rotor motor and centrifugal impeller with backward curved blades.
- Dynamically balanced turbine.
- Equipped with ball bearings for longer service life.
- Overheating protection with built-in thermal switches with automatic restart.

Speed control

- Smooth or step speed control with an external thyristor controller or an external auto transformer (both available upon separate order).

Mounting

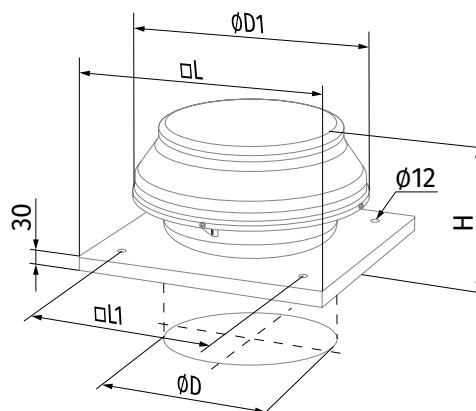

- Roof mounting directly above a ventilation shaft or air duct.
- The fan is connected to the air duct with the intake flange that is fixed to the fan base.
- The fan base is perforated for fixing bolts that attach the fan to a stable level surface or a roof frame.
- Roof frame, intake flange and fixing bolts are available on separate order.
- Power is supplied through an external terminal box.

Axial roof fans

Use

- Extract ventilation systems installed in various premises.
- Roof mounting.
- For any types of roofs or vertical ventilation shafts.

Air flow:
up to 2650 m³/h
736 l/s

Power:
from 50 W

Noise level:
from 50 dBA

Design

- Steel casing and impeller with a special polymer atmospheric resistant coating.
- Horizontal air exhaust.
- The fan is equipped with a terminal block for connection to power mains.
- The fan is rated for continuous operation.
- A connecting plate with an intake opening is designed to facilitate mounting to the roof surface.

Motor

- Two- or four-pole asynchronous motor with external rotor and axial impeller.
- Single-phase (E) motor modification.
- Equipped with ball bearings for longer service life.
- Overheating protection by built-in thermal switches with automatic restart.

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

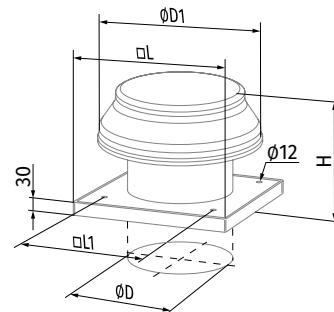

- Roof mounting directly above a ventilation shaft or air duct.
- The fan is connected to the air duct with the intake flange that is fixed to the fan base.
- The fan base has holes for fixing bolts that attach the fan to a stable level surface or a roof frame.
- Roof frame and intake flange available on separate order.
- Power is supplied through an external terminal box.

Tower-AL

Axial roof fans

Use

- Extract ventilation systems installed in various premises.
- Roof mounting.
- For any types of roofs or vertical ventilation shafts.

Air flow:
up to 1700 m³/h
472 l/s

Power:
from 43 W

Noise level:
from 32 dBA

Design

- Steel casing with a special polymer atmospheric resistant coating.
- Aluminium impeller.
- Horizontal air exhaust.
- The fan is equipped with a terminal block for connection to power mains.
- The fan is rated for continuous operation.
- A connecting plate with an intake opening is designed to facilitate mounting to the roof surface.

Mounting

- Roof mounting directly above a ventilation shaft or air duct.
- The fan is connected to the air duct with the intake flange that is fixed to the fan base.
- The fan base has holes for fixing bolts that attach the fan to a stable level surface or a roof frame.
- Roof frame and intake flange available on separate order.
- Power is supplied through an external terminal box.

Motor

- Single-phase asynchronous external rotor motor with axial impeller.
- Equipped with ball bearings for longer service life.
- Overheating protection by built-in thermal switches with automatic restart.

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Box

Centrifugal fans for rectangular ducts

Use

- Supply and exhaust ventilation systems installed in various premises.
- Compatible with 400x200 up to 600x350 mm rectangular air ducts.

Air flow:
up to 2970 m³/h
825 l/s

Power:
from 136 W

Noise level:
from 53 dBA

Design

- Atmospheric resistant galvanized steel casing and impeller.
- The fan is rated for continuous operation.
- Fitted with standard 20 mm connecting flanges for connection to rectangular air ducts.
- Access cover on the casing for inspection and maintenance operations.
- The fan is equipped with a built-in terminal box with a leaded outside sealed electrical lead-in for connection to power mains.

Motor

- Two- or four-pole asynchronous motor with external rotor and centrifugal impeller with backward curved blades.
- Single-phase (**E**) or three-phase (**D**) motor modifications.
- Equipped with ball bearings for longer service life.
- Dynamically balanced turbine.
- Overheating protection by built-in thermal switches with automatic restart or with leaded outside terminals for connection to external protecting controls.
- The thermal switch terminal leads are designed for connection to respective circuit of the contactor, overload relay or respective terminals of the autotransformer or thyristor speed controller.

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

- The fan is designed for mounting inside rectangular air ducts and can be installed in any position.
- The fan flanges are connected to the air ducts through the bolts inserted into the flange holes.
- The fan is suitable for mounting into round duct at intake flange with a round reducer (available upon separate order).
- If vibration-absorbing flexible connectors are used to connect the fan to the air ducts provide their fixation to mounting structures with supports or brackets.
- While mounting provide enough space for accessing the cover for service operations.

Box-EC

Centrifugal fans with EC motor

Use

- Supply and extract ventilation systems installed in various premises.
- For arranging energy-saving and controllable ventilation systems.
- Compatible with 600x300 up to 1000x500 mm rectangular air ducts.

Air flow:
up to 10850 m³/h
3014 l/s

Power:
from 480 W

Noise level:
from 58 dBA

Design

- Atmospheric resistant galvanized steel casing and impeller.
- The fan is rated for continuous operation always connected to power mains.
- Fitted with standard 20 mm connecting flanges for connection to rectangular air ducts.
- Access cover on the casing for inspection and maintenance operations.

Motor

- High-efficient direct current EC motors with external rotor and impeller with backward curved blades.
- EC technologies meet the latest requirements to arrange high-efficient energy saving ventilation.
- EC motors have energy demand by 50 % less as compared to standards motors and have efficiency up to 90 %.
- EC motors are featured with high performance, low noise level and well controllable total speed range.
- Single-phase or three-phase motor modifications.
- Dynamically balanced turbine.

Speed control

- The fan is controlled with a 0-10 V external control signal, e.g. **CDT E/0-10** speed controller for EC motors.
- The fan air capacity is regulated by various parameters, including temperature level, pressure, smoke, etc.
- When a control parameter changes the EC motor changes its rotation speed to provide the best suitable air flow.
- The fan is compatible with 50 Hz and 60 Hz power mains with the same maximum speed.
- Data exchange between PC and fan for setting and control of operating parameters.
- The fans with EC motors can be integrated into a unified decentralized computerized network to adjust ventilation system with respect to specific user's demands.

Mounting

- The fan is designed for mounting inside rectangular air ducts and can be installed in any position.
- The fan flanges are connected to the air ducts through the bolts inserted into the flange holes.
- Suitable for mounting into round duct on intake flange with a round flange reducer (available upon separate order).
- If flexible vibration-absorbing connectors are used to connect the fan to the air ducts provide their fixation to mounting structures with supports or brackets.
- While mounting provide enough space for accessing the cover for service operations.

Box-I EC

Inline centrifugal fans with EC motor

Use

- Supply and extract ventilation systems installed in various premises.
- For arranging energy-saving and controllable ventilation systems.
- Compatible with 600x300 up to 1000x500 mm rectangular air ducts.

Air flow:
up to 10850 m³/h
3014 l/s

Power:
from 480 W

Noise level:
from 49 dBA

Design

- The casing and impeller are made of galvanized steel.
- The casing is heat- and sound-insulated with 50 mm mineral wool.
- The fan is rated for continuous operation always connected to power mains.
- The fan casing has threaded openings for connection of rectangular air ducts.
- The access cover on the fan casing facilitates servicing and maintenance.

- Mounting angles with rubber anti vibration mounts for easy fan mounting.

Motor

- High-efficient direct current EC motor with external rotor and backward curved blades.

- EC technologies meet the latest requirements to arrange high-efficient energy saving ventilation.
- EC motors have energy demand by 50 % less as compared to standard motors and have efficiency up to 90 %.
- EC motors are featured with high performance, low noise level and well controllable total speed range.
- Dynamically balanced turbine.

Operation and speed control

- The fan is controlled with a 0-10 V external control signal, e.g. CDT E/0-10 speed controller for EC motors.
- The fan capacity is regulated by various parameters, including temperature level, pressure, smoke, etc.
- EC motor changes its rotation speed synchronously with fluctuations of a control parameter to ensure the best suitable air flow.
- The fan is compatible both with 50 and 60 Hz power mains with no influence to the motor maximum speed.
- The parameters may be set and controlled due to data exchange between a PC and the fan.
- The fans can be integrated into a unified decentralized computerized network to adjust ventilation system with respect to specific user's demands.

Mounting

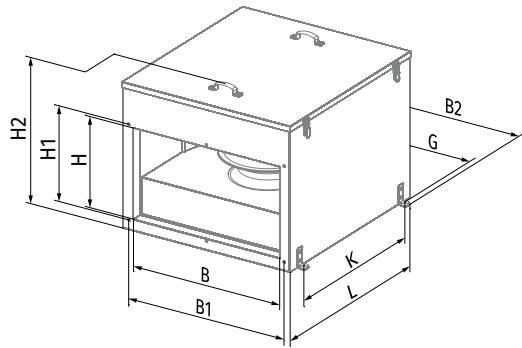

- For connection to rectangular air ducts.
- The fan flanges are connected to the air duct by the bolts inserted into the flange holes.
- In case of the fan connection to the air duct via flexible connectors the fan must be secured to a mounting frame with supports, hangers or brackets.
- While mounting provide enough space for accessing the cover for service operations.

Box-F

Centrifugal fans for rectangular ducts

Use

- Supply and extract ventilation systems installed in various premises.
- Compatible with 400x200 up to 1000x500 mm rectangular air ducts.

Air flow:
up to 9540 m³/h
2650 l/s

Power:
from 282 W

Noise level:
from 50 dBA

Design

- Atmospheric resistant galvanized steel casing and impeller.
- The fan is rated for continuous operation.
- Fitted with standard 20 mm connecting flanges for connection to rectangular air ducts.
- Access cover on the casing for inspection and maintenance operations.
- The fans with standard size from 40x20 up to 60x35 are equipped with a terminal block integrated into the casing with leaded outside sealed electrical lead-in for connection to power mains.
- The fans with standard size from 70x40 up to 100x50 are equipped with an external terminal block for connection to power mains.

Motor

- Four- or six-pole asynchronous motor with external rotor and centrifugal impeller with forward curved blades.
- Due to its turbine design the fan has excellent air dynamic characteristics (high performance and pressure drop).
- Single-phase (**E**) or three-phase (**D**) motor modifications.
- Equipped with ball bearings for longer service life.
- Dynamically balanced turbine.
- Overheating protection by built-in thermal switches with leaded outside terminals for connection to external protecting controls.
- The thermal switch terminal leads are designed for connection to respective circuit of the overload relay or respective terminals of the autotransformer or thyristor speed controller.

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

- The fan is designed for mounting inside rectangular air ducts and can be installed in any position.
- The fan flanges are connected to the air ducts through the bolts inserted into the flange holes.
- Mounting to a round air duct on exhaust flange through a round pipe reducer. Available upon order.
- If flexible vibration-absorbing connectors are used to connect the fan to the air ducts provide their fixation to mounting structures with supports or brackets.
- While mounting provide enough space for accessing the cover for service operations.

Kamin / Kamin-ER

Chimney centrifugal fans

Use

- For arranging warm air distribution system from chimney room to other rooms.
- For heating of occasionally or seasonally occupied buildings.
- Operating temperature from 0 to 150 °C.
- Compatible with Ø125 up to 160 mm round air ducts.

Air flow:
up to 740 m³/h
206 l/s

Power:
from 32 W

Noise level:
from 37 dBA

Design

- Atmospheric resistant galvanized steel casing and impeller.
- Thermal and heat-insulation with non-flammable mineral wool.
- The casing is perforated for internal air circulation for cooling the motor down.
- The casing has fixing for connection of extra options (filter, mixing chamber, bypass system).
- Power is supplied to the fan through an external terminal box with sealed electric lead-in.
- Switches on and off at set temperatures. Regulation by built-in temperature regulator.

Motor

- Single-phase asynchronous motor. Centrifugal impeller with forward curved blades.
- The Kamin-ER fan is equipped with an external rotor motor.
- The motor is placed off the air flow and is equipped with extra axial impeller for motor cooling and blowing off.
- Motor insulation class F.
- Equipped with ball bearings for longer service life.
- Dynamically balanced turbine.
- Overheating protection by built-in thermal switches with automatic restart.

Speed control

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).

Mounting

- Suitable for installation in any mounting position with respect to air flow direction in the system.
- Warm air distribution from the fan to other premises through the mounted air ducts.

Options

AF: metal filter-box for air purification. Filter class G3.

KF: metal mixing chamber for cold air supply. The chamber includes a temperature regulating damper and filter for air purification. The chamber provides cold air supply when the air temperature exceeds 90°C and hot air removal when the fan is off.

GF: gravity damper prevents air back draft into the system and together with mixing chamber KF provides by-pass motor overheating protection. When the fan is off, e.g. during power cut-off the gravity damper is closed and warm air is distributed through the mixing chamber and connected air ducts to other rooms.

Valeo

Mono-pipe ventilation exhaust centrifugal units

Use

- Extract ventilation systems installed in high-rise buildings and premises.
- For buildings with mono-pipe ventilation system.
- For mounting in kitchens and bathrooms.
- Installation in casing for flush or surface mounting.

Air flow:
up to 150 m³/h
42 l/s

Power:
from 12 W

Noise level:
from 27 dBA

Design

- The ventilation unit Valeo is designed for installation in a plastic or fire-proof casing.
- The front panel is made of snow-white UV-resistant plastic.
- Filter with filter class G4 for motor, impeller and ductwork system protection against soiling.
- The filter is easily accessible for service operations.
- The ventilation unit with motor is fixed inside the casing with special latches.
- Due to modern design and various colour modifications the front panel matches well with any interior.

Motor

- Two- or three-speed motor with centrifugal impeller. Minimum energy demand.
- Galvanized steel impeller with forward curved blades.
- Automatic maintaining of constant air flow depending on variable air resistance of the duct.
- Balanced turbine ensures low-noise operation.
- Best aerodynamic characteristics due to special scroll casing design.
- Ball bearings provide long service life.

Speed control

- Step speed control with an external speed controller, e.g. CDP-3/5 model which is available upon order.
- Wide range of system controls with programmable parameters (timer, adjustable timer, internal switch, photo sensor, humidity sensor).

Options for 2 speed units

○ Timer (Valeo...T)

Depending on wiring connection the fan is off or runs permanently at low speed. The fan is turned to higher speed with external switch 50 s after activation. After turning the switch off the fan continues operating within 6 min at higher speed and then reverts to default operation mode.

○ Adjustable timer (Valeo...TR)

Depending on wiring connection the fan is off or runs permanently at low speed. If the fan is turned on with an external switch it switches to higher speed 0 to 150 s after switch activation. After turning the fan off it continues running at higher speed within 2 to 30 minutes and then reverts to previous mode. The fan run-out time and delay time for higher speed are regulated with the internal regulator.

○ Interval switch (Valeo...I)

Depending on wiring connection the fan is off or runs permanently at low speed. In interval mode regulated from 0.5 to 15 hours the fan switches periodically to higher speed for 10 minutes. The switch interval is adjusted with the internal regulator. If light in the room is turned on the fan switches to higher speed in 50 s. After light is off the fan reverts to interval mode operation.

○ Photo sensor (Valeo...F)

Depending on wiring connection the fan is off or runs permanently at low speed. If light in the room is turned with the external switch the fan switches to higher speed in 50 s. After light is off the fan continues running at higher speed within 2 to 30 min and then reverts to default operating mode. The fan run-out time and delay time for higher speed are regulated with the internal regulator.

○ Humidity sensor (Valeo...H)

Depending on wiring connection the fan is off or runs permanently at low speed. The fan switches to higher speed as relative humidity in the room increases from 60 % up to 90 % and switches off as humidity drops by 10 % below set level. If light in the room is turned on the fan switches to higher speed in 50 s. The run-out time is set by the internal regulator from 2 to 30 minutes.

Mounting plastic casing for ventilation units Valeo

- BP 80:** plastic casing for flush mounting.
- Made of quality ABS plastic and equipped with a gravity backdraft damper.
- Installed in wall or ceiling during general construction works by mounting brackets supplied as a standard.
- The casing is equipped with oblong slotted joints to facilitate mounting.
- Connection to main ventilation shaft with flexible air ducts.
- Exhaust spigot diameter 80 mm.
- After installation works cover the unit with a protecting cover to prevent dirt ingress.
- After finishing works install the unit Valeo inside the casing.
- For exhaust ventilation of neighbour rooms extra spigots may be connected to the casing.

Mounting fireproof casing for the ventilation units Valeo

- **BF 80:** fireproof casing for flush mounting.
- Made of silicate plates based on calcium silicate and has high thermal insulating properties.
- Equipped with a fire-retarding damper to prevent fire and smoke expanding along air ducts. If temperature in the duct reaches 90°C the thermal fuse closes the damper.
- When the fan is off the fire-retarding damper serves as a backdraft damper.
- The fan casing is installed in wall or ceiling during general construction works by mounting brackets supplied as a standard.
- Connection to main ventilation shaft with flexible air ducts. Exhaust spigot diameter 80 mm.
- Power is supplied to the fan through a sealed electric lead-in on the casing.
- After installation works cover the unit with a protecting cover to prevent dirt ingress.
- After finishing works install the ventilation unit inside the casing and connect it to wiring system.
- For exhaust ventilation of neighbour rooms extra spigots may be connected to the casing on the left (**BFL** modification), on the right (**BFR** modification), on the bottom (**BFD** modification).

Design

- The fan consists of the plastic casing BP for flush mounting and exhaust ventilation unit Valeo with a flat front panel.
- The casing is made of durable ABS plastic and fitted with a gravity back-draft damper to prevent backdraft.

- The front panel is made of snow white UV-resistant plastic.
- G4 purifying durable filter protects the motor, impeller and ductwork system against soiling.
- The filter is easily accessible for service operations.
- Due to modern design and various colour modifications the front panel matches well with any interior.
- The casing is equipped with oblong slotted joints to facilitate mounting of the casing in true vertical position.

- If the casing is installed with some vertical deviations the special turnable grille conceals possible mounting inaccuracies.
- Power is supplied to the fan through a sealed electric lead-in on the casing and the ventilation unit is equipped with an airtight terminal block for connection to the wiring system.
- For room-to-room ventilation some ventilation unit modifications are equipped with extra spigots: **Valeo-BPL** – on the left; **Valeo-BPR** – on the right; **Valeo-BPD** – on the bottom.
- Ingress protection rating IP55.

Motor

- Two- or three-speed motor with centrifugal impeller. Minimum energy demand.
- Galvanized steel impeller with forward curved blades.
- Automatic maintaining of constant air flow depending on variable air resistance of the duct.
- Balanced impeller ensures low-noise operation.
- Best aerodynamic characteristics due to special scroll casing design.
- Ball bearings provide long service life.
- The ventilation unit with motor is fixed inside the casing with special latches.

Speed control

- Step speed control with an external speed controller, e.g. **CDP-3/5** model which is available upon order.
- Wide range of intellectual controls programmable by set parameters (timer, adjustable timer, internal switch, photo sensor, humidity sensor).

Clamp

Mounting

- Installed in wall or ceiling during general construction works by mounting brackets supplied as a standard.
- Connection to the main ventilation shaft with flexible air ducts.
- For exhaust ventilation of a neighbour room remove a plug and install an extra spigot. Available upon separate order.
- Exhaust spigot diameter 80 mm.
- Power is supplied to the fan through a sealed electric lead-in on the casing.
- After installation works cover the unit with a protecting cover to prevent dirt ingress.
- After finishing works install the ventilation unit inside the casing and connect it to wiring system.

Options for 2 speed fan models

○ Timer (Valeo-BP..T)

Depending on wiring connection the fan is off or runs permanently at low speed. The fan is turned to higher speed with external switch 50 s after activation. After turning the switch off the fan continues operating within 6 min at higher speed and then reverts to default operation mode.

○ Adjustable timer (Valeo-BP..TR)

Depending on wiring connection the fan is off or runs permanently at low speed. If the fan is turned on with an external switch it switches to higher speed 0 to 150 s after switch activation. After turning the fan off it continues

running at higher speed within 2 to 30 minutes and then reverts to previous mode. The fan run-out time and delay time for higher speed are regulated with the internal regulator.

○ Interval switch (Valeo-BP..I)

Depending on wiring connection the fan is off or runs permanently at low speed. In interval mode regulated from 0.5 to 15 hours the fan switches periodically to higher speed for 10 minutes. The switch interval is adjusted with the internal regulator. If light in the room is turned with the external switch the fan switches to higher speed in 50 s. After light is off the fan reverts to interval mode operation.

○ Photo sensor (Valeo-BP..F)

Depending on wiring connection the fan is off or runs permanently at low speed. If light in the room is turned with the external switch the fan switches to higher speed in 50 s. After light is off the fan continues running at higher speed within 2 to 30 min and then reverts to default operating mode. The fan run-out time and delay time for higher speed are regulated with the internal regulator.

○ Humidity sensor (Valeo-BP..H)

Depending on wiring connection the fan is off or runs permanently at low speed. The fan switches to higher speed as relative humidity in the room increases from 60 % up to 90 % and switches off as humidity drops by 10 % below set level. If light in the room is turned on the fan switches to higher speed in 50 s. The run-out time is set by the internal regulator from 2 to 30 minutes.

Front panel modifications

- The standard snow white front panel can be replaced by the following models:

Platinum
Grey metallic

Hi-Tech
Natural brushed
aluminium

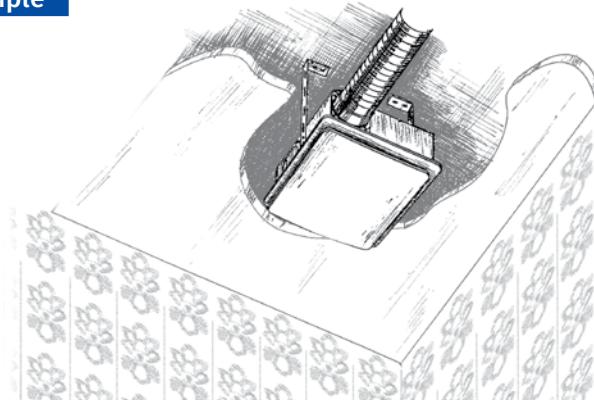

Hi-Tech Gold
Natural gold-coloured
aluminium

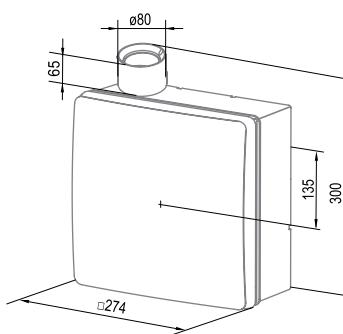

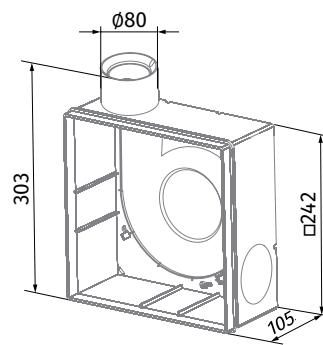

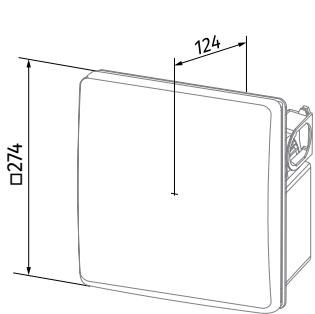

Hi-Tech Chrome
Natural mirror
aluminium

- The abrupt curves show high pressure performance and constant air flow of several Valeo-BP fans integrated into a single ventilation shaft.
 - available pressure up to 270 Pa at 35 m³/h;
 - available pressure up to 260 Pa at 60 m³/h;
 - available pressure up to 220 Pa at 100 m³/h.

High-rise mono-pipe ventilation system arrangement example

- The mechanical centralized mono-pipe exhaust ventilation system for kitchens and bathrooms based on Valeo-BP fans is specially designed for high-rise residential premises.
- Fresh air is supplied to bedrooms, children's room or living rooms through window or wall vents. Vent modifications with air volume regulation are available.
- Stale air is extracted by exhaust fans from the room through inside doors or door grilles in the kitchen, bathroom or WC.
- This ventilation system arrangement ensures non-stop controllable air circulation in the room, comfortable microclimate and high fire safety.

- 1 – Exhaust fan **Valeo-BPD** with extra spigot for – room-to-room ventilation.
- 2 – Exhaust fan **Valeo-BP**.
- 3 – BLAUBERG wall grille, **DECOR** series.
- 4 – BLAUBERG wall vent, **WHM** series.
- 5 – BLAUBERG window vent, **FHM** series.
- 6 – BLAUBERG ventilation door grilles, **DECOR** series.
- 7 – Central ventilation shaft.
- 8 – Flexible air ducts for connection of exhaust fans to the central ventilation shaft, e.g. BLAUBERG air ducts, **BlauFlex** series.

Valeo-BF

Mono-pipe ventilation exhaustcentrifugal fans

Use

- Extract ventilation systems installed in high-rise buildings and premises.
- For buildings with mono-pipe ventilation system.
- For mounting in kitchens and bathrooms.
- Flush wall or ceiling mounting.

Air flow:
up to 150 m³/h
42 l/s

Power:
from 12 W

Noise level:
from 27 dBA

Design

- The fan consists of the fireproof casing BF for flush mounting and exhaust ventilation unit Valeo with a flat front panel.
- The casing is made of silicate plates based on calcium silicate and has high thermal insulating properties.
- Equipped with a fire-retarding damper to prevent fire and smoke expanding along air ducts. If temperature in the duct reaches 90°C the thermal fuse melts and closes the damper.

- When the fan is off the fire-retarding damper serves as a backdraft damper.
- The front panel is made of snow white UV-resistant plastic.
- Filter with filter class G4 for motor, impeller and ductwork system protection against soiling.
- The filter is easily accessible for service operations.
- Due to modern design and various colour modifications the front panel matches well with any interior.
- The casing is equipped with oblong slotted joints to facilitate mounting of the casing in true vertical position
- If the casing is installed with some vertical deviations the special

turnable grille conceals possible mounting inaccuracies.

- Power is supplied to the fan through a sealed electric lead-in on the casing and the ventilation unit is equipped with an airtight terminal block for connection to the wiring system.
- For room-to-room ventilation some ventilation unit modifications are equipped with extra spigots: **Valeo-BFL** – on the left; **Valeo-BFR** – on the right; **Valeo-BFD** – on the bottom.
- Ingress protection rating IP55.

Motor

- Two- or three-speed motor with centrifugal impeller. Minimum energy demand.
- Galvanized steel impeller with forward curved blades.
- Automatic maintaining of constant air flow depending on variable air resistance of the duct.
- Balanced impeller ensures low-noise operation.
- Best aerodynamic characteristics due to special scroll casing design.
- Ball bearings provide long service life.
- The ventilation unit with motor is fixed inside the casing with special latches.

Speed control

- Step speed control with an external speed controller, e.g. **CDP-3/5** model which is available upon order.
- Wide range of intellectual controls programmable by set parameters (timer, adjustable timer, internal switch, photo sensor, humidity sensor).

Options for 2 speed fan models

○ Timer (Valeo-BF...T)

Depending on wiring connection the fan is off or runs permanently at low speed. The fan is turned to higher speed with external switch 50 s after activation. After turning the switch off the fan continues operating within 6 min at higher speed and then reverts to default operation mode.

○ Adjustable timer (Valeo-BF...TR)

Depending on wiring connection the fan is off or runs permanently at low speed. If the fan is turned on with an external switch it switches to higher speed 0 to 150 s after switch activation. After turning the fan off it continues running at higher speed within 2 to 30 minutes and then reverts to previous

mode. The fan run-out time and delay time for higher speed are regulated with the internal regulator.

○ Interval switch (Valeo-BF...I)

Depending on wiring connection the fan is off or runs permanently at low speed. In interval mode regulated from 0.5 to 15 hours the fan switches periodically to higher speed for 10 minutes. The switch interval is adjusted with the internal regulator. If light in the room is turned with the external switch the fan switches to higher speed in 50 s. After light is off the fan reverts to interval mode operation.

○ Photo sensor (Valeo-BF...F)

Depending on wiring connection the fan is off or runs permanently at low speed. If light in the room is turned with the external switch the fan switches to higher speed in 50 s. After light is off the fan continues running at higher speed within 2 to 30 min and then reverts to default operating mode. The fan run-out time and delay time for higher speed are regulated with the internal regulator.

○ Humidity sensor (Valeo-BF...H)

Depending on wiring connection the fan is off or runs permanently at low speed. The fan switches to higher speed as relative humidity in the room increases from 60 % up to 90 % and switches off as humidity drops by 10 % below set level. If light in the room is turned on the fan switches to higher speed in 50 s. The run-out time is set by the internal regulator from 2 to 30 minutes.

- 9 – Inter-floor fire damper.

Valeo-E

Mono-pipe ventilation exhaust centrifugal fans

Use

- Extract ventilation systems installed in high-rise buildings and premises.
- For buildings with mono-pipe ventilation system.
- For mounting in kitchens and bathrooms.
- Surface wall or ceiling mounting.

Air flow:
up to 150 m³/h
42 l/s

Power:
from 12 W

Noise level:
from 27 dBA

Design

- The fan consists of the plastic casing for surface mounting and exhaust ventilation unit Valeo with a flat front panel.
- The casing is made of durable ABS plastic and fitted with a gravity back-draft damper to prevent backdrafting.

- The front panel is made of snow-white UV-resistant plastic.
- Filter with filter class G4 for motor, impeller and ductwork system protection against soiling.
- The filter is easily accessible for service operations.
- Due to modern design and various colour modifications the front panel matches well with any interior.
- The casing is equipped with oblong slotted joints to facilitate mounting of the casing in true vertical position.
- Power is supplied to the fan through a sealed electric lead-in on the

casing and the ventilation unit is equipped with an airtight terminal block for connection to the wiring system

- Exhaust spigot diameter 80 mm.
- Ingress protection rating IP55.

Motor

- Two- or three-speed motor with centrifugal impeller. Minimum energy demand.
- Galvanized steel impeller with forward curved blades.
- Automatic maintaining of constant air flow depending on variable air resistance of the duct.
- Balanced impeller ensures low-noise operation.
- Best aerodynamic characteristics due to special scroll casing design.
- Ball bearings provide long service life.
- The ventilation unit with motor is fixed inside the casing with special latches.

Speed control

- Step speed control with an external speed controller, e.g. CDP-3/5 model which is available upon order.
- Wide range of intellectual controls programmable by set parameters (timer, adjustable timer, internal switch, photo sensor, humidity sensor).

Mounting

- Flexible air duct connected to ductwork system and wiring are routed to the fan through wall or ceiling.
- After finishing works a flexible air duct is fixed on the fan spigot with clamps.

Clamp

- Power is supplied to the fan through a sealed electric lead-in on the casing.
- The casing is installed at site with dowels and is adjusted vertically with oblong slotted joints.
- The ventilation unit connected to wiring system is installed in the mounted and fixed casing.

Options for 2 speed fan models

○ Timer (Valeo-E..T)

Depending on wiring connection the fan is off or runs permanently at low speed. The fan is turned to higher speed with external switch 50 s after activation. After turning the switch off the fan continues operating within 6 min at higher speed and then reverts to default operation mode.

○ Adjustable timer (Valeo-E..TR)

Depending on wiring connection the fan is off or runs permanently at low speed. If the fan is turned on with an external switch it switches to higher speed 0 to 150 s after switch activation. After turning the fan off it continues running at higher speed 2 to 30 minutes and then reverts to previous mode. The fan run-out time and delay time for higher speed are regulated with the internal regulator.

○ Interval switch (Valeo-E..I)

Depending on wiring connection the fan is off or runs permanently at low speed. In interval mode regulated from 0.5 to 15 hours the fan switches periodically to higher speed for 10 minutes. The switch interval is adjusted with the internal regulator. If light in the room is turned with the external switch the fan switches to higher speed in 50 s. After light is off the fan reverts to interval mode operation.

○ Photo sensor (Valeo-E..F)

Depending on wiring connection the fan is off or runs permanently at low speed. If light in the room is turned with the external switch the fan switches to higher speed in 50 s. After light is off the fan continues running at higher speed within 2 to 30 min and then reverts to default operating mode. The fan run-out time and delay time for higher speed are regulated with the internal regulator.

○ Humidity sensor (Valeo-E..H)

Depending on wiring connection the fan is off or runs permanently at low speed. The fan switches to higher speed as relative humidity in the room increases from 60 % up to 90 % and switches off as humidity drops by 10 % below set level. If light in the room is turned on the fan switches to higher speed in 50 s. The run-out time is set by the internal regulator from 2 to 30 minutes.

Front panel modifications

- The standard snow white front panel can be replaced by the following models:

Platinum
Grey metallic

Hi-Tech
Natural brushed
aluminium

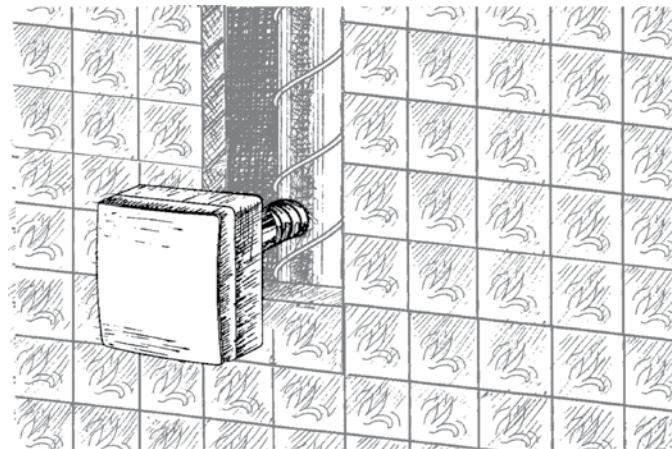

Hi-Tech Gold
Natural gold-coloured
aluminium

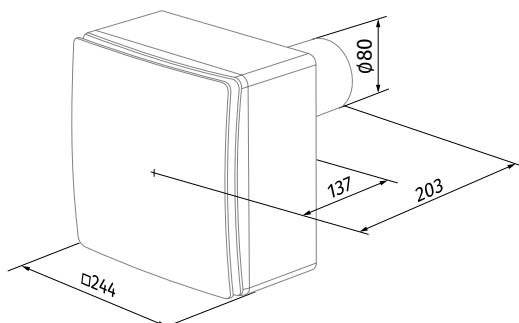

Hi-Tech Chrome
Natural mirror
aluminium

 - available pressure up to 220 Pa at 100 m³/h.

High-rise mono-pipe ventilation system arrangement example

- The mechanical centralized mono-pipe exhaust ventilation system for kitchens and bathrooms based on Valeo-E fans is specially designed for high-rise residential premises.
- Fresh air is supplied to bedrooms, children's room or living rooms through window or wall vents. Vent modifications with air volume regulation are available.
- Stale air is extracted by exhaust fans from the room through inside doors or door grilles in the kitchen, bathroom or WC.
- This ventilation system arrangement ensures non-stop controllable air circulation in the room, comfortable microclimate and high fire safety.

- 1 – Exhaust fan Valeo-E (surface mounting).
- 2 – Exhaust fan Valeo-E (ceiling mounting).
- 3 – BLAUBERG wall vent, WMH series.
- 4 – BLAUBERG window vent, FHM series.
- 5 – BLAUBERG ventilation grilles, DECOR series.
- 6 – Central ventilation shaft.
- 7 – Flexible air ducts for connection of exhaust fans to the central ventilation shaft, e.g. BLAUBERG air ducts, Blauflex series.

MRDL / MRIDL

Mounting frames

Use

- For facilitation of mounting and installation of Tower-H, Tower-V, Tower-H EC, Tower-V EC, Tower-A, Tower-AL roof fans on the flat roof.
- Prevents water ingress inside a ventilation shaft or air duct.

Design

- Mounting frames in standard (MRDL model) or sound-insulated modifications (MRIDL model).
- The casing is made of galvanized steel.
- MRIDL models are equipped with 20 mm heat- and sound-insulated mineral wool layer.
- Specially designed flanges on the frame bottom enable easy and reliable mounting on the roof.
- The casing has threaded openings for fastening of the fan with bolts.
- Size 630 – 1100 is equipped with a detachable bolted panel for mounting facilitation.

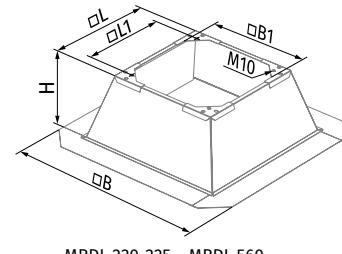

Mounting

- Fixing on the roof with flanges in the bottom with subsequent extra insulation.
- The fan is attached to the roof frame with bolts.

MRIDL 630 – MRIDL 1000-1100

KDL

Backdraft dampers

Use

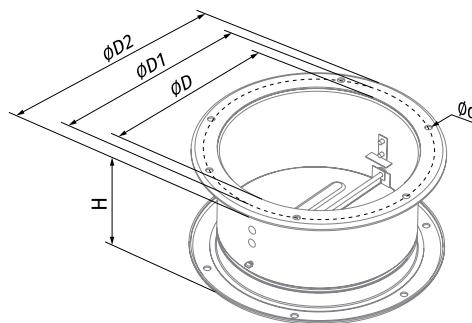

- For automatic shutoff of air ducts when the fan is off.
- Backdraft prevention when mechanical ventilation is off.
- Compatible with Tower-H, Tower-V, Tower-H EC, Tower-V EC roof fans.

Design

- The casing and the rotary blade are made of galvanized steel.
- Gravity actuated damper (the damper rotary blade is opened by air pressure and reset automatically when the fan is off and no air pressure is produced).
- The damper is equipped with the flanges for connection to the roof fan, the VDL flexible connector or the FDL counterflange.

Overall dimensions [mm]

Type	ØD	ØD1	ØD2	Ød	H	Weight [kg]
KDL 220-225	183	213	235	7	115	1.0
KDL 250-315	256	285	306	7	156	1.7
KDL 355-500	402	438	464	9	220	3.5
KDL 560	569	605	642	11.5	300	7.3

VDL

Flexible connectors for roof fans

Use

- Absorbing vibration from the fan to the air duct.
- Partial thermal distortion compensation in the air ductworks.
- For mounting with the Tower-H, Tower-V, Tower-H EC, Tower-V EC roof fans.

Design

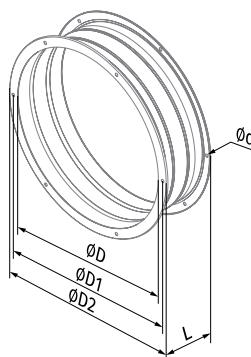

- Consists of two flanges interconnected with a vibration-absorbing material.
- The flanges made of galvanized steel.
- The connecting vibration-isolating material is made of nylon reinforced polyethylene fabric.

Mounting

- The end flanges of the flexible connector are fixed to the mating flanges of the air duct or fan (**FDL** counterflange) or to the backdraft damper through galvanized bolts and clamps.

Overall dimensions [mm]

Type	ϕD	$\phi D1$	$\phi D2$	ϕd	L	Weight [kg]
VDL 220-225	183	213	235	7	200	0.8
VDL 250-315	256	285	308	7	200	1.2
VDL 355-500	402	438	484	9	200	1.75
VDL 560	569	605	639	9	200	2.62

FDL

Counterflanges for roof fans

Use

- Connection of round air ducts with the Tower-H, Tower-V, Tower-H EC, Tower-V EC roof fans.

Design

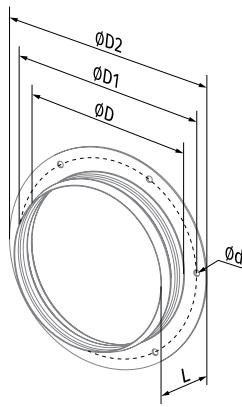

- Counterflange made of galvanized steel.

Mounting

- The end face is connected to the fan or other parts with bolts and the mating part is connected to the air duct.

Overall dimensions [mm]

Type	ϕD	ϕD_1	ϕD_2	ϕd	L	Weight [kg]
FDL 220-225	183	213	235	7	40	0.34

FDL 560	569	605	639	9	40	1.60

ALBE

Units for air cooling and heating

Use

- Air heating or cooling with water heater and its smooth distribution in a room with a fan and louvre shutters.
- Arranging of energy efficient air heating or cooling in various premises including medium and large-scale buildings.
- Local heating or cooling of job sites or separate areas.

Air flow:
up to 3850 m³/h
1070 l/s

Power:
from 136 W

Noise level:
from 53 dBA

Design

- The unit consists of a high-performance axial fan and a high-efficient copper-aluminium water heater.
- Steel polymer-coated casing equipped with louvre shutters for uniform air distribution.
- The water coils are equipped with internally threaded pipes on the casing side for connection to the heat medium.
- Fixing brackets are designed for wall or ceiling mounting.

Motor

- Asynchronous external rotor motor and axial impeller.
- Single-phase motor.
- Equipped with ball bearings for longer service life.
- Integrated thermal protection with automatic restart.

Designation key

Series	Power [kW]
ALBE	- 25; 30; 45

Speed control

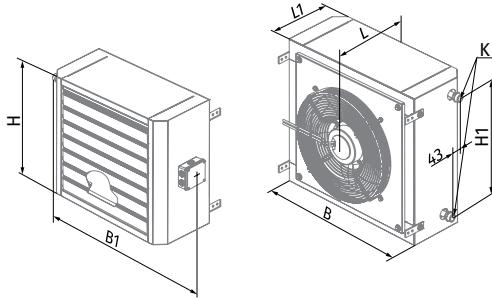

- Smooth speed control with an external thyristor controller or step speed control with an external auto transformer (both available upon separate order).
- Fan speed control provides regulation of the air flow and respectively the thermal transmission for heating or cooling.

Mounting

- The units may be installed vertically on walls or columns or horizontally on ceiling or beams.

Overall dimensions [mm]

Type	B	B1	H	H1	L	L2	K	Number of tube raw	Weight [kg]

EKH

Duct electrical heaters

Features

- For warming up of supply air in heating, ventilation and air conditioning systems installed in various premises.
- Compatible with Ø100 to 315 mm round air ducts.

Design

- Galvanized steel case and junction box.
- Heating elements made of stainless steel.
- Airtight connection with air ducts due to rubber seals.
- Several power options for each standard size.
- For higher heating capacity several heaters may be installed in series.
- Equipped with overheat protection thermostats:
 - basic protection with automatic restart at +50 °C;
 - emergency protection with manual restart at +90 °C.

Mounting

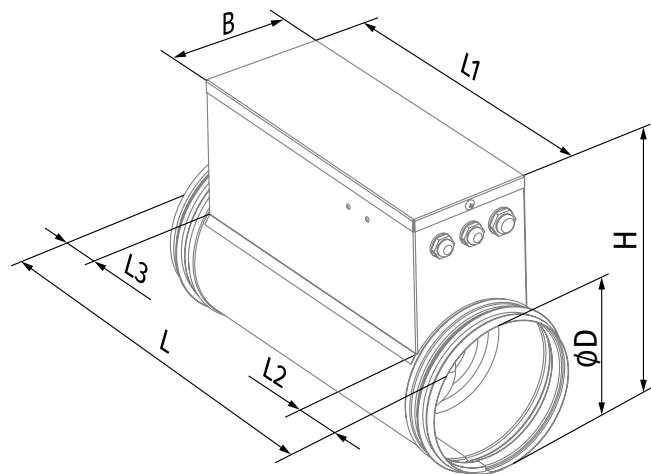

- Fixing to round ducts with clamps.
- Any mounting position except for the junction box downwards to prevent condensate leakage and short circuit.
- Install a filter upstream to the heater to protect heating elements against dirt ingress.
- Recommended distance between the heater and other system components must be not less than two connecting diameters for air flow stabilization.
- Duct heaters are rated for minimum air flow speed 1.5 m/s and maximum air temperature supplied to the units 40 °C. In case of speed regulation with a speed controller the minimum air speed through the heater must be provided.
- For correct and safe heater operation an automatic control and protection system is recommended including the following functions:
 - regulation of the heating capacity and temperature of the air heated up;
 - filter clogging control by a differential air pressure sensor;
 - power cut-off in case of supply fan shutdown or low air flow speed as well as in case of actuating the overheat protection thermostats;
 - heat removal from the heating elements after ventilation system shutdown.

Air temperature increase as a function of air flow

WKH

Duct water heaters for round ducts

Features

- For warming up of supply air in ventilation systems installed in various premises.
- Suitable for installation in supply or air handling units to warm up the supply air flow.
- For indoor use only if water serves as a heat carrier.
- For outdoor Features use antifreezing mixture (ethylene glycol solution).
- Compatible with Ø100 to 315 mm round air ducts.

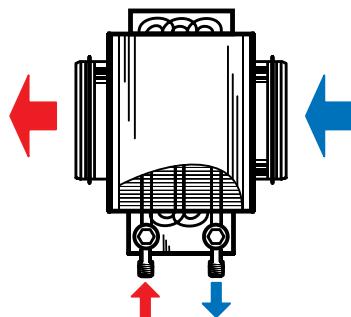

Design

- Galvanized steel case.
- Copper pipe manifold.
- Heat exchange surface made of aluminium plates.
- Airtight connection with air ducts due to rubber seals.
- Equipped with a nipple for the system deaeration.
- Outlet header is equipped with a spigot for installation of an immersion temperature sensor or freezing protection mechanism.
- Available in two- or four-row coil modifications.
- Suitable for operation at maximum operating pressure 1.6 MPa (16 bar) and maximum operating temperature +100°C.

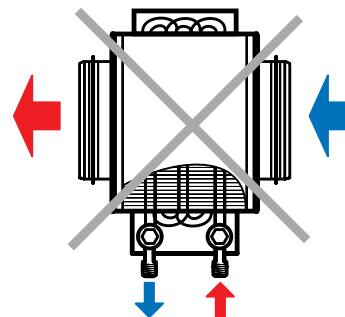

- Install the heater in front or behind the fan. In case of mounting behind the fan ensure a distance of not less than two connecting diameters for air flow stabilization and keep the maximum permissible air temperature inside the fan.
- Connect the heater on counter-flow basis, otherwise its capacity drops by 5-15 %. All the nomographic charts are rated for counter-flow connection.
- For correct and safe heater operation an automatic control and protection system is recommended, including the following functions:
 - regulation of the heating capacity and temperature of the air heated up;
 - filter clogging control by a differential air pressure sensor;
 - ventilation system start-up with pre-heated heater;
 - use of air dampers fitted with a spring return actuator;
 - fan turns off in case of freezing danger for the heater.

Mounting

- Fixing to round ducts with clamps.
- Any mounting position that ensures the heater deaeration.
- Install a filter upstream to the heater to protect heating elements against dirt ingress.

Connection against air flow

Water flow through the coil [l/s]

How to use water heater diagrams.

System Parameters: Air flow = 250 m^3/h .

Outside air temperature = -15 °C.

Water temperature (in/out) = +90/+70 °C.

The air flow is 250 m^3/h and the air speed in the heater is 3.75 m/s ①.

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -15 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the supply air temperature downstream of the heater (+17.50 °C) ③.

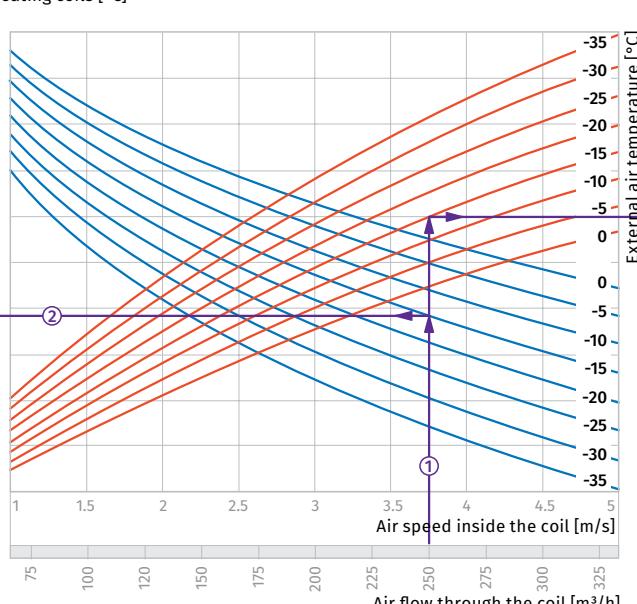

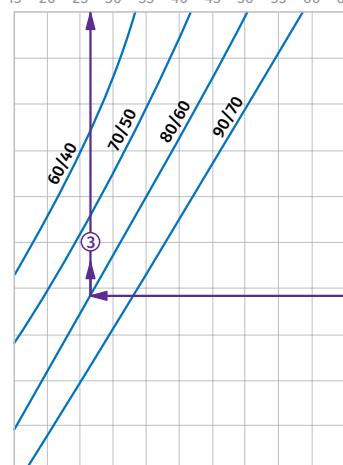

- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -15 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the heater power axis (3.25 kW) ⑤.

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (0.042 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (2.9 kPa).

Water flow through the coil [l/s]

How to use water heater diagrams.

System Parameters: Air flow = 250 m^3/h .

Outside air temperature = -15 °C.

Water temperature (in/out) = +80/+60 °C.

The air flow is 250 m^3/h and the air speed in the heater is 3.75 m/s ①.

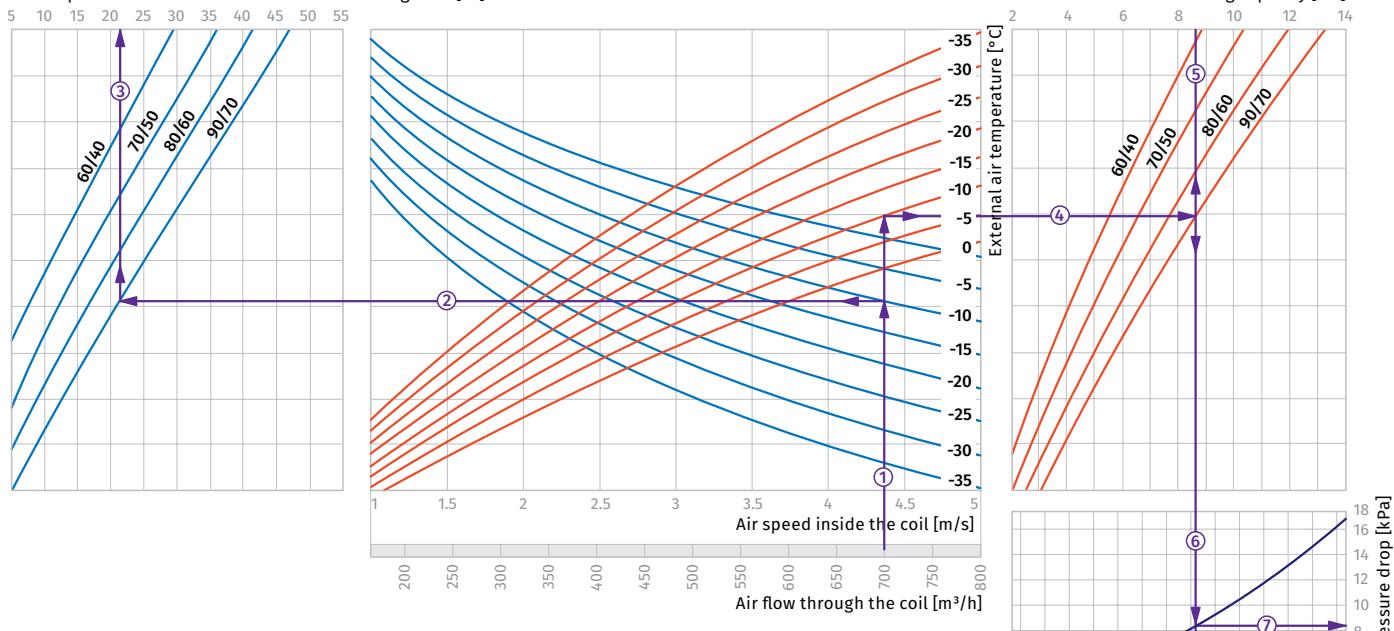

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -15 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +80/+60). From this point draw a vertical line to the supply air temperature downstream of the heater (+27 °C) ③.

- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -15 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +80/+60). From this point draw a vertical line to the heater power axis (5.2 kW) ⑤.

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (0.067 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (5.2 kPa).

WKH 150-2 / WKH 160-2 / WKH 200-2

Air temperature downstream of the water heating coils [°C]

**How to use water heater diagrams.**

System Parameters: Air flow = 700 m³/h.

Outside air temperature = -10 °C.

Water temperature (in/out) = +90/+70 °C.

The air flow is 700 m³/h and the air speed in the heater is 4.4 m/s ①.

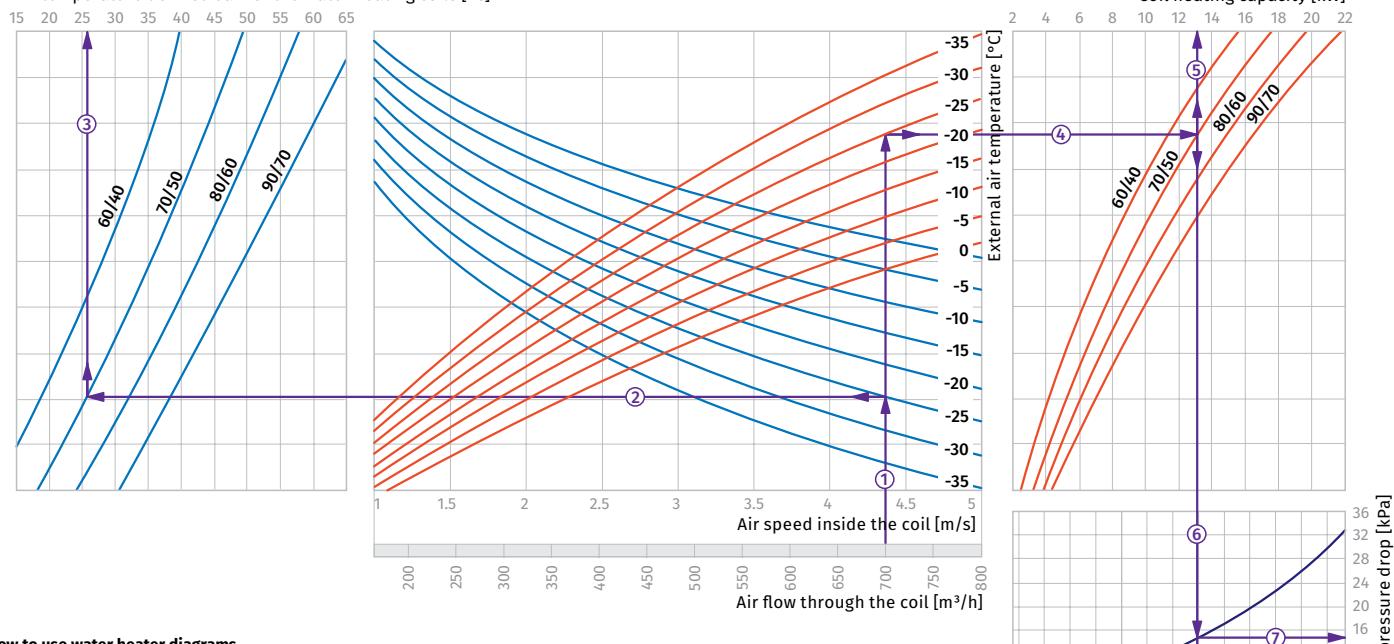

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -10 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the supply air temperature downstream of the heater (+21 °C) ③.

- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -10 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the heater power axis (8.6 kW) ⑤.

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (0.11 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (8.2 kPa).

WKH 150-4 / WKH 160-4 / WKH 200-4

Air temperature downstream of the water heating coils [°C]

**How to use water heater diagrams.**

System Parameters: Air flow = 700 m³/h.

Outside air temperature = -25 °C.

Water temperature (in/out) = +70/+50 °C.

The air flow is 700 m³/h and the air speed in the heater is 4.4 m/s ①.

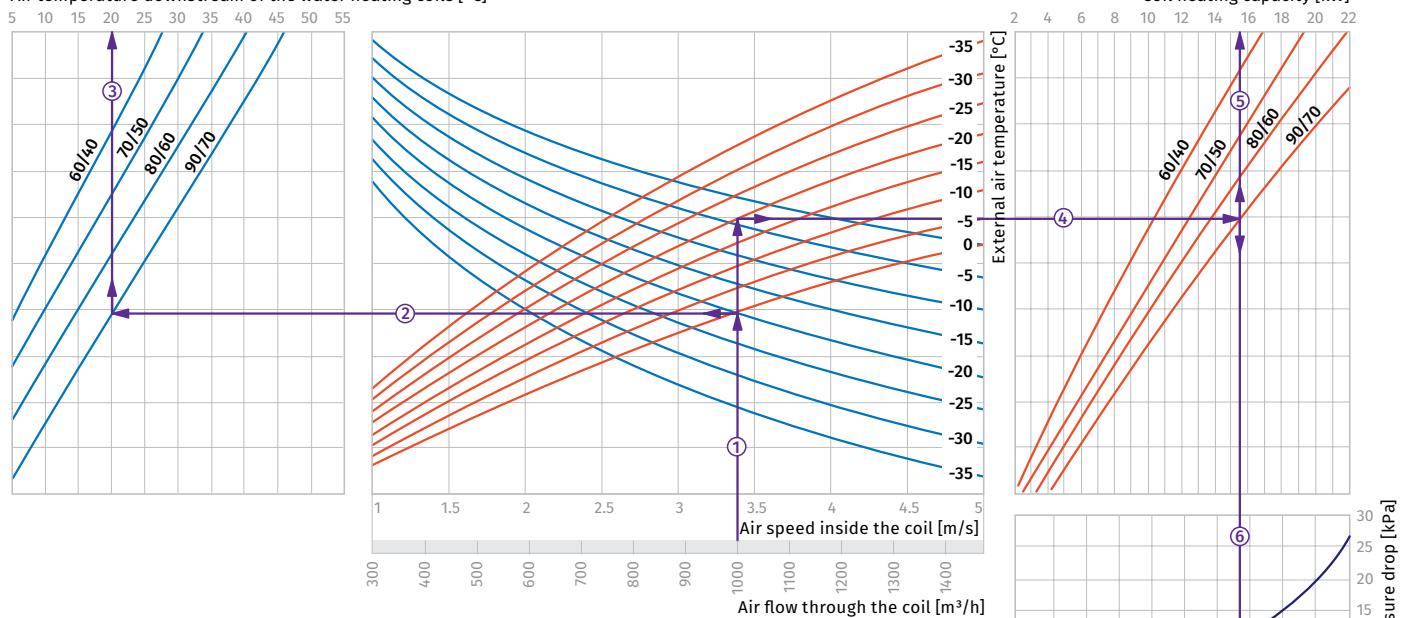

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -25 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +70/+50). From this point draw a vertical line to the supply air temperature downstream of the heater (+26 °C) ③.

- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -25 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +70/+50). From this point draw a vertical line to the heater power axis (13.0 kW) ⑤.

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (0.16 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (15 kPa).

WKH 250-2

Air temperature downstream of the water heating coils [°C]

How to use water heater diagrams.

System Parameters: Air flow = 1500 m³/h.

Outside air temperature = -20 °C.

Water temperature (in/out) = +90/+70 °C.

- Air Speed inside coil:** Starting from 1000 m³/h on the air flow scale draw a vertical line ①. This line crosses the air speed axis and shows a value of about 3.4 m/s.

- Supply air temperature:** Prolong the line ① up to the point where it crosses the outside air temperature (blue curve, e.g. -20°C); then draw a horizontal line ② from this point to the left until it crosses the water in/out temperature curve (e.g. +90/+70 °C). From this point draw a vertical line ③ to the supply air temperature axis on top of the graphic (+20°C)

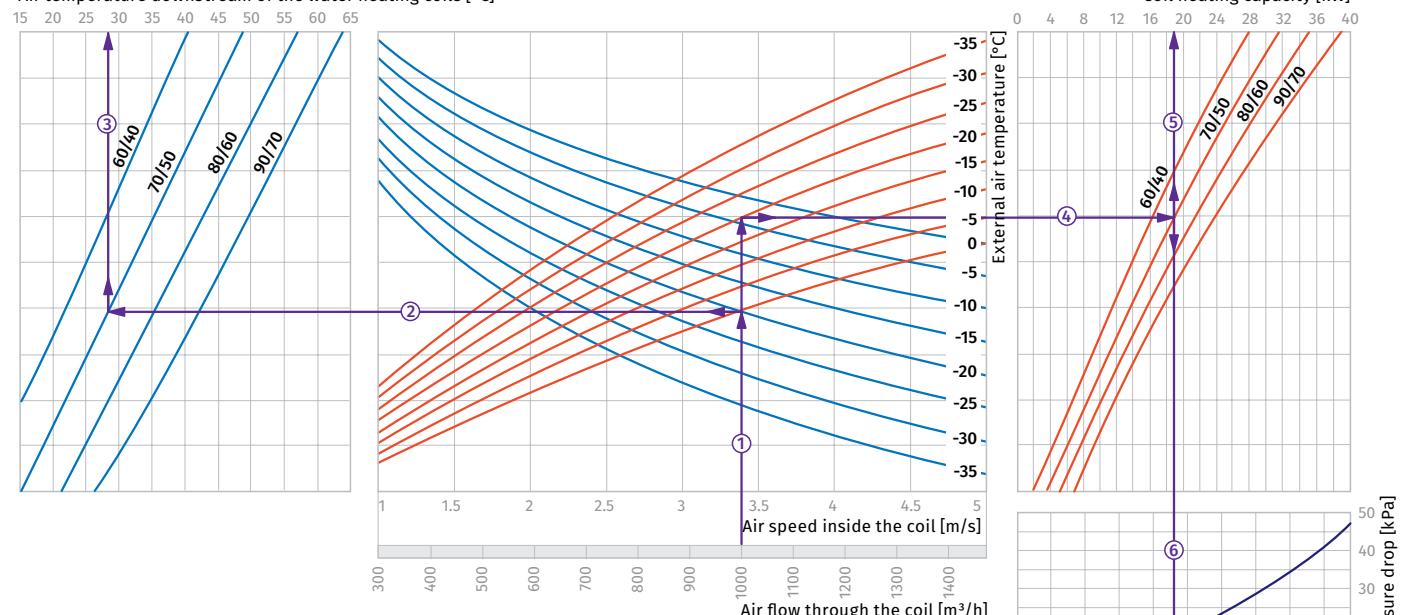

- Heating coil capacity:** Prolong the line ① up to the point where it crosses the outside air temperature (e.g. -20°C, red curve) and draw a horizontal line ④ from this point to the right until it crosses the water in/out temperature curve (e.g., +90/+70 °C). From here draw a vertical line ⑤ up to the scale representing the heating coil capacity (15.5 kW).

- Water flow:** Prolong the line ⑤ down to the water flow axis ⑥ at the bottom of the graphic (0.019 l/s).

- Water pressure drop:** Draw the line ⑦ from the point where the line ⑥ crosses the black curve to the pressure drop axis (11 kPa).

WKH 250-4

Air temperature downstream of the water heating coils [°C]

How to use water heater diagrams.

System Parameters: Air flow = 1000 m³/h.

Outside air temperature = -20 °C.

Water temperature (in/out) = +70/+50 °C.

- Air Speed inside coil:** Starting from 1000 m³/h on the air flow scale draw a vertical line ①. This line crosses the air speed axis and shows a value of about 3.4 m/s.

- Supply air temperature:** Prolong the line ① up to the point where it crosses the outside air temperature (blue curve, e.g. -20°C); then draw a horizontal line ② from this point to the left until it crosses the water in/out temperature curve (e.g. +70/+50 °C). From this point draw a vertical line ③ to the supply air temperature axis on top of the graphic (+27°C).

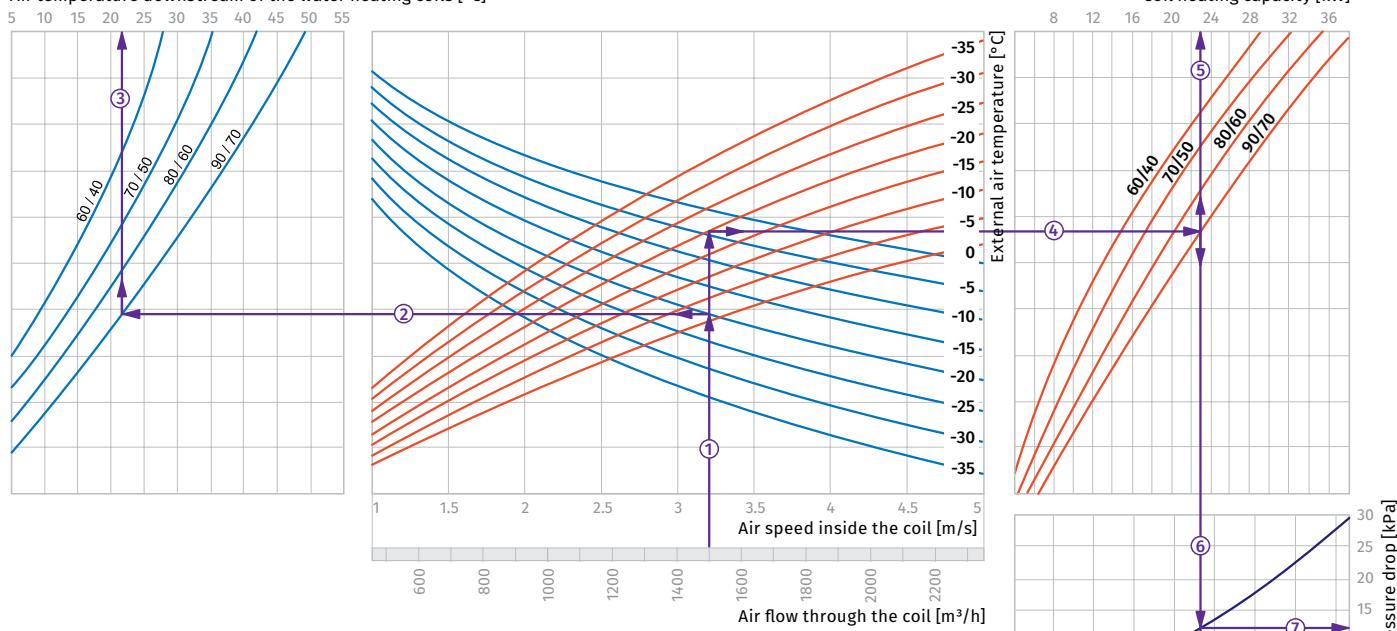

- Heating coil capacity:** Prolong the line ① up to the point where it crosses the outside air temperature (e.g. -20°C, red curve) and draw a horizontal line ④ from this point to the right until it crosses the water in/out temperature curve (e.g., +70/+50 °C). From here draw a vertical line ⑤ up to the scale representing the heating coil capacity (19 kW).

- Water flow:** Prolong the line ⑤ down to the water flow axis ⑥ at the bottom of the graphic (0.023 l/s).

- Water pressure drop:** Draw the line ⑦ from the point where the line ⑥ crosses the black curve to the pressure drop axis (17 kPa).

WKh 315-2

Air temperature downstream of the water heating coils [°C]

**How to use water heater diagrams.**

System Parameters: Air flow = 1500 m³/h.

Outside air temperature = -20 °C.

Water temperature (in/out) = +90/+70 °C.

- **Air Speed inside coil:** Starting from 1500 m³/h on the air flow scale draw a vertical line ①. This line crosses the air speed axis and shows a value of about 3.2 m/s

- **Supply air temperature:** Prolong the line ① up to the point where it crosses the outside air temperature (blue curve, e.g. -20°C); then draw a horizontal line ② from this point to the left until it crosses the water in/out temperature curve (e.g. +90/+70 °C). From this point draw a vertical line ③ to the supply air temperature axis on top of the graphic (+21°C).

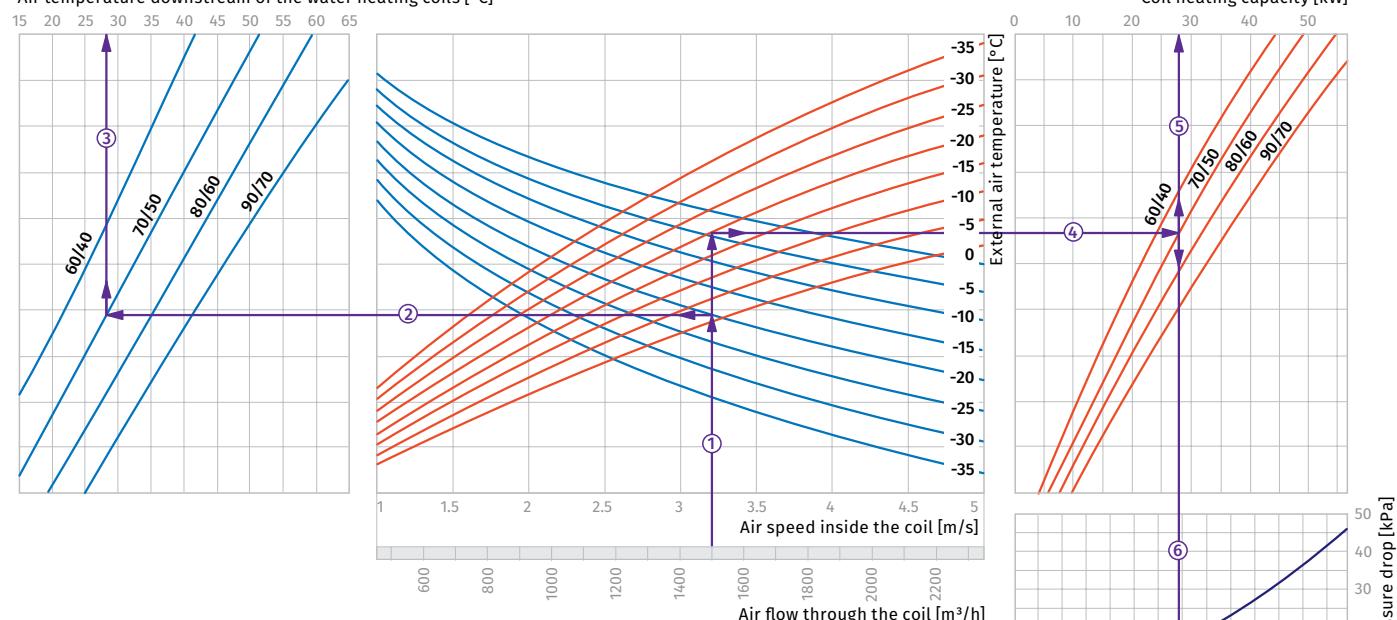

- **Heating coil capacity:** Prolong the line ① up to the point where it crosses the outside air temperature (e.g. -20°C, red curve) and draw a horizontal line ④ from this point to the right until it crosses the water in/out temperature curve (e.g., +90/+70 °C). From here draw a vertical line ⑤ up to the scale representing the heating coil capacity (23 kW).

- **Water flow:** Prolong the line ⑤ down to the water flow axis ⑥ at the bottom of the graphic (0.28 l/s).

- **Water pressure drop:** Draw the line ⑦ from the point where the line ⑥ crosses the black curve to the pressure drop axis (12.5 kPa).

WKh 315-4

Air temperature downstream of the water heating coils [°C]

**How to use water heater diagrams.**

System Parameters: Air flow = 1500 m³/h.

Outside air temperature = -20 °C.

Water temperature (in/out) = +70/+50 °C.

- **Air Speed inside coil:** Starting from 1500 m³/h on the air flow scale draw a vertical line ①. This line crosses the air speed axis and shows a value of about 3.2 m/s

- **Supply air temperature:** Prolong the line ① up to the point where it crosses the outside air temperature (blue curve, e.g. -20°C); then draw a horizontal line ② from this point to the left until it crosses the water in/out temperature curve (e.g. +70/+50 °C). From this point draw a vertical line ③ to the supply air temperature axis on top of the graphic (+28°C).

- **Heating coil capacity:** Prolong the line ① up to the point where it crosses the outside air temperature (e.g. -20°C, red curve) and draw a horizontal line ④ from this point to the right until it crosses the water in/out temperature curve (e.g., +70/+50 °C). From here draw a vertical line ⑤ up to the scale representing the heating coil capacity (28.0 kW).

- **Water flow:** Prolong the line ⑤ down to the water flow axis ⑥ at the bottom of the graphic (0.34 l/s).

- **Water pressure drop:** Draw the line ⑦ from the point where the line ⑥ crosses the black curve to the pressure drop axis (16 kPa).

EKH

Duct electrical heaters for rectangular ducts

Features

- For warming up of supply air in heating, ventilation and air conditioning systems installed in various premises.
- Compatible with 400x200 up to 1000x500 mm rectangular air ducts.

Design

- Galvanized steel case and junction box.
- Heating elements are made of stainless steel and have additional ribbing to increase heat exchange surface.
- Several power options for each standard size.
- For higher heating capacity several heaters may be installed in series.
- Equipped with overheat protection thermostats:
 - basic protection with automatic restart at +50 °C;
 - emergency protection with manual restart at +90 °C.

Mounting

- Fixing to rectangular ducts with flange connection.
- Any mounting position except for the junction box downwards to prevent condensate leakage and short circuit.
- Install a filter upstream to the heater to protect heating elements against dirt ingress.
- Recommended distance between the heater and other system components must be not less than one air heater diagonal for air flow stabilization.

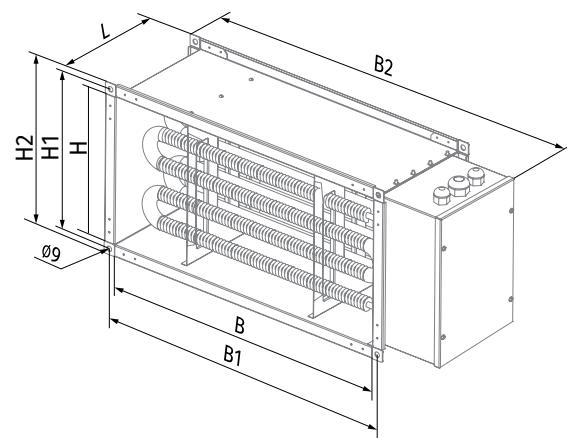

- Duct heaters are rated for minimum air flow speed 1.5 m/s and maximum operating air temperature supplied to the units 40 °C. In case of speed regulation with a speed controller the minimum air speed through the heater must be provided.
- For correct and safe heater operation an automatic control and protection system is recommended, including the following functions:
 - regulation of the heating capacity and temperature of the air heated up;
 - filter clogging control by a differential air pressure sensor;
 - power cut-off in case of the supply fan shutdown or low air flow speed as well as in case of actuating the overheat protection thermostats;
 - heat removal from the heating elements after ventilation system shutdown.

WKH

Duct water heaters for rectangular ducts

Features

- For warming up of supply air in ventilation systems installed in various premises.
- Suitable for installation in supply or air handling units to warm up the supply air flow.
- For indoor use only if water serves as a heat carrier.
- For outdoor Features use antifreezing mixture (ethylene glycol solution).
- Compatible with 400x200 up to 1000x500 mm rectangular air ducts.

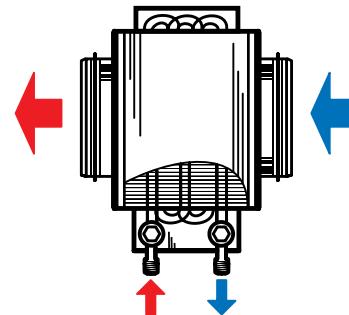

Design

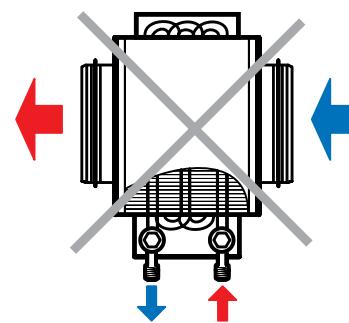

- Galvanized steel case.
- Copper pipe manifold.
- Heat exchange surface made of aluminium plates.
- Equipped with a nipple for the system deaeration.
- Outlet header is equipped with a spigot for installation of an immersion temperature sensor or freezing protection mechanism.
- Available in two, three- or four-row tube modifications.
- Suitable for operation at maximum operating pressure 1.6 MPa (16 bar) and maximum transported air temperature +100 °C.

Mounting

- Fixing to rectangular ducts with flange connection.
- Any mounting position that ensures the heater deaeration.
- Install a filter upstream to the heater to protect heating elements against dirt ingress.
- Install the heater in front or behind the fan. In case of mounting behind the fan ensure the distance no less than 1-1.5 m for air flow stabilization and keep the maximum permissible air temperature inside the fan.
- Connect the heater on counter-flow basis, otherwise its capacity drops by 5-15 %. All the nomographic charts are rated for counter-flow connection.
- For correct and safe heater operation an automatic control and protection system is recommended, including the following functions:
 - regulation of the heating capacity and temperature of the air heated up;
 - filter clogging control by a differential air pressure sensor;
 - ventilation system start-up with pre-heated heater;
 - use of air dampers with a servo actuator with a return spring;
 - fan turning off in case of the heater freezing danger.

Connection against air flow

Connection along air flow

Air pressure loss for water heaters WKH

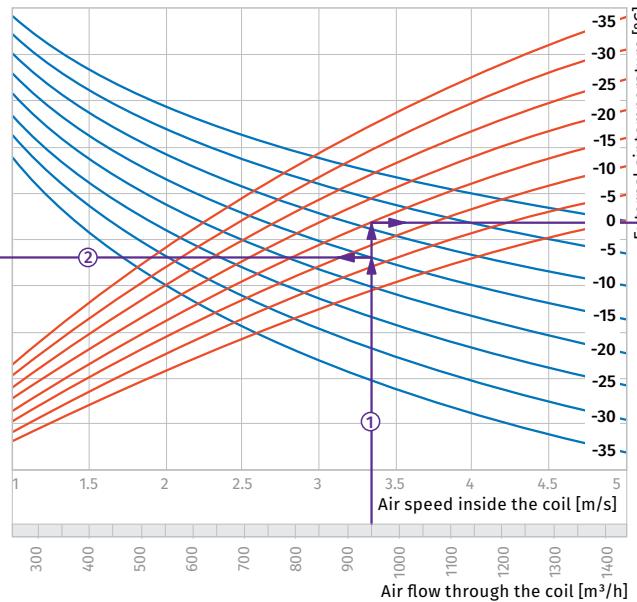

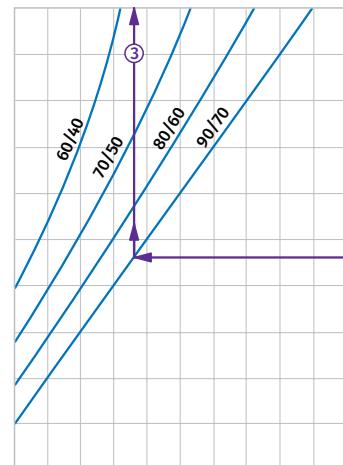

Water heaters calculation diagram

WKH 40x20-2

Air temperature downstream of the water heating coils [°C]

5 10 15 20 25 30 35 40 45 50 55

How to use water heater diagrams.

System Parameters: Air flow = 950 m³/h.

Outside air temperature = -15 °C.

Water temperature (in/out) = +90/+70 °C.

The air flow is 950 m³/h and the air speed in the heater is 3.35 m/s ①.

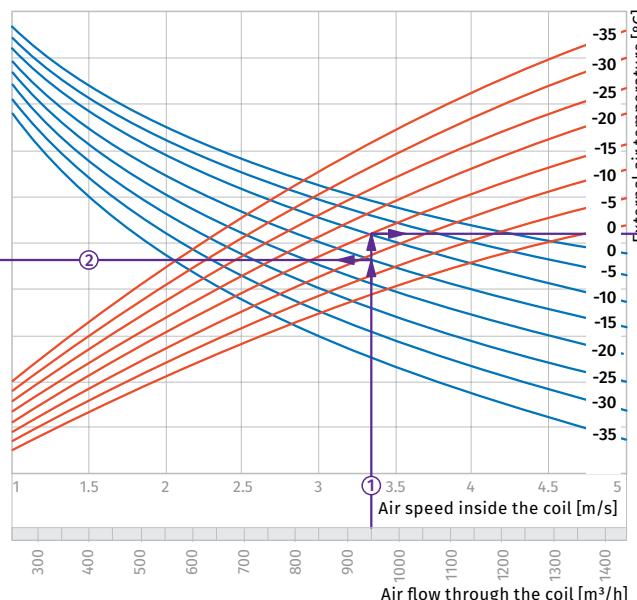

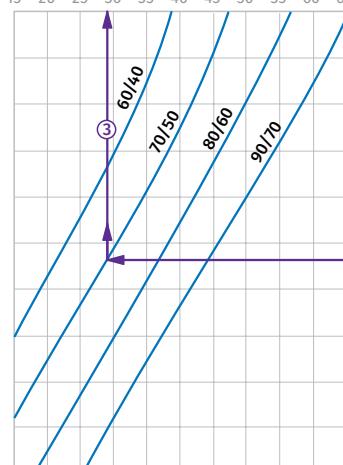

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -15 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the supply air temperature downstream of the heater (+23 °C) ③.
- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -15 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the heater power axis (13.5 kW) ⑤.

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (0.14 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (1.5 kPa).

WKH 40x20-4

Air temperature downstream of the water heating coils [°C]

15 20 25 30 35 40 45 50 55 60 65

How to use water heater diagrams.

System Parameters: Air flow = 250 m³/h.

Outside air temperature = -15 °C.

Water temperature (in/out) = +70/+50 °C.

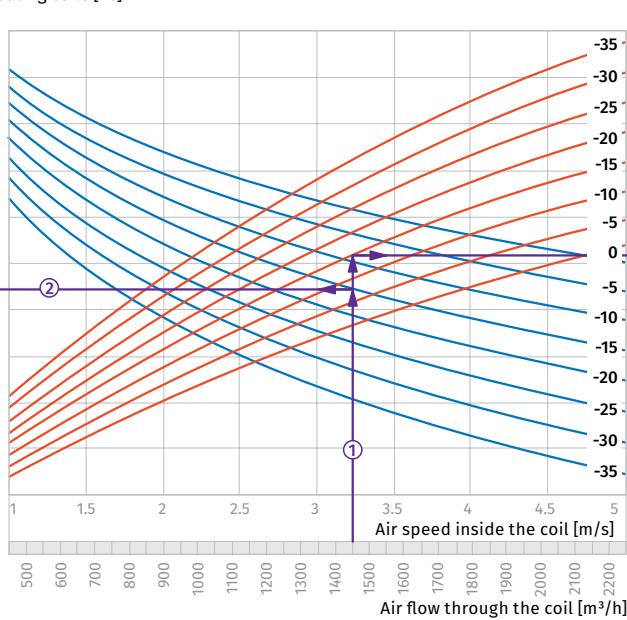

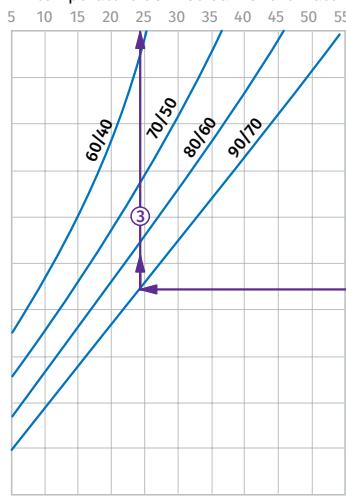

The air flow is 950 m³/h and the air speed in the heater is 3.35 m/s ①.

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -15 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +70/+50). From this point draw a vertical line to the supply air temperature downstream of the heater (+29 °C) ③.
- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -15 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +70/+50). From this point draw a vertical line to the heater power axis (16.0 kW) ⑤.

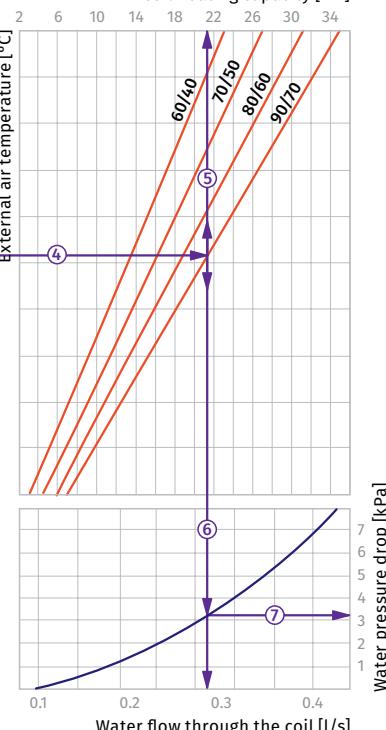

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (0.2 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (2.1 kPa).

WKh 50x25-2

Air temperature downstream of the water heating coils [°C]

Coil heating capacity [kW]

**How to use water heater diagrams.**

System Parameters: Air flow = 1450 m³/h.

Outside air temperature = -15 °C.

Water temperature (in/out) = +90/+70 °C.

The air flow is 1450 m³/h and the air speed in the heater is 3.2 m/s ①.

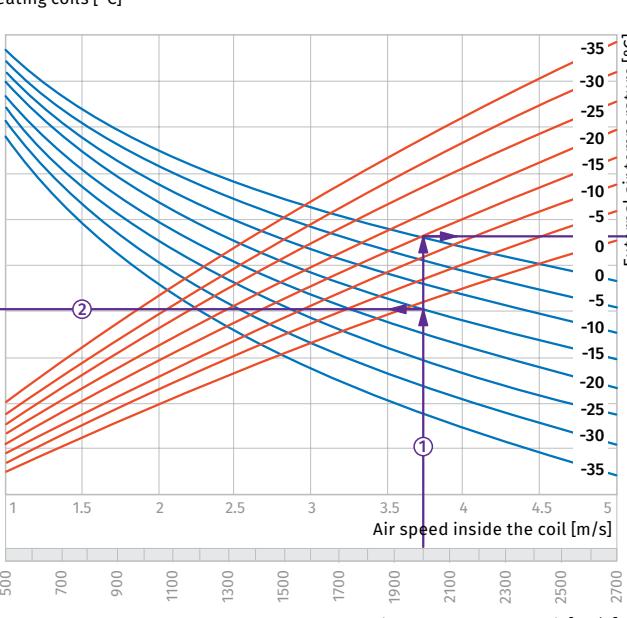

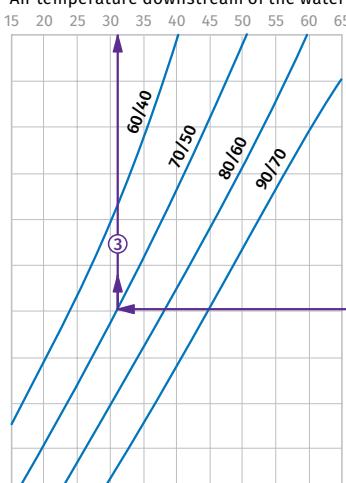

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -15 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the supply air temperature downstream of the heater (+24 °C) ③.

- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -15 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the heater power axis (21.5 kW) ⑤.

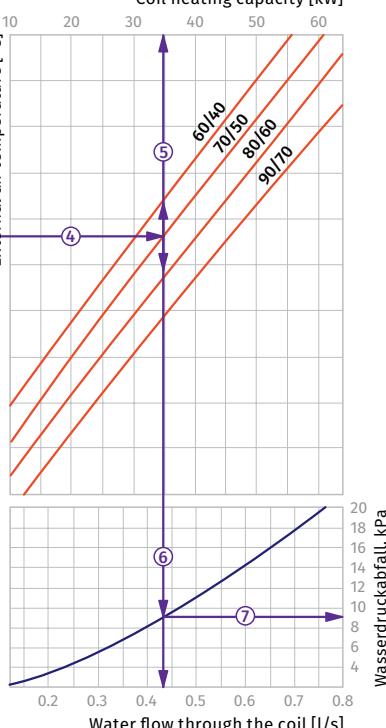

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (0.27 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (3.2 kPa).

WKh 50x30-4

Air temperature downstream of the water heating coils [°C]

Coil heating capacity [kW]

**How to use water heater diagrams.**

System Parameters: Air flow = 2000 m³/h.

Outside air temperature = -15 °C.

Water temperature (in/out) = +70/+50 °C.

The air flow is 2000 m³/h and the air speed in the heater is 3.75 m/s ①.

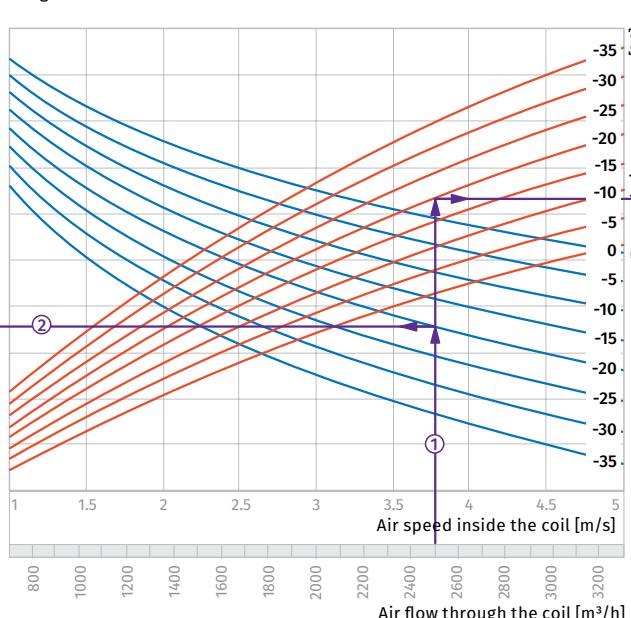

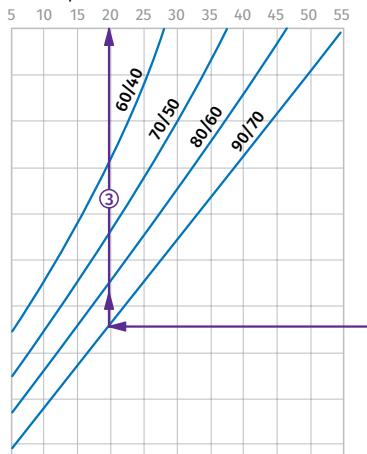

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -15 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +70/+50). From this point draw a vertical line to the supply air temperature downstream of the heater (+31 °C) ③.

- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -15 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +70/+50). From this point draw a vertical line to the heater power axis (35.0 kW) ⑤.

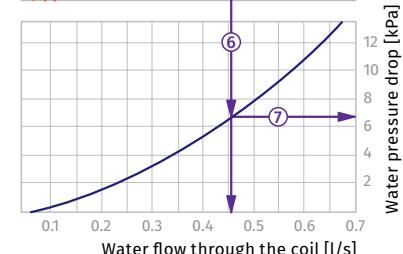

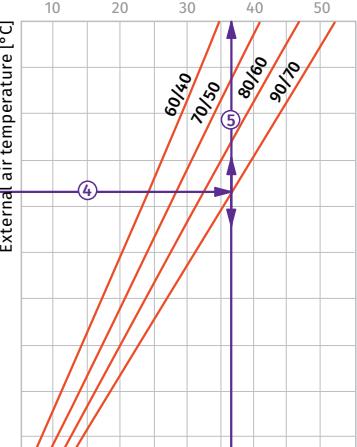

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (0.43 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (9.0 kPa).

WKH 60x30-2

Air temperature downstream of the water heating coils [°C]

Coil heating capacity [kW]

How to use water heater diagrams.

 System Parameters: Air flow = 2500 m³/h.

Outside air temperature = -20 °C.

Water temperature (in/out) = +90/+70 °C.

The air flow is 2500 m³/h and the air speed in the heater is 3.75 m/s ①.

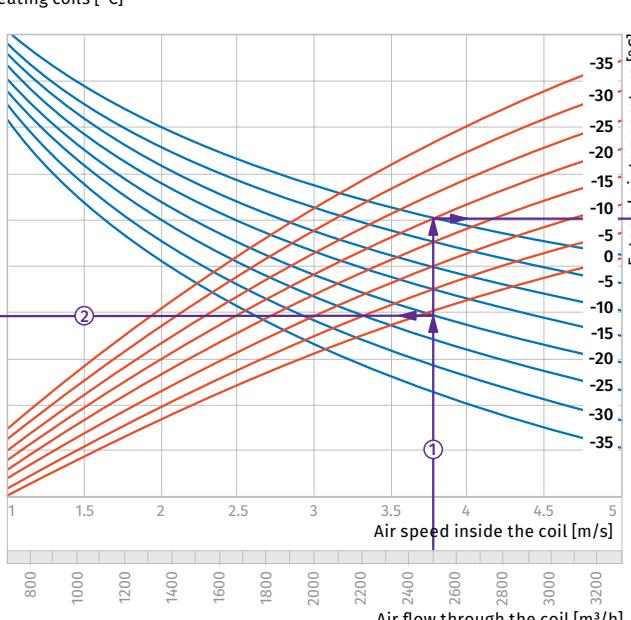

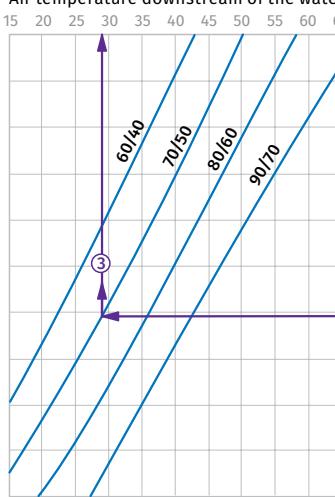

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -20 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the supply air temperature downstream of the heater (+20 °C) ③.

- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -20 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the heater power axis (37.0 kW) ⑤.

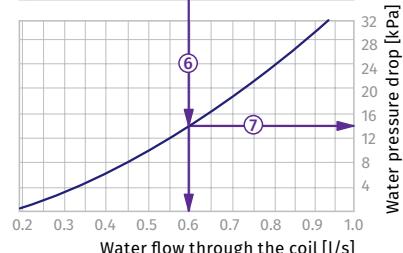

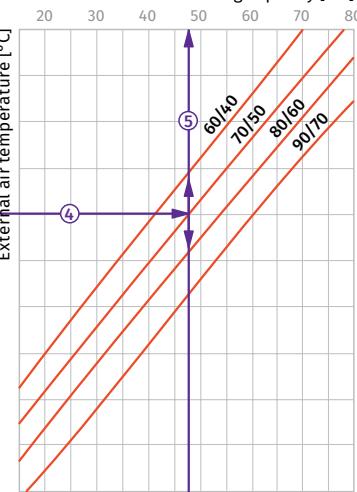

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (0.46 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (6.7 kPa).

WKH 60x30-4

Air temperature downstream of the water heating coils [°C]

Coil heating capacity [kW]

How to use water heater diagrams.

 System Parameters: Air flow = 2500 m³/h.

Outside air temperature = -20 °C.

Water temperature (in/out) = +70/+50 °C.

The air flow is 2500 m³/h and the air speed in the heater is 3.75 m/s ①.

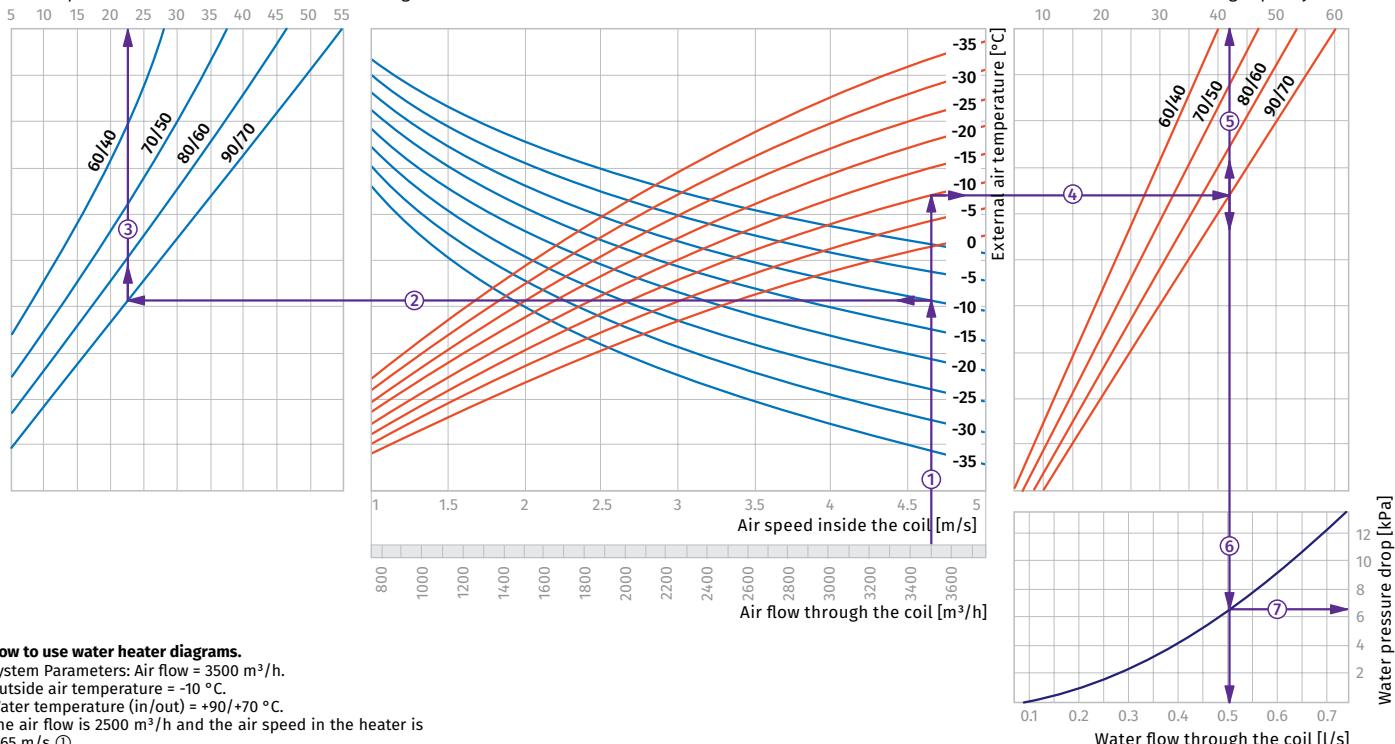

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -20 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +70/+50). From this point draw a vertical line to the supply air temperature downstream of the heater (+29 °C) ③.

- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -20 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +70/+50). From this point draw a vertical line to the heater power axis (48.0 kW) ⑤.

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (0.6 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (14.0 kPa).

WKH 60x35-2

Air temperature downstream of the water heating coils [°C]

**How to use water heater diagrams.**

System Parameters: Air flow = 3500 m³/h.

Outside air temperature = -10 °C.

Water temperature (in/out) = +90/+70 °C.

The air flow is 2500 m³/h and the air speed in the heater is 4.65 m/s ①.

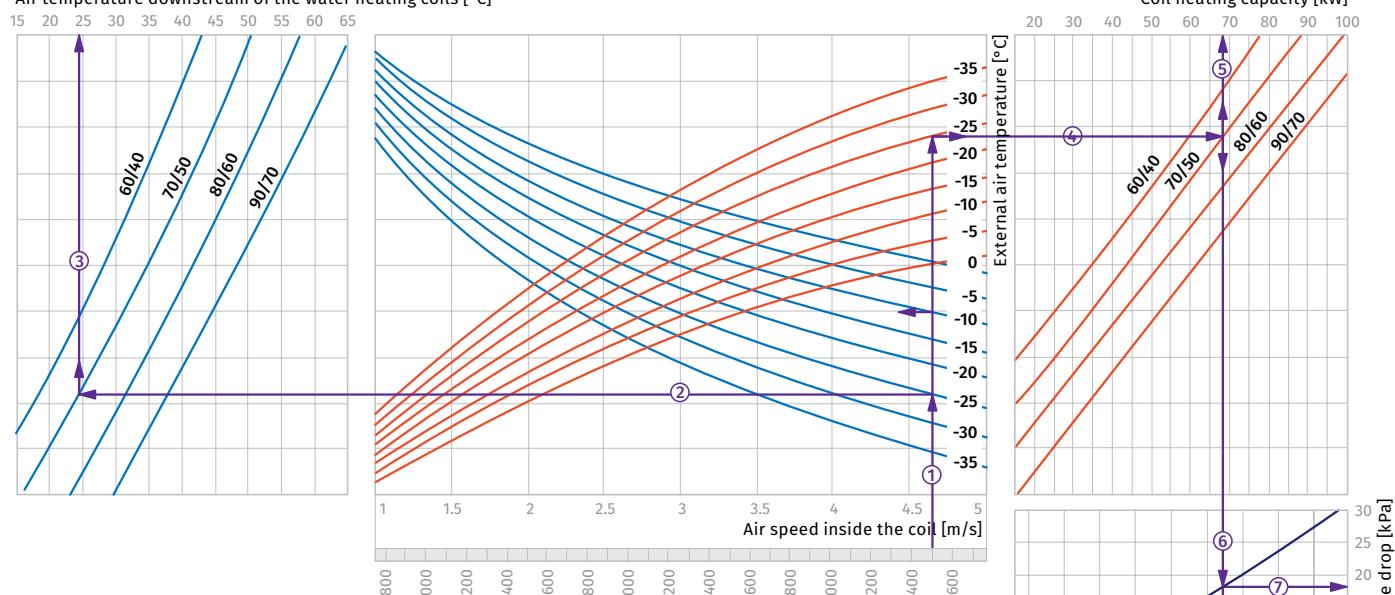

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -10 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the supply air temperature downstream of the heater (+22.5 °C) ③.

- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -10 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the heater power axis (42.0 kW) ⑤.

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (0.5 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (6.5 kPa).

WKH 60x35-4

Air temperature downstream of the water heating coils [°C]

**How to use water heater diagrams.**

System Parameters: Air flow = 3500 m³/h.

Outside air temperature = -25 °C.

Water temperature (in/out) = +70/+50 °C.

The air flow is 3500 m³/h and the air speed in the heater is 4.65 m/s ①.

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -25 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +70/+50). From this point draw a vertical line to the supply air temperature downstream of the heater (+24 °C) ③.

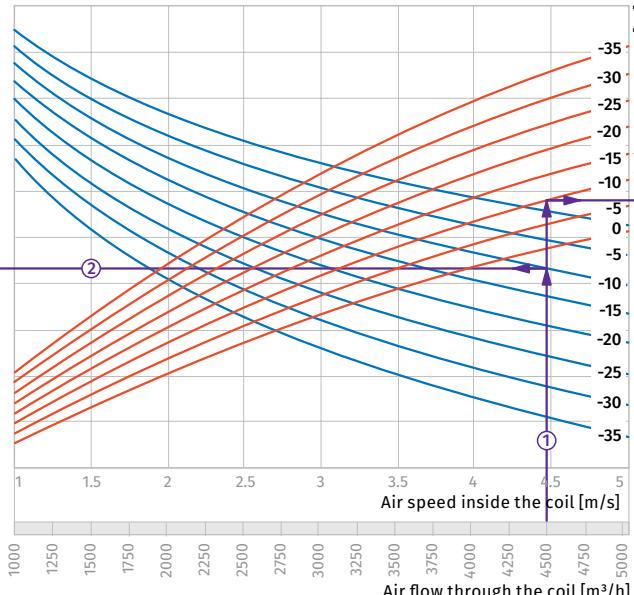

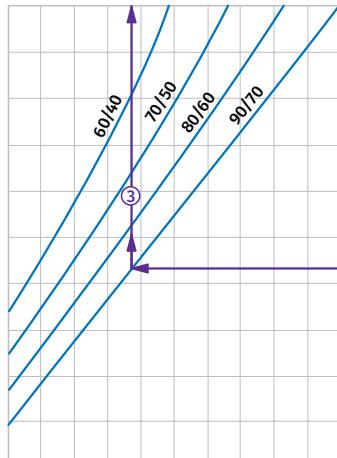

- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -25 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +70/+50). From this point draw a vertical line to the heater power axis (68.0 kW) ⑤.

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (0.84 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (18.0 kPa).

How to use water heater diagrams.

System Parameters: Air flow = 4500 m³/h.

Outside air temperature = -20 °C.

Water temperature (in/out) = +90/+70 °C.

The air flow is 2500 m³/h and the air speed in the heater is 4.45 m/s ①.

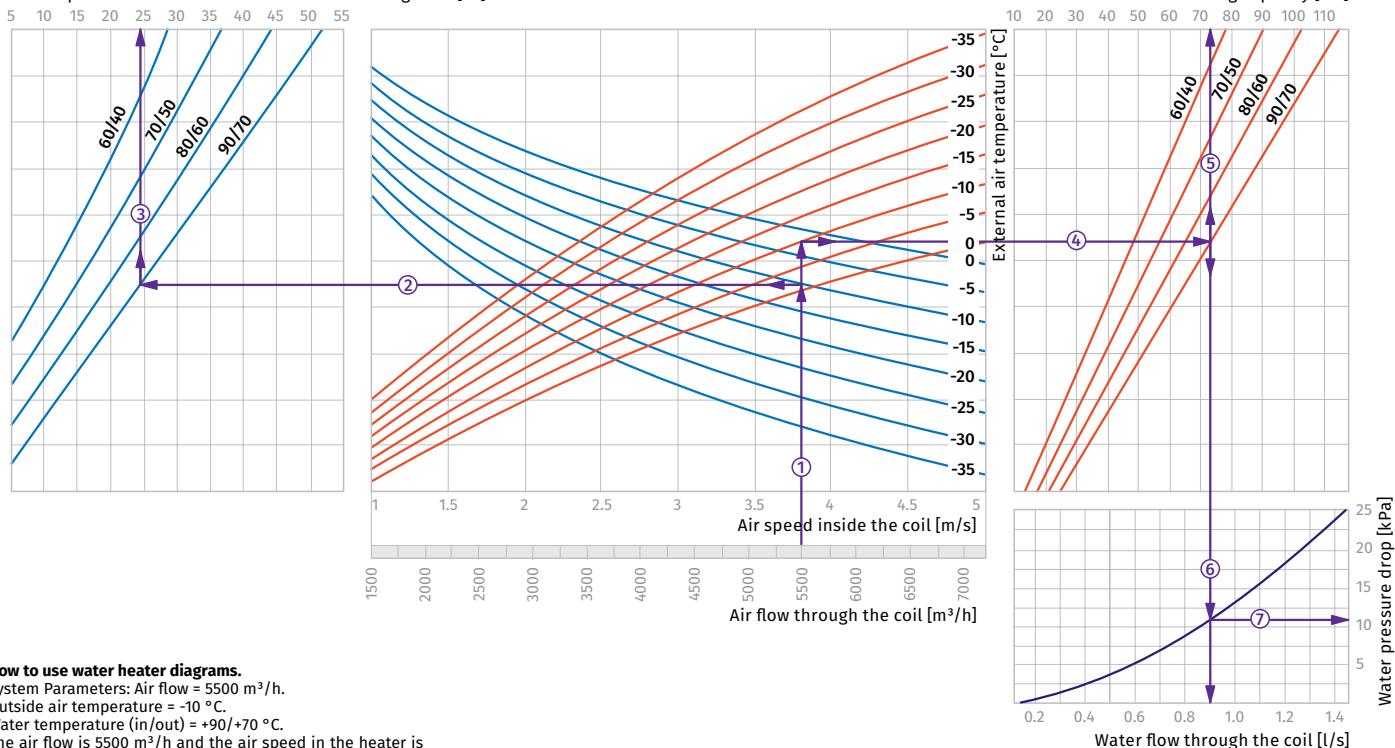

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -20 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the supply air temperature downstream of the heater (+27 °C) ③.

- To calculate the heater power find the intersection point of the air flow line ① with the rated winter temperature shown in red line (e.g., -20 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the heater power axis (82.0 kW) ⑤.

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (1.02 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (13.0 kPa).

WKH 80x50-2

Air temperature downstream of the water heating coils [°C]

**How to use water heater diagrams.**

System Parameters: Air flow = 5500 m³/h.

Outside air temperature = -10 °C.

Water temperature (in/out) = +90/+70 °C.

The air flow is 5500 m³/h and the air speed in the heater is 3.8 m/s (1).

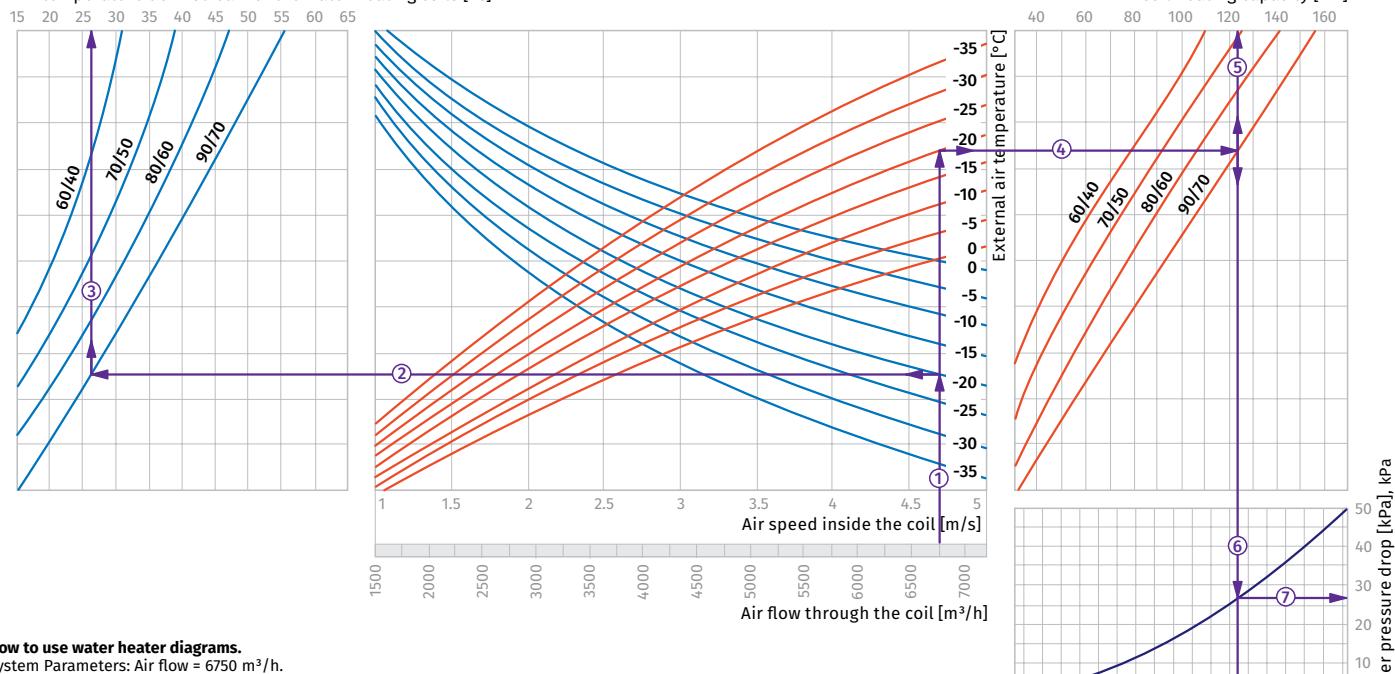

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -10 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the supply air temperature downstream of the heater (+24.5 °C) ③.

- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -10 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the heater power axis (73.0 kW) ⑤.

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (0.9 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (11.0 kPa).

WKH 80x50-3

Air temperature downstream of the water heating coils [°C]

**How to use water heater diagrams.**

System Parameters: Air flow = 6750 m³/h.

Outside air temperature = -20 °C.

Water temperature (in/out) = +90/+70 °C.

The air flow is 6750 m³/h and the air speed in the heater is 4.7 m/s (1).

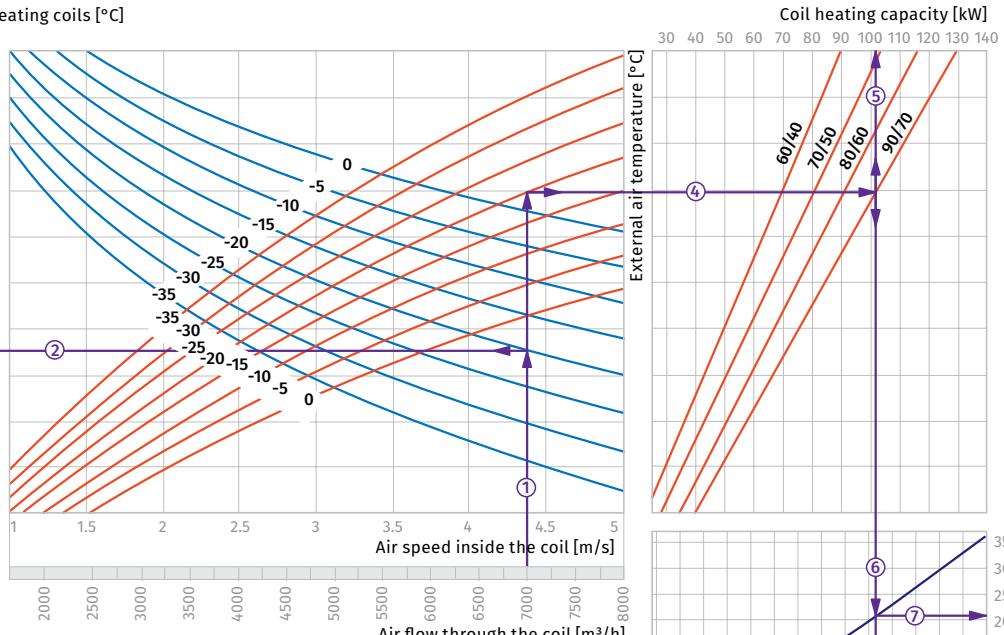

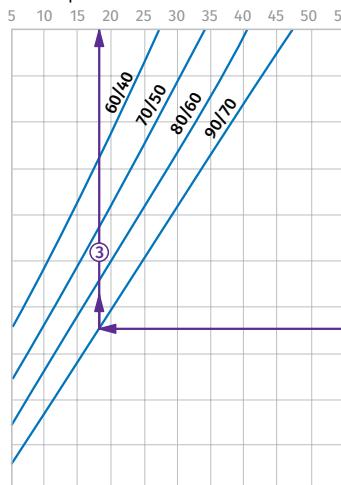

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -20 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the supply air temperature downstream of the heater (+26 °C) ③.

- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -20 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the heater power axis (123.0 kW) ⑤.

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (1.54 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (27.0 kPa).

WKH 90x50-2

Air temperature downstream of the water heating coils [°C]

How to use water heater diagrams.
System Parameters: Air flow = 7000 m³/h.

Outside air temperature = -20 °C.

Water temperature (in/out) = +90/+70 °C.

The air flow is 7000 m³/h and the air speed in the heater is 4.4 m/s ①.

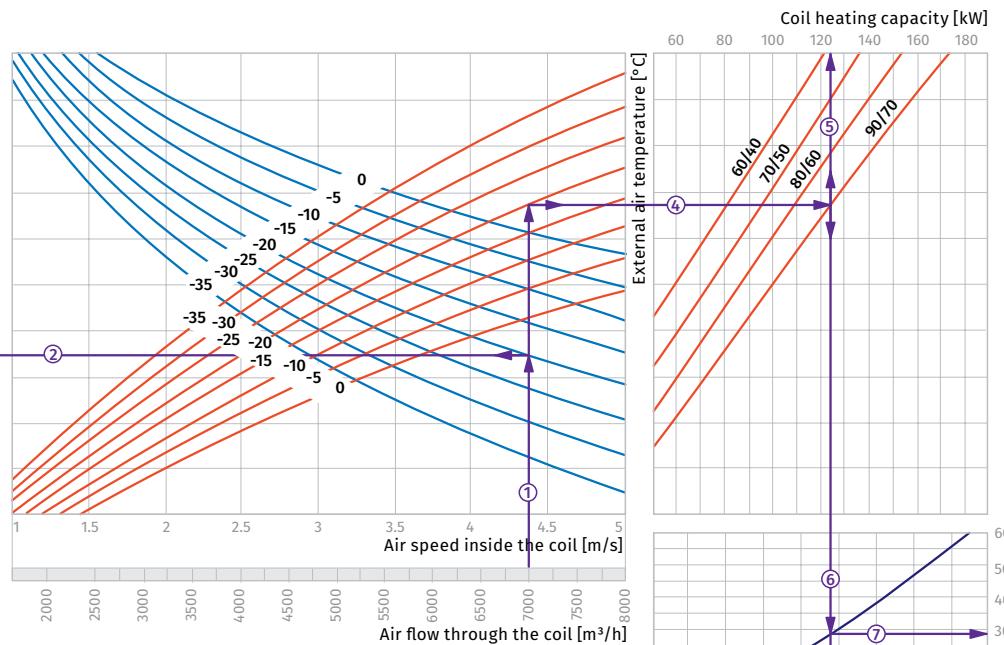

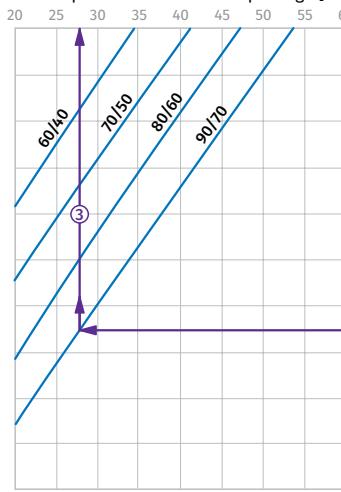

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -20 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the supply air temperature downstream of the heater (+18 °C) ③.

- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -20 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the heater power axis (102.0 kW) ⑤.

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (1.23 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (21.0 kPa).

WKH 90x50-3

Air temperature after heater passage [°C]

How to use water heater diagrams.
System Parameters: Air flow = 7000 m³/h.

Outside air temperature = -20 °C.

Water temperature (in/out) = +90/+70 °C.

The air flow is 7000 m³/h and the air speed in the heater is 4.4 m/s ①.

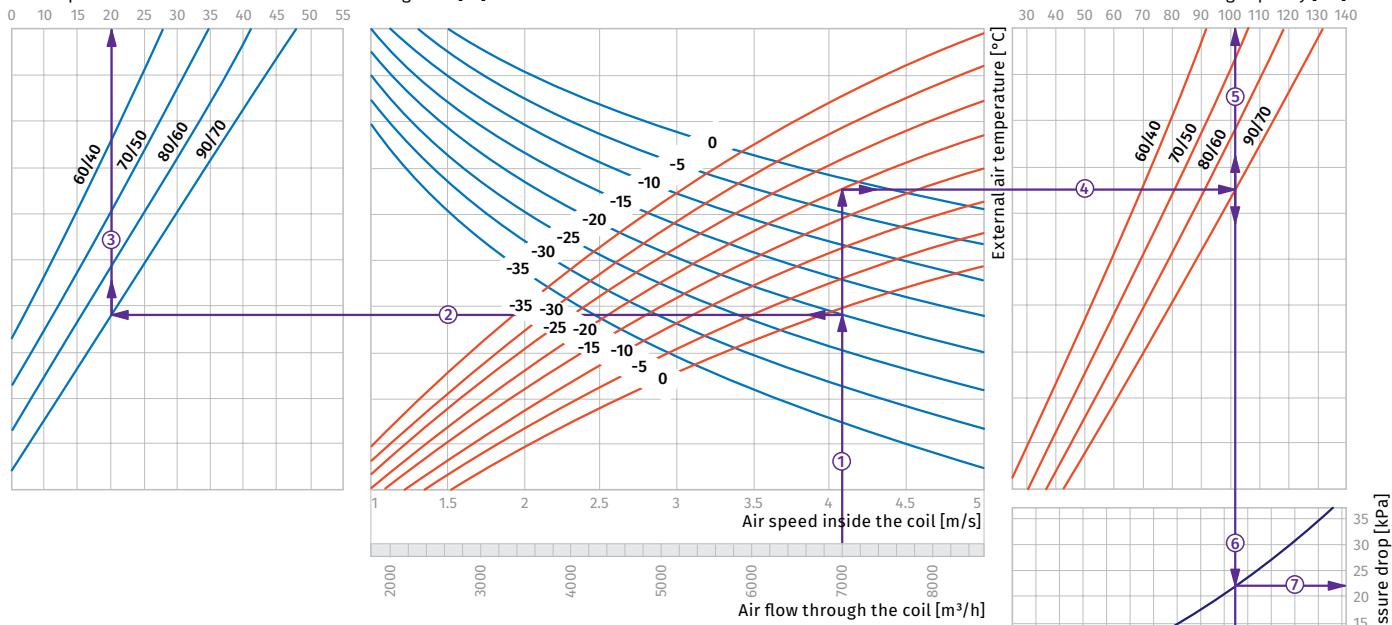

- To calculate the maximum air temperature find the intersection point of the air flow line ① with the rated outer temperature shown in blue line (e.g., -20 °C) and draw the line ② to the left until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the supply air temperature downstream of the heater (+28 °C) ③.

- To calculate the heater power find the intersection point of the air flow ① with the rated winter temperature shown in red line (e.g., -20 °C) and draw the line ④ to the right until it crosses the water in/out temperature curve (e.g., +90/+70). From this point draw a vertical line to the heater power axis (124.0 kW) ⑤.

- To calculate the required water flow in the heater prolong this line ⑥ downwards to the water flow axis (1.55 l/s).
- To calculate the water pressure drop in the heater find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure drop axis (28.0 kPa).

WKH 100x50-2

KWK

Duct water cooling units for rectangular air ducts

Features

- Supply air cooling for ventilation systems in various premises.
- Suitable for installation into supply ventilation or into air handling units to provide air cooling.

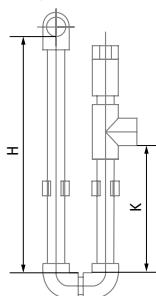

Design

- Galvanized steel casing.
- The cooling elements are made of copper tubes and aluminum plates.
- Available in three-coil modifications and rated for maximum operating pressure 1.5 MPa (15 bar).
- Polypropylene droplet separator and drain pan for condensate drainage and removal included.
- Droplet separator is efficient at an air flow not exceeding 4 m/s.

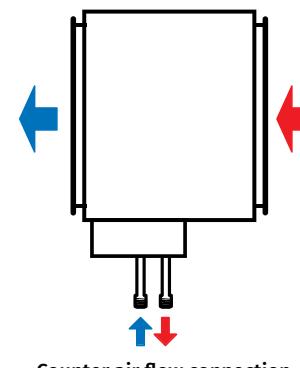

Mounting

- Only horizontal mounting by means of flanged connection. Air evacuation and condensate drainage must be provided.
- Air filter installation upstream of the cooling unit to prevent the unit soiling.
- Installation position must ensure uniform air flow distribution in the section.
- Mounting upstream or downstream of the supply fan. The minimum air duct length downstream of the fan must be 1-1.5 m to ensure air flow stabilization.
- The maximum cooling capacity is attained if the cooling unit is connected on counter-flow basis. The attached charts are valid for counter-flow connection.
- If water is used as a cooling agent, the cooling unit is suitable for indoor use only with the ambient temperature not below 0 °C.
- If antifreezing solution, for example, ethylene glycol solution, is used as a cooling agent, the cooling unit is suitable for outdoor use as well.
- While mounting the cooling unit provide condensate drainage through the U-trap. The U-trap height must be selected with respect to the total fan pressure, refer to the table and diagram below.

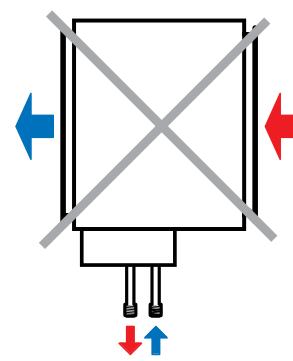

H [mm]	K [mm]	P [Pa]
100	55	600
200	105	1100
260	140	1400

H: U-trap height
K: drain height
P: total fan pressure

Counter air flow connection

Air flow streamwise connection

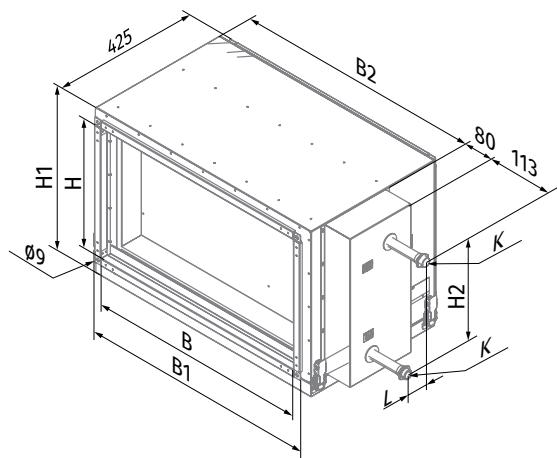

- For a proper and safe operation of the cooling unit it should be connected to a control system for integral control and automatic cooling capacity regulation.

How to use water heater diagrams.

Sample parameters: Air flow = 1400 m³/h

The air flow is 1400 m³/h and the air speed in the cooling unit is 3.1 m/s ①.

- To calculate the coldest air temperature find the intersection point of the air flow line ① with the rated outer summer temperature shown in blue line (e.g., +32 °C) and draw the line ② to the left until it crosses the outdoor air humidity curve (e.g. 50%). From this point draw a vertical line to the supply air temperature downstream of the cooling unit (+20 °C) ③.

- To calculate the power of the cooling unit find the intersection point of the air flow ① with the rated summer temperature (e.g., +32 °C) and draw the line ④ to the right until it crosses the air humidity curve (e.g., 50%). From this point draw a vertical line to the cooling unit power axis (10.0 kW) ⑤.

- To calculate the required water flow in the cooling unit prolong this line ⑥ downwards to the water flow axis (0.4 l/s).
- To calculate the water pressure drop in the cooling unit find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure axis (17.0 kPa).

KFK 50x30-3**How to use water heater diagrams.**Sample parameters: Air flow = 2000 m³/hThe air flow is 2000 m³/h and the air speed in the cooling unit is 3.75 m/s ①.

- To calculate the coldest air temperature find the intersection point of the air flow line ① with the rated outer summer temperature shown in blue line (e.g., +32 °C) and draw the line ② to the left until it crosses the outdoor air humidity curve (e.g. 50%). From this point draw a vertical line to the supply air temperature downstream of the cooling unit (+20.6 °C) ③.

- To calculate the power of the cooling unit find the intersection point of the air flow ① with the rated summer temperature (e.g., +32 °C) and draw the line ④ to the right until it crosses the air humidity curve (e.g., 50%). From this point draw a vertical line to the cooling unit power axis (13.6 kW) ⑤.

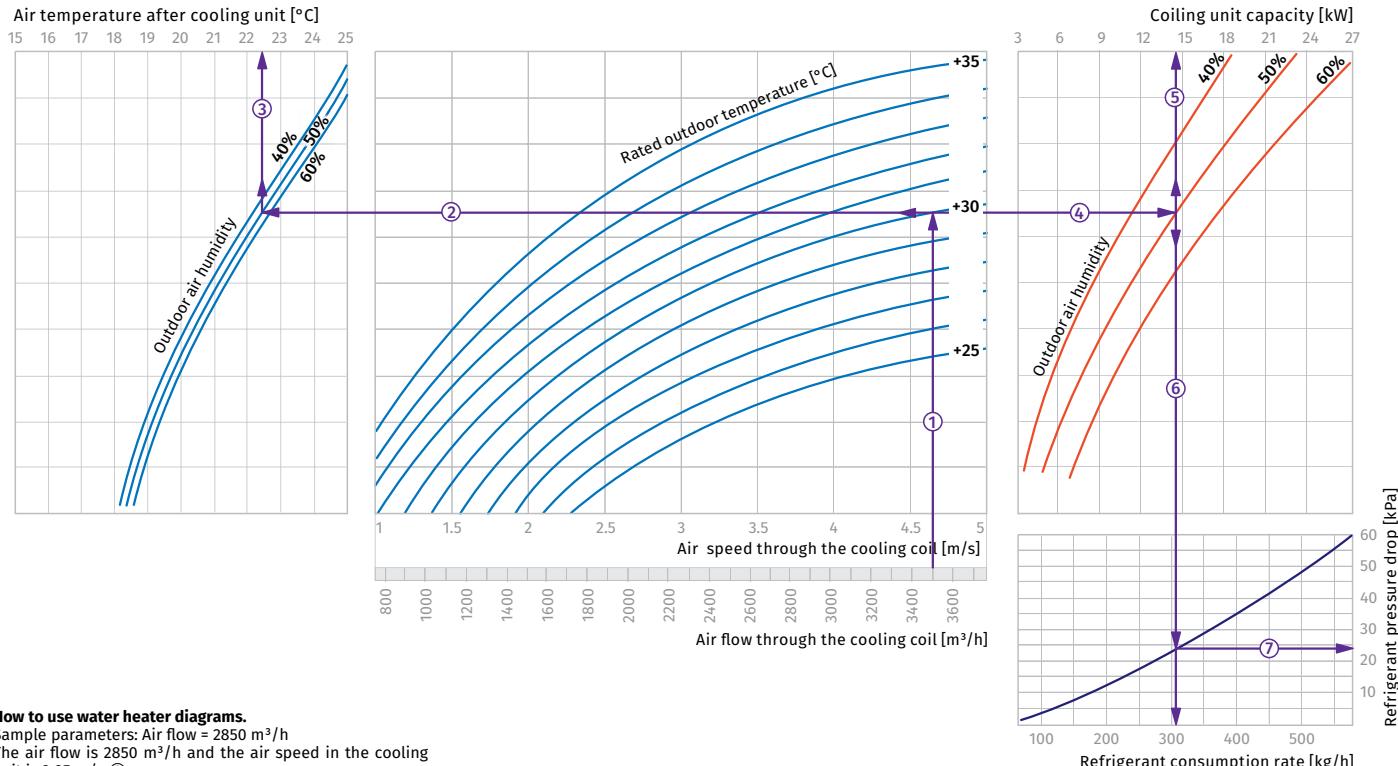

- To calculate the required water flow in the cooling unit prolong this line ⑥ downwards to the water flow axis (0.54 l/s).
- To calculate the water pressure drop in the cooling unit find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure axis (27.0 kPa).

KFK 60x30-3**How to use water heater diagrams.**Sample parameters: Air flow = 2500 m³/hThe air flow is 2500 m³/h and the air speed in the cooling unit is 3.75 m/s ①.

- To calculate the coldest air temperature find the intersection point of the air flow line ① with the rated outer summer temperature shown in blue line (e.g., +32 °C) and draw the line ② to the left until it crosses the outdoor air humidity curve (e.g. 50%). From this point draw a vertical line to the supply air temperature downstream of the cooling unit (+20.7 °C) ③.

- To calculate the power of the cooling unit find the intersection point of the air flow ① with the rated summer temperature (e.g., +32 °C) and draw the line ④ to the right until it crosses the air humidity curve (e.g., 50%). From this point draw a vertical line to the cooling unit power axis (17.0 kW) ⑤.

- To calculate the required water flow in the cooling unit prolong this line ⑥ downwards to the water flow axis (0.68 l/s).
- To calculate the water pressure drop in the cooling unit find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure axis (27.0 kPa).

KFK 60x35-3

How to use water heater diagrams.

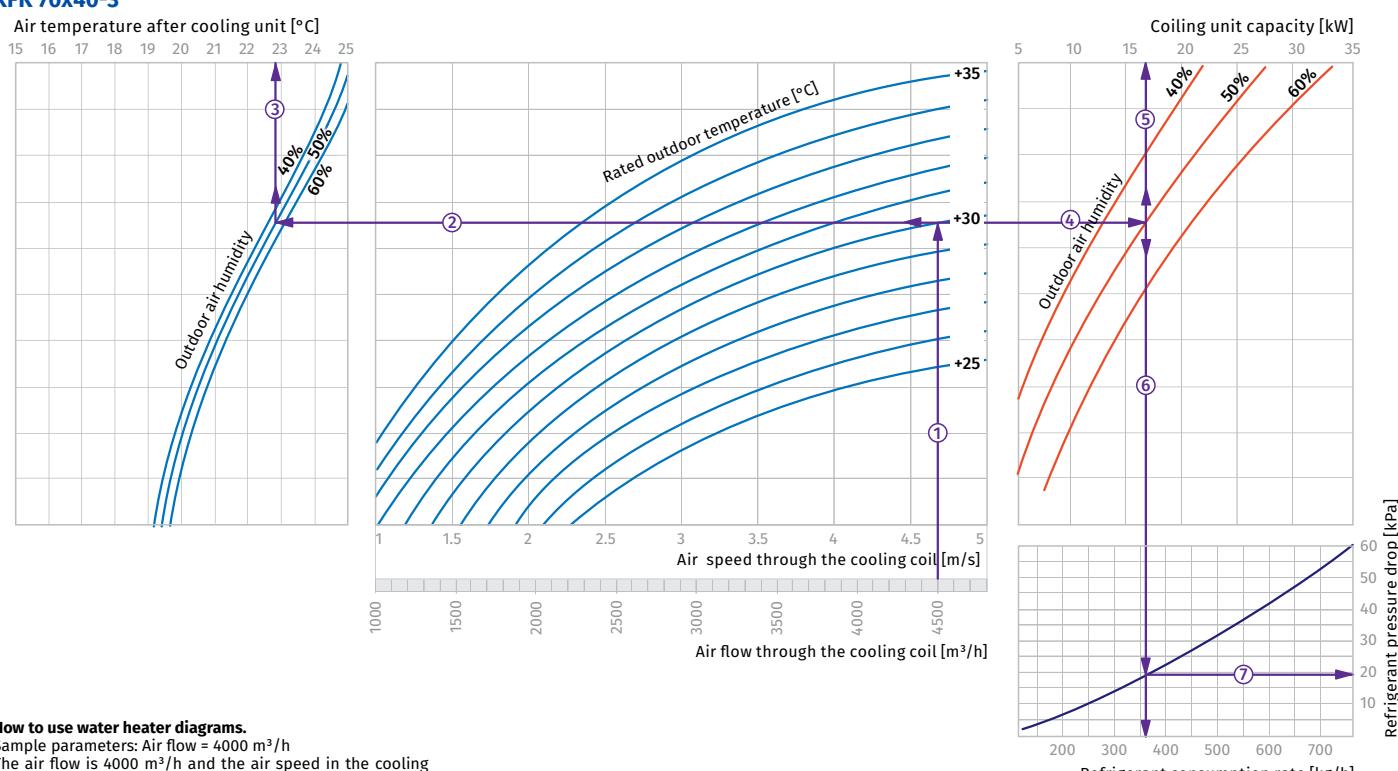

Sample parameters: Air flow = 2850 m^3/h

The air flow is 2850 m^3/h and the air speed in the cooling unit is 3.85 m/s ①.

- To calculate the coldest air temperature find the intersection point of the air flow line ① with the rated outer summer temperature shown in blue line (e.g., +32 °C) and draw the line ② to the left until it crosses the outdoor air humidity curve (e.g. 50%). From this point draw a vertical line to the supply air temperature downstream of the cooling unit (+20.7 °C) ③.

- To calculate the power of the cooling unit find the intersection point of the air flow ① with the rated summer temperature (e.g., +32 °C) and draw the line ④ to the right until it crosses the air humidity curve (e.g., 50%). From this point draw a vertical line to the cooling unit power axis (19.8 kW) ⑤.

- To calculate the required water flow in the cooling unit prolong this line ⑥ downwards to the water flow axis (0.78 l/s).
- To calculate the water pressure drop in the cooling unit find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure axis (30 kPa).

KFK 70x40-3

How to use water heater diagrams.

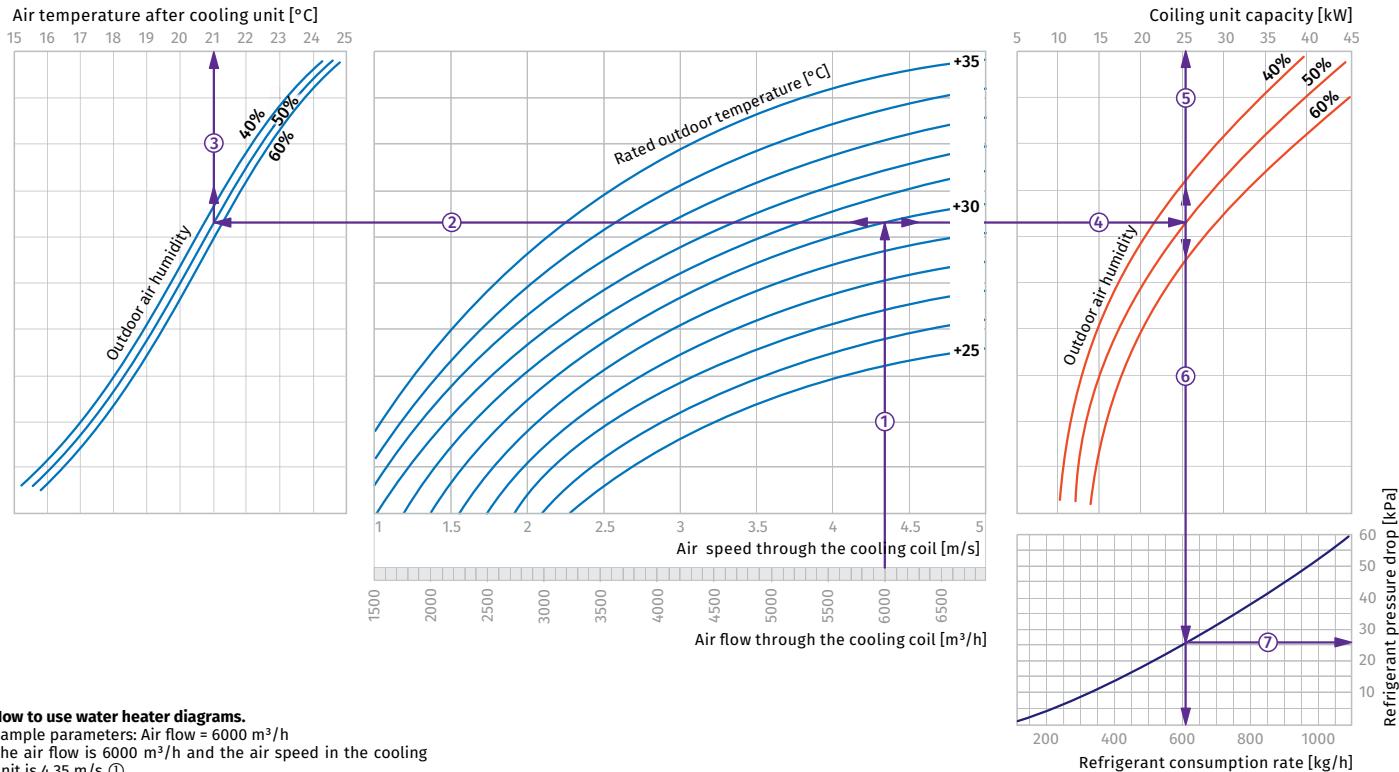

Sample parameters: Air flow = 4000 m^3/h

The air flow is 4000 m^3/h and the air speed in the cooling unit is 4.15 m/s ①.

- To calculate the coldest air temperature find the intersection point of the air flow line ① with the rated outer summer temperature shown in blue line (e.g., +32 °C) and draw the line ② to the left until it crosses the outdoor air humidity curve (e.g. 50%). From this point draw a vertical line to the supply air temperature downstream of the cooling unit (+19.8 °C) ③.

- To calculate the power of the cooling unit find the intersection point of the air flow ① with the rated summer temperature (e.g., +32 °C) and draw the line ④ to the right until it crosses the air humidity curve (e.g., 50%). From this point draw a vertical line to the cooling unit power axis (28.5 kW) ⑤.

- To calculate the required water flow in the cooling unit prolong this line ⑥ downwards to the water flow axis (1.14 l/s).
- To calculate the water pressure drop in the cooling unit find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure axis (28 kPa).

KFK 80x50-3**How to use water heater diagrams.**

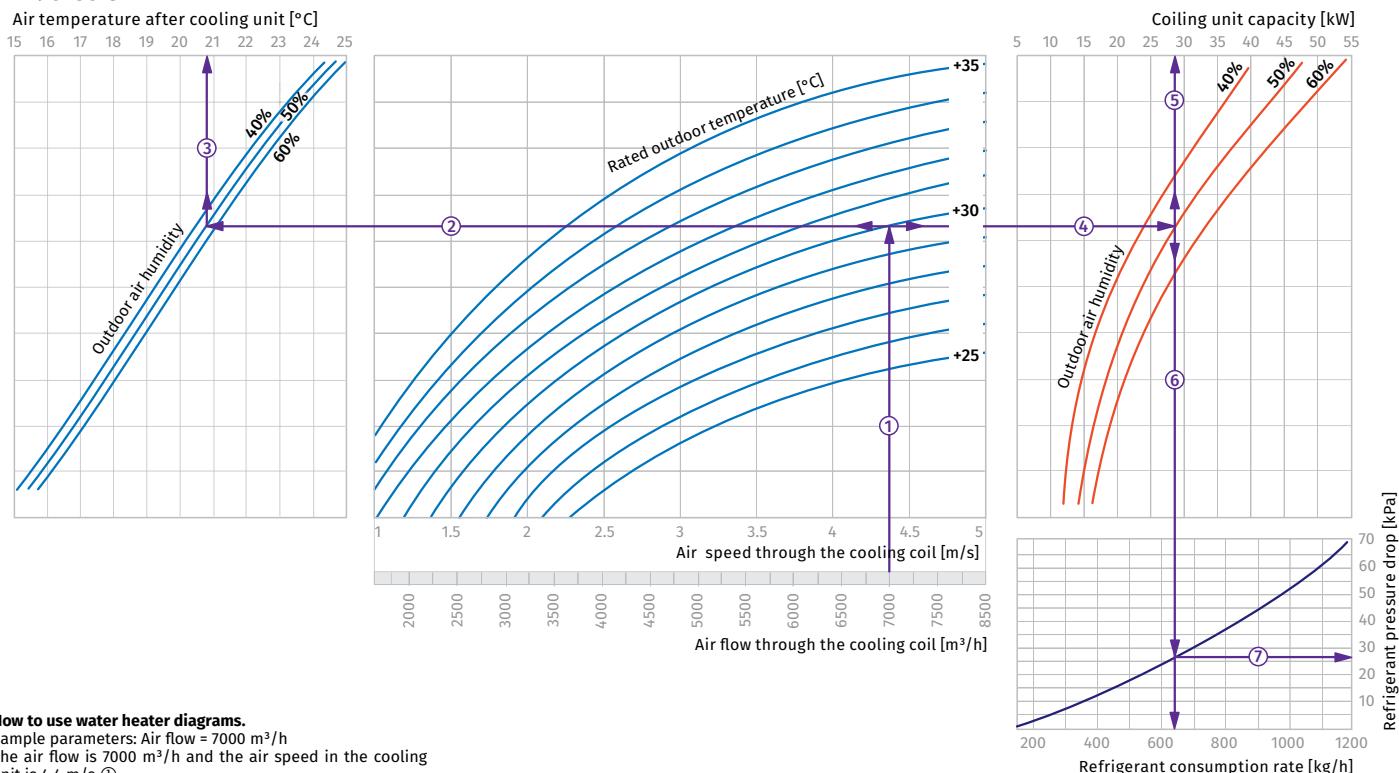

Sample parameters: Air flow = 6000 m³/h

The air flow is 6000 m³/h and the air speed in the cooling unit is 4.35 m/s ①.

- To calculate the coldest air temperature find the intersection point of the air flow line ① with the rated outer summer temperature shown in blue line (e.g., +32 °C) and draw the line ② to the left until it crosses the outdoor air humidity curve (e.g. 50%). From this point draw a vertical line to the supply air temperature downstream of the cooling unit (+19.9 °C) ③.

- To calculate the power of the cooling unit find the intersection point of the air flow line ① with the rated summer temperature (e.g., +32 °C) and draw the line ④ to the right until it crosses the air humidity curve (e.g., 50%). From this point draw a vertical line to the cooling unit power axis (43 kW) ⑤.

- To calculate the required water flow in the cooling unit prolong this line ⑥ downwards to the water flow axis (1.7 l/s).
- To calculate the water pressure drop in the cooling unit find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure axis (36 kPa).

KFK 90x50-3**How to use water heater diagrams.**

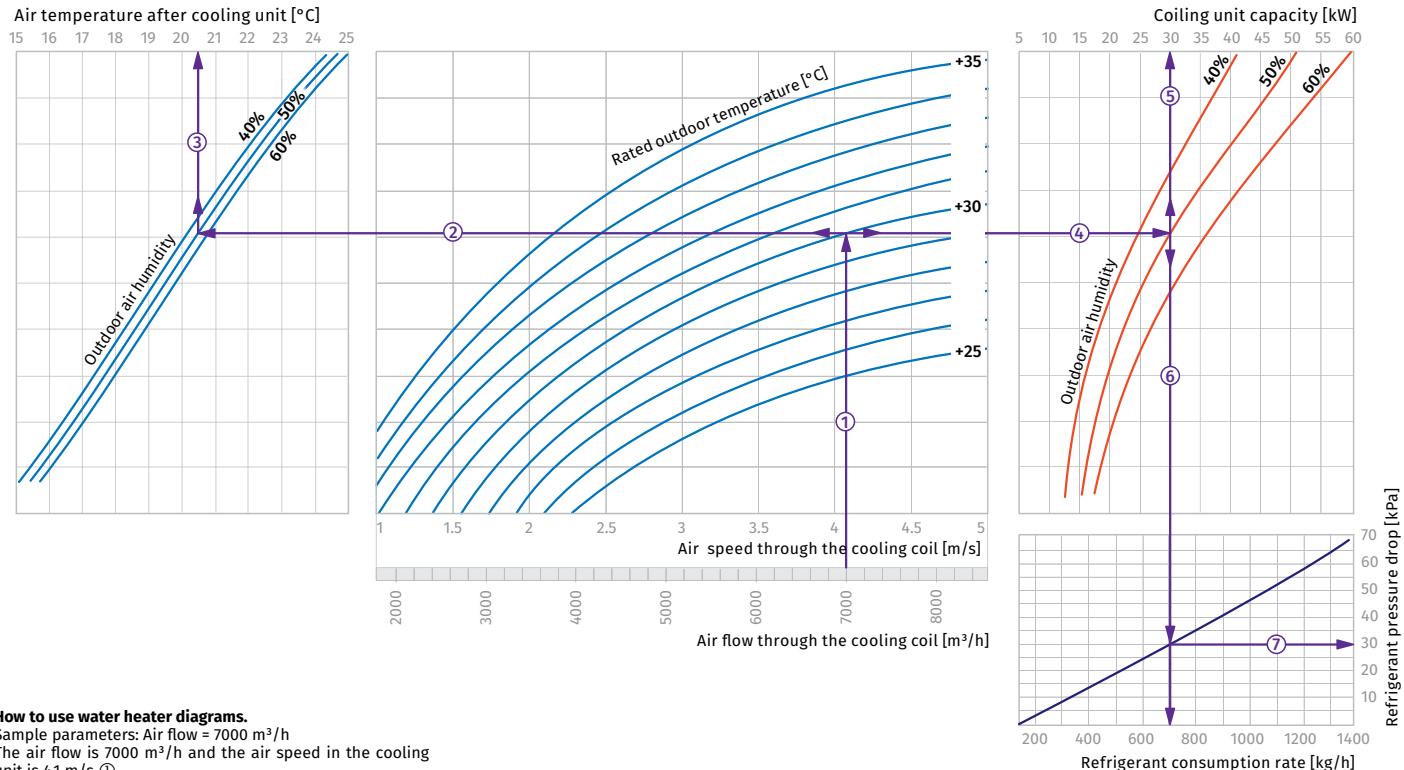

Sample parameters: Air flow = 7000 m³/h

The air flow is 7000 m³/h and the air speed in the cooling unit is 4.4 m/s ①.

- To calculate the coldest air temperature find the intersection point of the air flow line ① with the rated outer summer temperature shown in blue line (e.g., +32 °C) and draw the line ② to the left until it crosses the outdoor air humidity curve (e.g. 50%). From this point draw a vertical line to the supply air temperature downstream of the cooling unit (+19.7 °C) ③.

- To calculate the power of the cooling unit find the intersection point of the air flow line ① with the rated summer temperature (e.g., +32 °C) and draw the line ④ to the right until it crosses the air humidity curve (e.g., 50%). From this point draw a vertical line to the cooling unit power axis (47 kW) ⑤.

- To calculate the required water flow in the cooling unit prolong this line ⑥ downwards to the water flow axis (1.9 l/s).
- To calculate the water pressure drop in the cooling unit find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure axis (34 kPa).

KFK 100x50-3

How to use water heater diagrams.

Sample parameters: Air flow = 7000 m³/h

The air flow is 7000 m³/h and the air speed in the cooling unit is 4.1 m/s ①.

- To calculate the coldest air temperature find the intersection point of the air flow line ① with the rated outer summer temperature shown in blue line (e.g., +32 °C) and draw the line ② to the left until it crosses the outdoor air humidity curve (e.g. 50%). From this point draw a vertical line to the supply air temperature downstream of the cooling unit (+19.6 °C) ③.

- To calculate the power of the cooling unit find the intersection point of the air flow ① with the rated summer temperature (e.g., +32 °C) and draw the line ④ to the right until it crosses the air humidity curve (e.g., 50%). From this point draw a vertical line to the cooling unit power axis (52 kW) ⑤.

- To calculate the required water flow in the cooling unit prolong this line ⑥ downwards to the water flow axis (2.05 l/s).
- To calculate the water pressure drop in the cooling unit find the intersection point of the line ⑥ with the pressure loss curve and prolong the line ⑦ to the right on the water pressure axis (37 kPa).

SD

Silencers for round ducts

Features

- For attenuation of noise produced by a ventilation system and spreaded along ventilation ductworks.
- Used jointly with sound-insulated fans in premises with high requirements to noise level produced by ventilation equipment.
- Compatible with Ø100 mm up to 315 mm round air ducts.

Design

- Galvanized steel case is filled with non-flammable sound-absorbing material with protecting covering against fiber blowing.
- Airtight connection with air ducts due to connecting flanges with rubber seals.
- A great variety of standard ranges with several length options.

Mounting

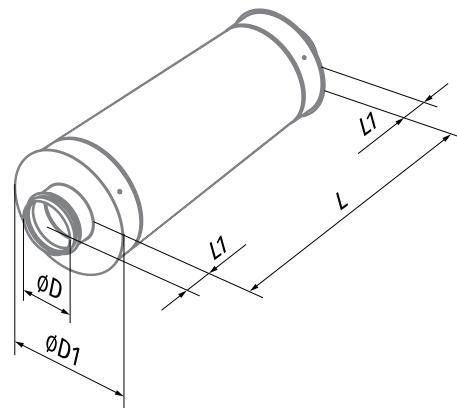

- Fixing to round ducts with clamps.
- Any mounting position.
- For better sound absorption install the silencers in series.

SDF

Flexible silencers for round ducts

Features

- For attenuation of noise produced by a ventilation system and spreaded along ventilation ductworks.
- Used jointly with sound-insulated fans in premises with high requirements to noise level produced by ventilation equipment.
- Compatible with Ø100 mm up to 315 mm round air ducts.

Design

- Consists of outer and inner flexible spiral seam air ducts made of aluminium alloy and filled with non-flammable sound-absorbing material.
- Internal surface is perforated and covered with protection coating to prevent fiber blowing-out.
- A great variety of standard ranges with several length options.

Mounting

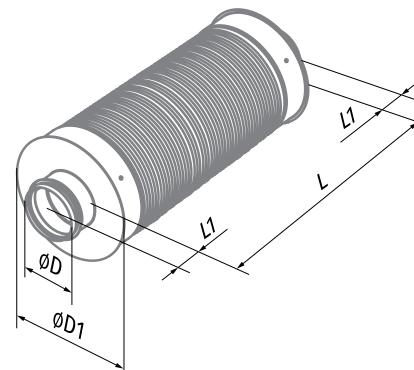

- Fixing to round ducts with clamps.
- Any mounting position.
- For better sound absorption install the silencers in series.
- Fixing on both ends and in the middle to prevent sagging.

Silencers for rectangular ducts

Features

- For attenuation of the noise produced by a ventilation system and spreaded along ventilation ductworks.
- Used jointly with sound-insulated fans in premises with high requirements to noise level produced by ventilation equipment.
- Compatible with 400x200 up to 1000x500 rectangular air ducts.

Design

- Galvanized steel case and sleeves.
- The plates are filled with non-flammable sound-absorption material with protecting coating to prevent fiber blowing.

Mounting

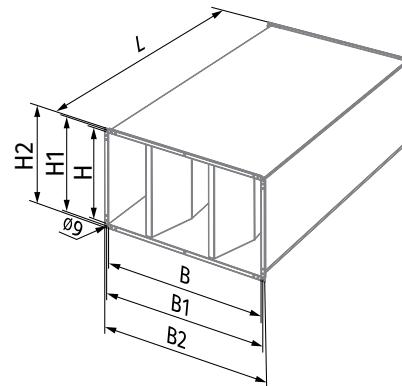

- Fixing to rectangular ducts with flange connection.
- For maximum sound absorption capacity provide a straight air duct section at least 1 m long towards the silencer.
- For better sound absorption install the silencers in series.

VKA

Air dampers for round ducts

Features

- For automatic shutoff of air ducts installed in ventilation systems of various premises.
- Compatible with Ø80 to 450 mm round air ducts.

Design

- The casing and the rotary blade are made of galvanized steel.
- Airtight connection to air ducts due to rubber seals.
- A shaft and a mounting pad are provided for BELIMO electric actuator. Compatible actuators are shown in the table below.

Mounting

- Fixing to round ducts with clamps.
- While mounting provide enough space for accessing the electric actuator.

VK

Air dampers for rectangular ducts

Features

- For manual regulation of air flow or shut-off of air ducts.
- Compatible with 400x200 up to 600x350 mm rectangular air ducts.

Design

- Galvanized steel case and rotary blade.
- Manual regulation with a metal handle equipped with a lever and a locking device for fixing the position of the rotary blade.

Mounting

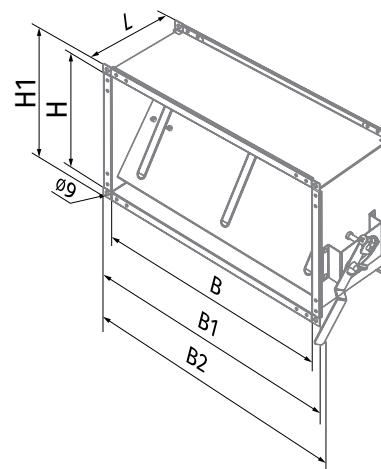

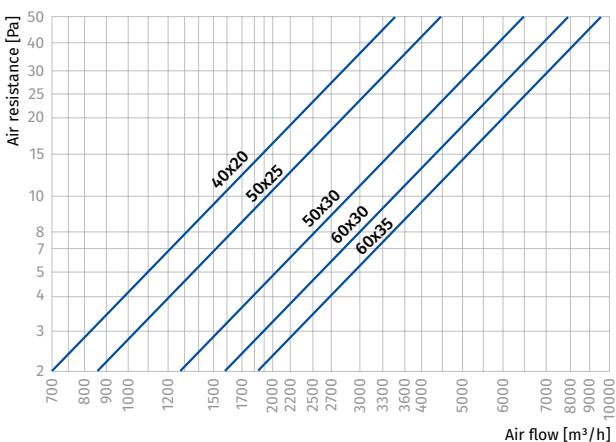

- Fixing to rectangular ducts with flange connection.
- Mounting with galvanized bolts and clamps that fix the end flanges of the air shutter to the mating flanges of the air ducts or any other ventilation system components.

AVK

Air dampers for rectangular ducts

Features

- For automatic regulation of air flow volume or shut-off of air ducts installed in various premises.
- Compatible with 400x200 up to 600x350 mm rectangular air ducts.

Design

- Galvanized steel case and rotary blade.
- Automatic control of the regulating mechanism with a servo actuator installed on the damper shaft. Three-point circuit provides regulation of the rotary blade; adjustable with mechanical stop blocks, maximum angle 95°. The servo actuator has overheating protection.
- Switching to manual control mode if required.

Mounting

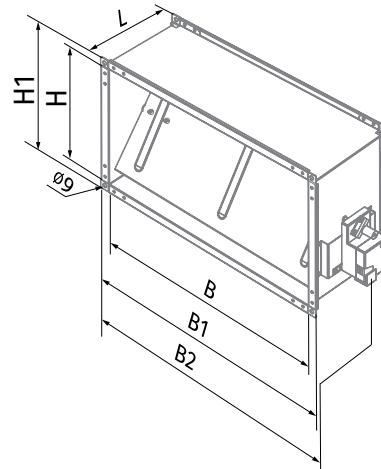

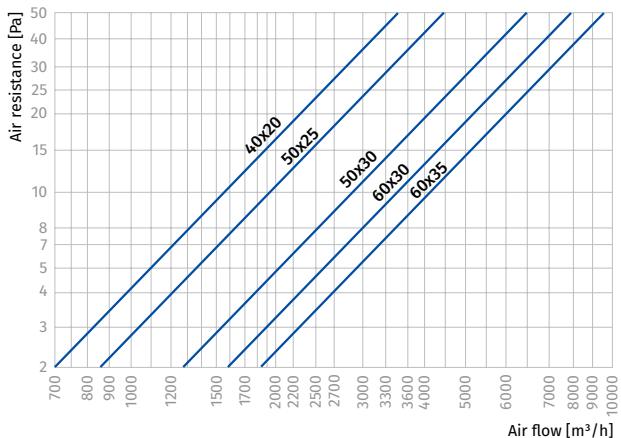

- Fixing to rectangular ducts with flange connection.
- Mounting with galvanized bolts and clamps that fix the end flanges of the air shutter to the mating flanges of the air ducts or any other ventilation system components.
- While mounting provide enough space for accessing the servo actuator.

Designation key

SL

Air dampers for rectangular ducts

Features

- For manual regulation of air flow volume or shut-off of air ducts installed in ventilation systems of various premises.
- Compatible with 400x200 mm up to 1000x500 mm rectangular air ducts.

Design

- The multi-blade design with the counter-rotated blades.
- The casing is made of galvanized steel.
- The rotary blades from aluminium profile are rotated with the gears.
- Air flow manual regulation with a metal handle equipped with a lever and a locking device to fix position of the rotary blades.
- A shaft and a mounting pad are provided for BELIMO electric actuator. Compatible actuators are shown in the table below.

Mounting

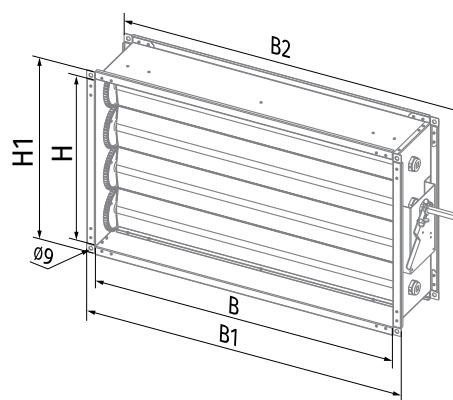

- Fixing to rectangular ducts with flange connection.
- Mounting with galvanized bolts and clamps that fix the end flanges of the air flow regulators to the mating flanges of the air ducts or any other ventilation system components.

VRV

Backdraft dampers with spring for round ducts

Features

- For automatic shutoff of the air ducts and prevention of back drafting when the fan is off. Suitable for installation in various premises.
- Compatible with Ø100 up to 315 mm round air ducts.

Design

- Galvanized steel case.
- Two spring-loaded blades made of aluminium.
- Blades are opened by air pressure and are closed with a spring.

Mounting

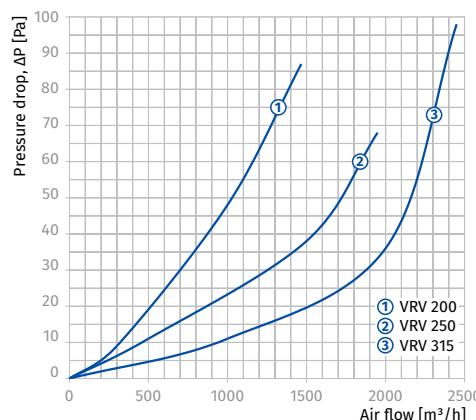

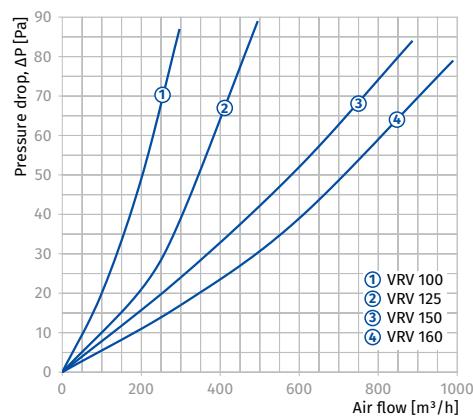

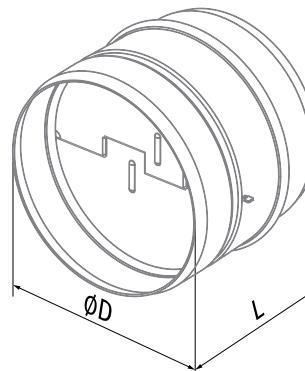

- Fixing to round ducts with clamps.
- Provide vertical position of blade axis.
- Install the backdraft damper into the ventilation system with respect to the air flow direction.

Designation key

Series	Connected air duct diameter [mm]

VRVS

Backdraft air dampers for round ducts

Features

- For automatic shut-off of the air ducts and prevention of back drafting when the fan off. Suitable for installation in various premises.
- Compatible with Ø100 up to 315 mm round air ducts.

Design

- Galvanized steel case and rotary gravity-actuated blade.
- Airtight connection with the air ducts due to rubber seals.
- The damper blade is opened with air pressure and reset automatically when the fan is off and no air pressure is produced.
- Manual handle with a counterweight to regulate the damper opening-closing sensitivity.

Mounting

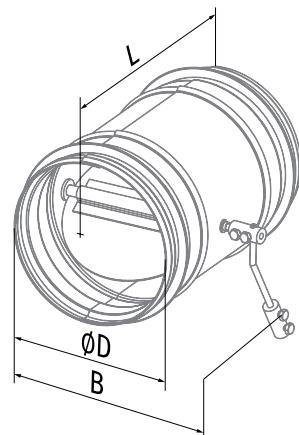

- Fixing to round ducts with clamps.
- Provide free gravity actuated movement of the blade.
- Install the backdraft damper into the ventilation system with respect to the air flow direction.

VG

Gravity air dampers for rectangular ducts

Features

- For automatic shutoff of air ducts installed in various premises when the fan is off.
- Gravitationally actuated.
- Compatible with 400x200 up to 1000x500 mm rectangular air ducts.

Design

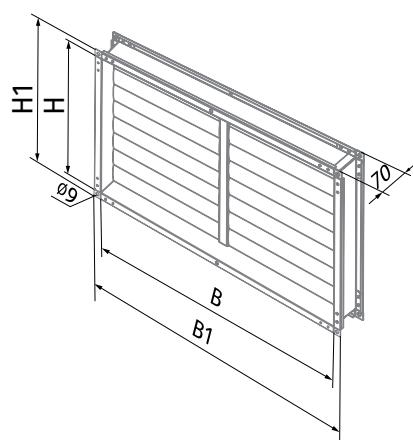

- Galvanized steel case.
- Equipped with pivoted gravity louvre shutters made of PVC built into a frame.
- Louvre shutters are opened by air pressure and are closed automatically when the fan is off.

Designation key

Series	Flange size [cm]

EVA

Flexible antivibration connector for round ducts

Features

- For damping vibration generated by fans or ventilation equipment and transferred to air ducts.
- For partial compensation of ductworks distortion resulting from temperature changes.
- Compatible with Ø100 up to 500 mm round air ducts.

Design

- Two galvanized steel flanges.
- Connecting vibration-isolating material is made of nylon reinforced polyethylene fabric.
- Not designed for mechanical load and cannot be used as a load-carrying structure.

Mounting

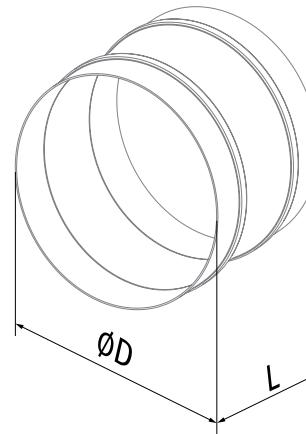

- Flexible vibration damping connectors are fixed to air ducts with clamps.

Designation key

EVAF

Flexible antivibration connector for round ducts

Features

- For damping the vibration generated by fans or ventilation equipment and transferred to air ducts in ventilation systems of various premises.
- For partial compensation of ductworks temperature deformation.
- Compatible with Ø200 up to 630 mm round air ducts with flanges.

Design

- Two flanges are made of galvanized steel.
- The connecting vibration-isolating material is made of nylon reinforced polyethylene fabric.
- Not designed for mechanical load and cannot be used as a load carrying structure.

Mounting

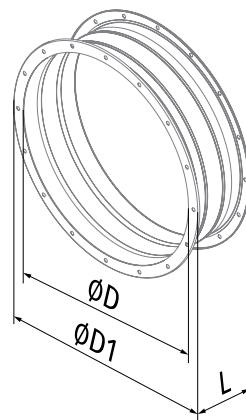

- Flexible vibration damping connectors are fixed to air ducts with flange connection.

CleanBox

Filter box

Use

- For purification of supply air in ventilation and air conditioning systems installed in various premises
- Compatible with Ø100 up to 200 mm round air ducts.
- Suitable for limited mounting space.

Design

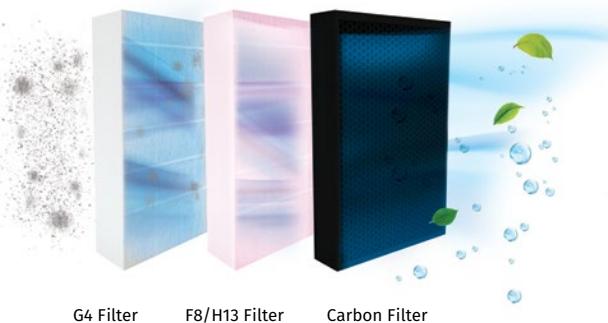

- The casing is made of polymer-coated steel.
- Easy access for filter maintenance.

Mounting

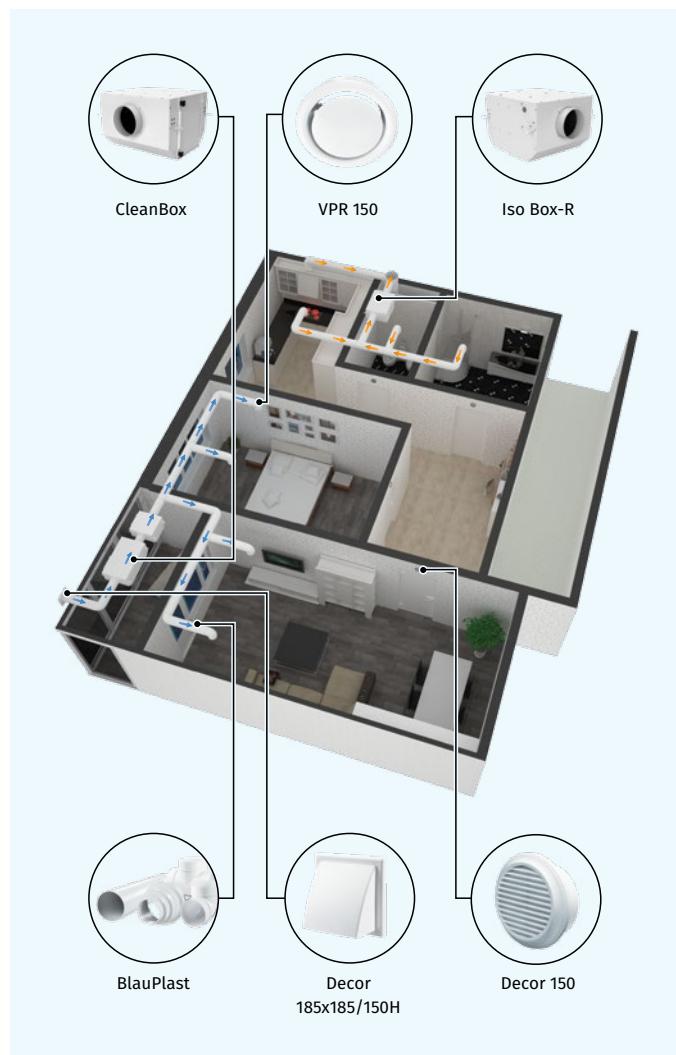

- Due to compact design is the ideal solution for mounting in limited spaces, including the space behind false ceiling.
- Any mounting position.
- Wall or ceiling mounting with fixing brackets supplied as a standard.

Air filtration

- Built-in filters provide efficient air filtration. Up to three filters can be installed into the casing.
- G4 filter provides primary filtration. At the second stage, the secondary filter F8 or HEPA filter H13 can be installed. F8 filter arrests up to 98 % of PM 2.5 dust particles. H13 filter arrest up to 99 % of PM2.5 dust particles, pollen and bacteria. For additional elimination of odors and gases carbon filter can be installed.
- Quick access to replaceable filters through service panel.

CLEANBOX 200

KFBK

Filter boxes for round ducts

Features

- For purification of supply or extract air in ventilation and air conditioning systems installed in various premises.
- Designed for protection of air ducts, heat exchangers, fans, controls and other ventilation system equipment against dust pollution.
- Prevent contamination of walls and ceilings located near the system.
- Can be used as pre-filters installed upstream to more efficient filters.
- Compatible with Ø100 up to 315 mm round air ducts.

Design

- Galvanized steel case.
- Airtight connection of the filter-box with air ducts due to connecting flanges with a rubber seal.
- Equipped with a flat filter cartridge made of synthetic non-woven cloth with filtration class G4.
- Filter cartridge is fixed on a steel wire frame.
- Quick access to replaceable filter cartridge due to lever locks on the casing.

Mounting

- Fixing to round ducts with clamps.
- Any mounting position.
- While mounting provide extra space for free access to the filter for servicing.

Accessories

- G4 replaceable flat filter cartridges made of synthetic non-woven cloth series FP-KFBK.

KFBV

Filter boxes with V-filter for round ducts

Features

- For purification of supply or exhaust air in ventilation and air conditioning systems installed in various premises.
- Designed for protection of air ducts, heat exchangers, fans, controls and other ventilation system equipment against dust pollution.
- Prevent contamination of walls and ceilings located near the system.
- Can be used as pre-filters installed upstream to more efficient filters.
- Compatible with Ø100 up to 315 mm round air ducts.

Design

- Galvanized steel case.
- Airtight connection of the filter-box with air ducts due to connecting flanges with a rubber seal.
- Equipped with a V-shaped filter cartridge with increased filter surface made of synthetic non-woven cloth with G4 filtration class.
- Filter cartridge is fixed on a steel wire frame.
- Quick access to replaceable filter cartridge due to lever locks on a swivel filter cover.

Mounting

- Fixing to round ducts with clamps.
- Any mounting position.
- While mounting provide extra space for free access to the filter for servicing.

Accessories

- G4 replaceable V-shaped filter cartridges made of synthetic non-woven cloth series FP-KFBV.

KFBT

Filter boxes with pocket filters for round ducts

Features

- For purification of supply or exhaust air in ventilation and air conditioning systems installed in various premises.
- Designed for protection of air ducts, heat exchangers, fans, controls and other ventilation system equipment against dust pollution.
- Prevent contamination of walls and ceilings located near the system.
- Can be used as pre-filters installed upstream to more efficient filters.
- Compatible with Ø100 up to 315 mm round air ducts.

Design

- Galvanized steel case.
- Airtight connection of the filter-box with air ducts due to connecting flanges with a rubber seal.
- Equipped with a replaceable filter bag made of synthetic non-woven cloth with filtration class G4, F5, F7.
- Filter cartridge is fixed on a steel wire frame.
- Quick access to replaceable filter cartridge due to lever locks on a swivel filter cover.

Mounting

- Fixing to round ducts with clamps.
- Any mounting position.
- In case of vertical mounting position provide air stream downwards to avoid filter Yesmming.
- While mounting provide extra space for free access to the filter for servicing.

Accessories

- G4, F5, F7 replaceable filter bags made of synthetic non-woven cloth series FP-KFBT.

AT-25 220/12

Step-down transformer

Use

- Low-voltage step-down transformers are used to ensure safe 12 V / 50 Hz power supply for residential fans with maximum motor power 16 W (25 VA) and maximum load current 2 A.

Design

- Casing made of high-quality plastic.
- Supplied with external fuse blocks.

Protection

- The transformer has overload protection by thermal fuse.
- IP40 ingress protection rating except for the fuse blocks.

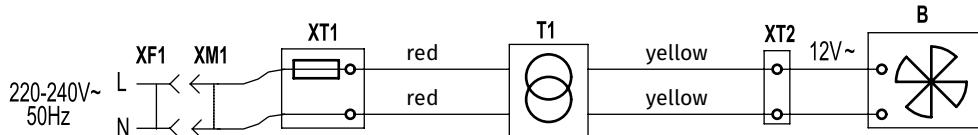

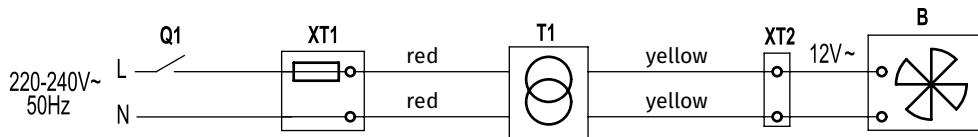

Mounting

- Indoor installation in areas not subjected to high temperature and humidity.
- Suitable for flush mounting behind the false ceiling or wall recess mounting provided that sufficient ventilation is ensured to prevent overheating.
- Do not install the transformer above heating equipment.

Technical data

Parameters	AT-25 220/12
Voltage, 50 Hz [V]	1 ~ 230
Output voltage, 50 Hz [V]	12
Max. power [W]	16 (25 VA)
Maximum load current [A]	2.0
Overall dimensions AxBxC [mm]	
Transformer:	91x58x62
Fuse block:	110x40x40
Max. transported air temperature [°C]	+40
Ingress Protection	IP40
Weight [kg]	0.8

Transformer wiring diagram

Q1 – external switch integrated into the fixed wiring system;
 XT1 – input fuse block with a built-in thermal fuse in a protecting casing;
 XF1 – socket integrated into the fixed wiring system;
 XM1 – standard plug;
 T1 – transformer;
 XT2 – output fuse block for safe 12 V fan connection;
 B – fan with safe 12 V voltage.

ATK-25 220/12

Step-down transformer

Use

- Low-voltage step-down transformers are used to ensure safe 12 V / 50 Hz power supply for residential fans with maximum motor power 16 W (25 VA) and maximum load current 2 A.

Design

- Compact casing made of high-quality plastic.
- ATK-25 220/12 S:** the transformer is equipped with a pull-cord switch and a light indicator.

Protection

- The transformer has overload protection by thermal fuse.

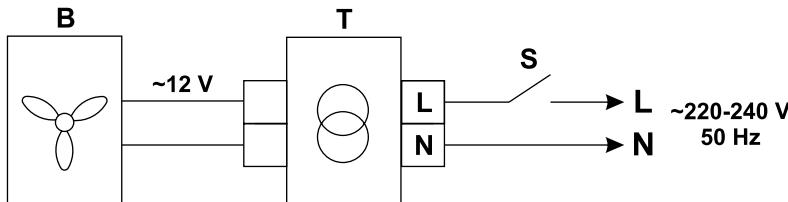

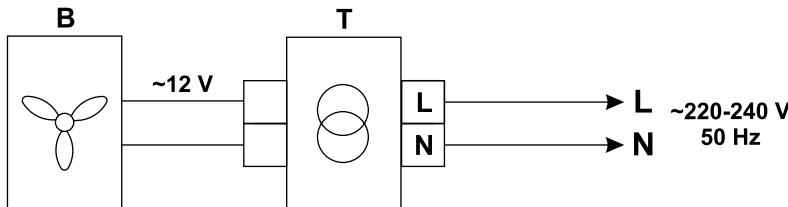

Mounting

- Indoor installation in areas not subjected to high temperature and humidity.
- Designed for wall surface mounting. Provide free air circulation for cooling of internal circuits.
- Do not install the transformer above the heating equipment.

Technical data

Parameters	ATK-25 220/12
Voltage, 50 Hz [V]	1 ~230
Output voltage, 50 Hz [V]	12
Max. power [W]	16 (25VA)
Maximum load current [A]	2.0

S – external switch.

AT-40 230/12

Step-down transformers

Use

- Low-voltage step-down transformers are used to ensure safe 12 V / 50 Hz power supply for the ventilation products with maximum load power 40 W and load current not exceeding 3.3 A.
- Compatible with Vento air handling units.

Design

- Compact casing made of high-quality plastic.
- The casing includes two sealed electric lead-ins and 2x0.75 m² power cables.
- 3 m power cable and a standard electric plug at the transformer input for connection to 220-240 V / 50 Hz power mains.
- 2 m 12 V / 50 Hz power cable with a special contact socket for the Vento air handling unit connection at the transformer output.

Protection

- The transformer has overload protection by thermal fuse.
- IP40 ingress protection rating except for the fuse blocks.

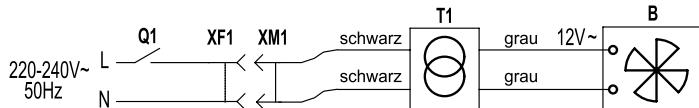

Mounting

- Indoor installation.
- Flush mounting behind the suspended ceiling or wall recess mounting in a well ventilated areas to prevent overheating.
- No installation above heating equipment.

Technical data

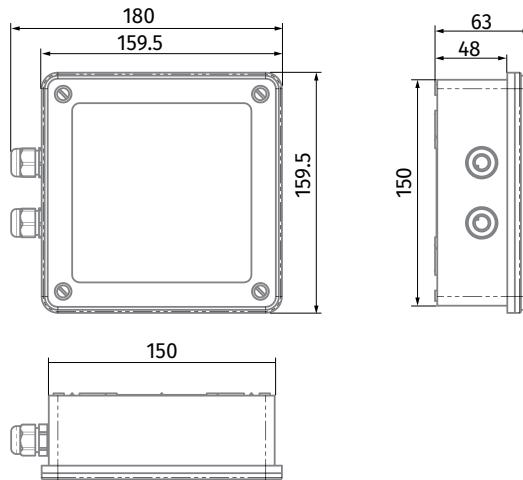

Parameters	AT-40 230/12
Input voltage, 50 Hz [V]	220-240
Output voltage, 50 Hz [V]	12
Max. load power [W]	40
Max. current load [A]	3.0
Max. ambient temperature [°C]	+40
Ingress Protection	IP65
Weight [kg]	1.1

Overall dimensions [mm]

SGR-3/1

Sensor speed switch

Features

- On/off switch and speed selection for multi-speed fans.

Design

- Casing made of high-quality plastic.
- Glass sensor operating panel with three touch buttons for speed selection with light indication.
- Wall flush mounting.
- IP30 ingress protection rating.

Control

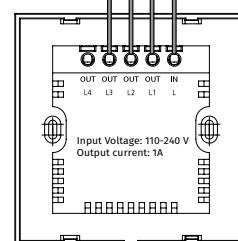

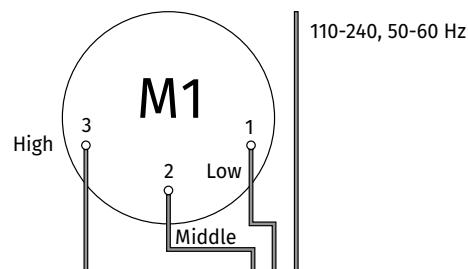

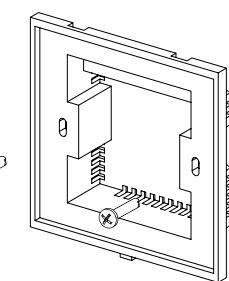

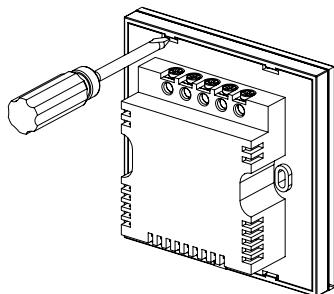

- Required speed is activated by touching the respectively marked speed button.
- The fan is turned off by touching the current speed button.

Mounting

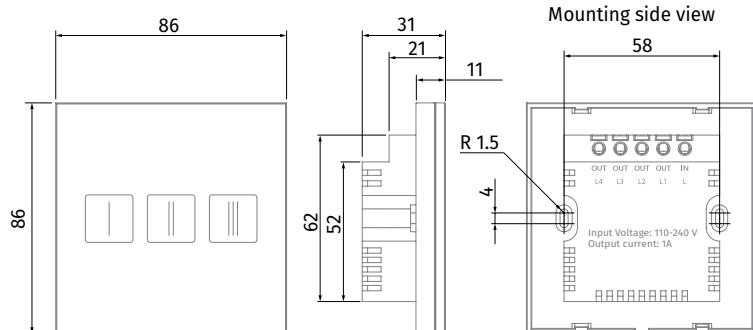

- Designed for wall mounting in a flush mounting box.

Technical data

Parameters	SGR-3/1
Voltage 50-60 Hz [V]	110-240
Max. current load [A]	1
Number of speeds	3
Cable cross section [mm ²]	from 0.35 up to 1
Temperature range [°C]	from -10 up to +45
Operating humidity range [%]	from 5 up to 80 (no condensation)
Service life	100 000 operations
Ingress Protection	IP30
Weight [g]	138

Overall dimensions [mm]

SGS E1

Sensor speed controller

Features

- On/off switch and speed control for single-phase voltage controlled fans.

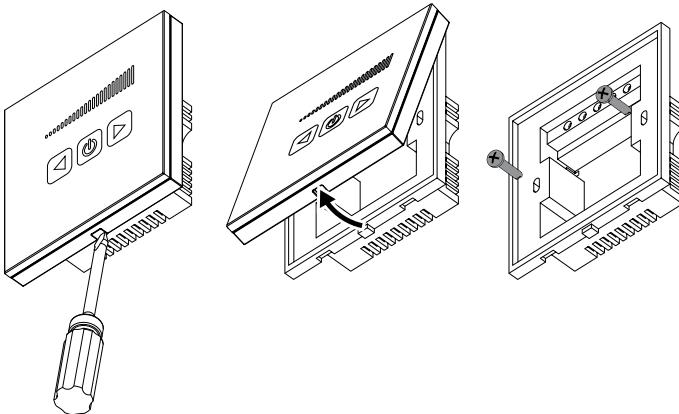

Design

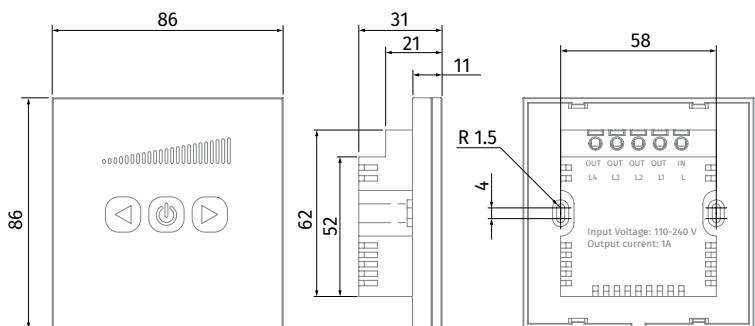

- Casing made of high-quality plastic.
- Glass sensor panel with an ON/OFF button and two speed control buttons.
- The adjustable speed is displayed with the LED indicator.
- Wall flush mounting.
- IP30 ingress protection rating.

Mounting

- Designed for wall mounting in a flush mounting box.

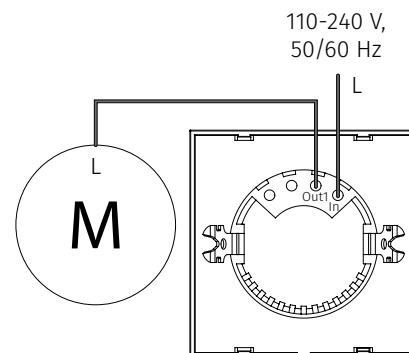

Overall dimensions [mm]

Technical data

Parameters	SGS E1
Voltage 50-60 Hz [V]	1 ~ 230
Max. current load [A]	1
Cable cross section [mm ²]	from 0.35 up to 1
Temperature range [°C]	from -10 up to +45
Operating humidity range [%]	from 5 up to 80 (no condensation)
Service life	100 000 operations
Ingress Protection	IP30
Weight [g]	138

M – ventilation equipment motor

CDP-2/10

MULTI-SPEED SWITCHES

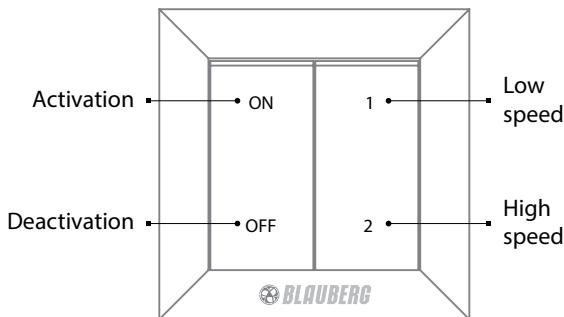

Features

- Speed on/off switch and speed changeover for multi-speed fans
- Wall mounting in a flush mounting box
- Suitable for installation in standard electric junction boxes

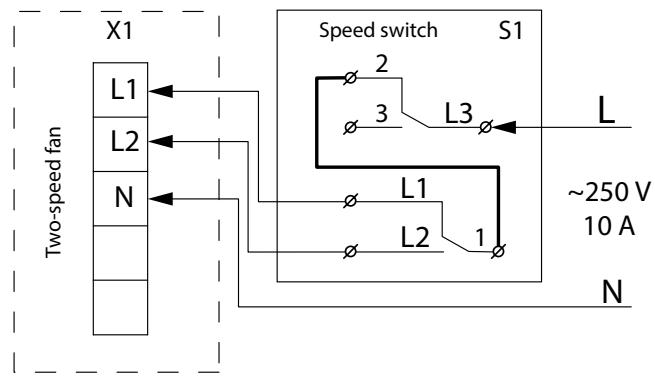

Control

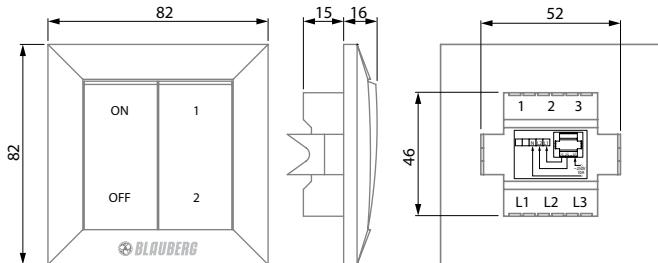

- Direct fan speed switching.

Wiring diagram

Technical data

Model	CDP-2/10
Voltage [V/Hz]	250/50-60
Max current load [A]	10
Cable cross section [mm ²]	from 0.35 up to 0.75
Temperature range [°C]	from -10 up to +45
Operating humidity range [%]	from 5 up to 80 (no condensation)
Service life	1 000 000 switching operations
Weight [g]	98

CDP-2/5 (3/5)

Multi-speed switch

Features

- On/off switch and speed switch for multi-speed fans.

Design

- Casing made of high-quality plastic.
- Flush wall mounting.
- IP40 ingress protection rating.

Control

- Switching of fan speed according to diagram 1 and switching of fan speed in parallel with switching the light in the room, diagram 2.

Mounting

- Indoor wall flush mounting in a mounting box.
- Suitable for installation in standard electric junction boxes.

Technical data

Parameters	CDP-2/5	CDP-3/5
Voltage 50 Hz [V]	1 ~ 230	1 ~ 230
Rated current [A]	3.0	3.0
Number of speeds	2	3
Overall dimensions AxBxC [mm]	88x88x51	88x88x51
Transported air temperature [°C]	40	40
Ingress Protection	IP40	IP40

Wiring diagram options

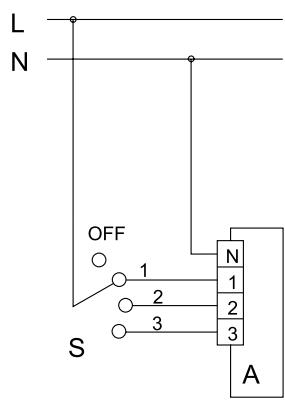

Diagram 1. The external switch S (CDP-3/5) switches the fan to one of three speeds and switches it off.

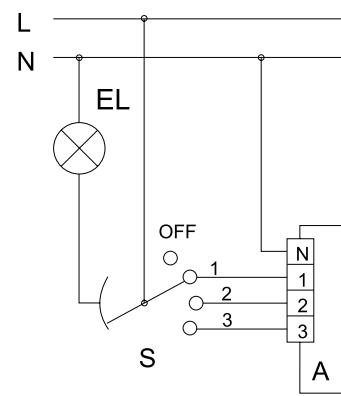

Diagram 2. The external switch S (CDP-3/5) switches the fan to one of three speeds and switches it off with parallel switching on/off the light in the room.

CDT E1.8

Thyristor speed controller

Features

- For switching fans on/off and for speed control of single-phase frequency controlled motors. For ventilation systems in various premises.

Design

- The casing is made of high-quality plastic.
- Mounting junction box for wall flush mounting.
- IP40 ingress protection rating.

Control

- Switching on/off by the control knob.
- Smooth speed control from minimum to maximum value. Minimum speed is set by a variable resistor on the control panel.
- Several fans can be controlled from one unit provided that the total current consumption does not exceed the permissible controller current.
- High efficiency and control accuracy.

Protection

- Input circuit protected with a thermal fuse.
- Equipped with a transient filter.

Mounting

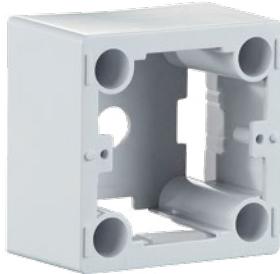

- Indoor wall flush mounting in a mounting box.
- Suitable for installation in standard electric junction boxes.

Options

- Mounting box EDR-E for wall surface mounting available upon separate order.

Technical data

Parameters	CDT E1.8
Voltage 50 Hz [V]	1 ~ 230
Rated current [A]	1.8
Overall dimensions AxBxC [mm]	80x80x63
Transported air temperature [°C]	35
Ingress Protection	IP40
Weight [g]	0.11

CDT E/0-10

Speed control for EC motors

Features

- For switching fans on/off and for speed control of EC motors with 0-10 V control voltage input.

Design

- Casing made of high-quality plastic.
- Mounting junction box for wall flush mounting.
- IP40 ingress protection rating.

Control

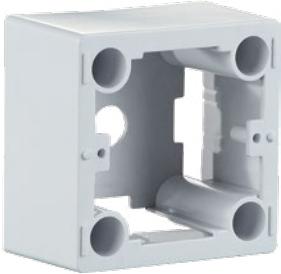

- Switching on/off by the control knob.
- Speed control from minimum to maximum value.
- Featured with high efficiency and control accuracy.

Mounting

- Indoor wall flush mounting in a mounting box.
- Suitable for installation in standard electric junction boxes.

Options

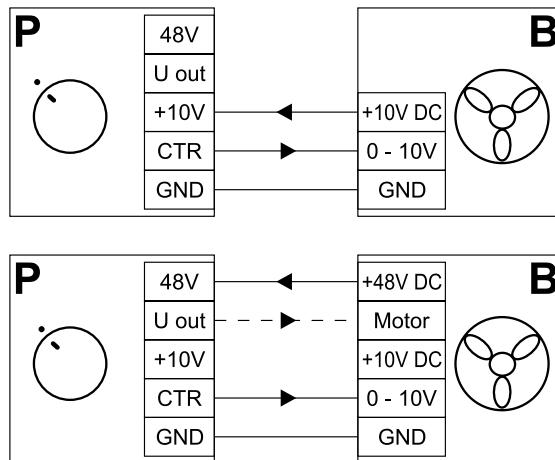

- Mounting box EDR-E for wall surface mounting available upon separate order.

TS E10

Room thermostat

Use

- For comfortable indoor temperature conditions and control of ventilation, heating and air conditioning systems.

Design

- Casing made of high-quality plastic.
- Temperature regulator on front panel and switch for operation mode selection on side panel.
- Supplied in casing for wall mounting.
- IP40 ingress protection rating.

Speed control

- Temperature regulation range from +10 up to +30 °C.
- The regulator has two operating patterns:
 - the contacts close when a temperature set point is reached and the fan turns on;
 - the contacts open when a temperature set point is reached and the fan turns off.

Mounting

- Indoor wall surface installation in mounting box.
- Recommended installation height is 1.5 m above the floor level.
- Do not install the regulator close to windows, heating or cooling equipment.

Regulator connection options

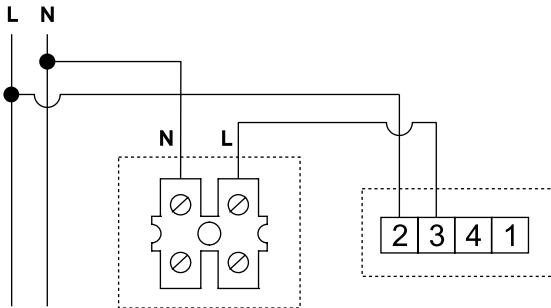

Fig.1. The fan operates until the temperature threshold set by the thermostat is reached.

Technical data

Parameters	TS E10

CDT1 E

Speed controller

Use

- Applied in ventilation systems for speed switching ON/OFF and speed control of single phase power-controlled motors. Several fans can be controlled synchronously in case their total current does not exceed the maximum permissible value of the controller current.

Design and control

- The controller casing is made of plastic. The control knob is equipped with the pilot light. The controller is featured with high efficiency and control accuracy. Switching is effected by means of pressing the control knob. Regulating starts from the minimum to the maximum voltage value for the fan stable running. The minimum speed is set by means of the potentiometer at the PCB. The controller is equipped with extra 230 V terminal for connection and control of the external equipment.

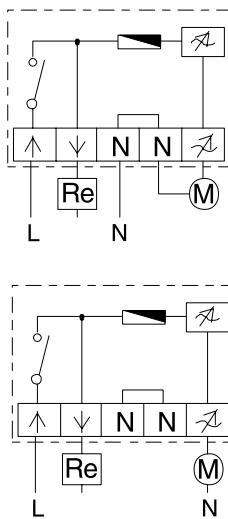

Protection

- Input circuit of the speed controller has a thermal fuse for overload protection. The controller is fitted with a transient filter.

Mounting

- The universal design of the controller enables its mounting either on the wall or through the wall, suitable for installation into standard round electric junction boxes.

Room temperature regulators

Use

- Automatic or manual temperature control in ventilation and air conditioning systems installed in various premises.
- Automatic regulation of heating/cooling rate.
- Control of fans, fancoil dampers and air heating units equipped with three-speed 230 V fans.

Design

- Casing made of high-quality plastic.
- Equipped with a temperature sensor.
- LED display with illumination and control knobs incorporated in front panel.
- The display shows: set and current indoor temperature; operation mode for cooling, heating or auto; fan speed.
- IP40 ingress protection rating.

Speed control

- Control by control buttons on regulator casing or by remote control panel (MLCD E2 model).
- Manual or automatic regulation of indoor temperature. Fan speed high/medium/low. On automatic mode fan speed is regulated by indoor temperature.
- Automatic regulation of heating/cooling rate in «Night mode»:
Cooling mode: 30 min after activation of the night mode the set temperature for the room automatically starts rising by 1 °C per hour within two hours and stays at this level. After 8 hours the timer turns off and the set temperature resets to initial position.
Heating mode: 30 min after activation of the night mode the set temperature for the room automatically starts dropping by 1 °C per hour within three hours and stays at this level. After 8 hours the timer turns off and the set temperature resets to initial position.
- The set control functions are saved when the thermal regulator is switched off.

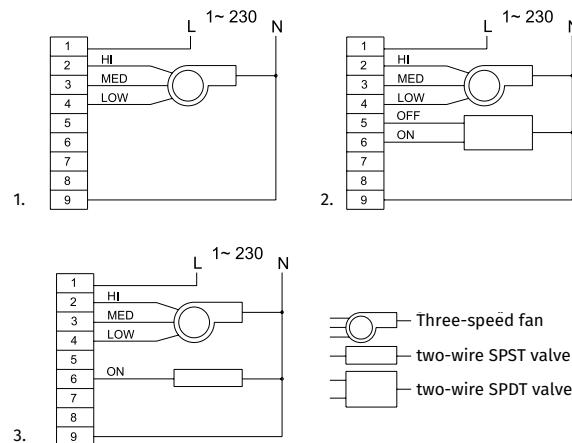

Mounting

- Indoor installation.
- Recommended installation height is 1.5 m above the floor level.
- Do not install the regulator close to windows, heating or cooling equipment.

Modifications and options

- Model MLCD E2: the regulator is equipped with a remote control panel.

Regulator connection options

1. Ventilation with heating and cooling
2. Ventilation with heating and cooling three-wire system of SPDT valves
3. Ventilation with heating and cooling two-wire SPDT valve system

Technical data

Parameters	MLC E2 / MLCD E2
Voltage. 50 Hz [V]	1 ~ 230
Rated current [A]	2.0
Number of speeds	3
Temperature regulating range. °C	+10...+30
Overall dimensions AxBxC [mm]	88x88x51
Max. ambient temperature [°C]	40
Ingress Protection	IP40
Remote control panel	no/yes

CD-1/CD-2

CO₂ sensors

Features

- Indoor carbon dioxide concentration measurement.
- Air flow control depending on CO₂ concentration.
- Efficient energy saving device.

Design

- The sensor has two separate outputs, a normally opened dry relay contact and an analogue output 0–10 V that is adjustable from 2–10 V/0–20 mA/4–20 mA. The relay output is used to turn the fan on/off depending on indoor CO₂ concentration and the analogue output is used for smooth fan speed control for a fan with EC motor or a fan with extra speed controller with 0–10 V input. In case of smooth fan speed control the fan speed varies proportionally to carbon dioxide emissions. Due to the relay and analogue outputs the sensor is compatible with any ventilation system. The self-calibration system ensures reliable sensor operation during the sensor service life.

Modifications

- CD-1: integrated LED lights for indication of CO₂ concentration and a touch button for operation mode switching (mode 1: on, mode 2: off, mode 3: operation according to CO₂ concentration). The button is used to turn the fan on or turn it off when CO₂-based ventilation is not required.
- CD-2: no integrated LED-lights and no touch button. This model is recommended for premises requiring permanent ventilation as school classes and other public premises.

Mounting and power supply

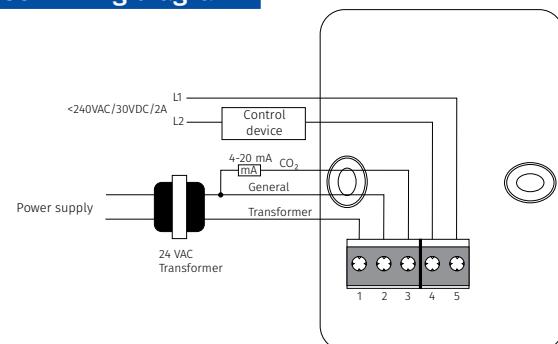

- Wall surface mounting.
- 24 VAC low current power supply.
- The sensor has a socket for AT power unit offered as an accessory (AT-220/25 or AT-120/25 models).

Technical data

Parameters	Value
Power supply / Consumption	24 VAC (50/60 Hz ± 10 %), 24 VDC/1.6 W Max
Gas sensing element	Non-dispersive infrared detector (NDIR) with self-calibration system
CO₂-measuring range	0–2,000 ppm (parts per million)
Accuracy at 25 °C, 2,000 ppm	±30 ppm + 3 % of reading
Response time	max. 2 min
Warm up time for each turning-on	2 hours (first time), 2 minutes (operation)
Analogue output	0–10 VDC (default), 4–20 mA selectable by jumpers
On/Off output	1X2A switch load Four set points selectable by jumpers
6 LED lights for CO₂ concentration indication (for CD-1 model)	1st green indicator lights when CO ₂ concentration is below 600 ppm 1st and 2nd green indicators light when CO ₂ concentration is 600–800 ppm 1st yellow indicator lights when CO ₂ concentration is 800–1200 ppm 1st and 2nd yellow indicators light when CO ₂ concentration is 1200–1400 ppm 1st red indicator lights when CO ₂ concentration is 1400–1600 ppm 1st and 2nd red indicators light when CO ₂ concentration is above 1600 ppm
Operating conditions / Storage regulations	0–50 °C; 0–95 % RH non condensing/0–50 °C
Weight/Dimensions	0.120 kg/100 mm x 80 mm x 30 mm

Sensor wiring diagram

HR-S

Electro-mechanical humidistats

NEW

Purpose

- The humidistat is designed for controlling humidification and/or dehumidification in ventilation, air conditioning and heating systems. Can also be used to alarm when the humidity exceeds or falls below a pre-set level.

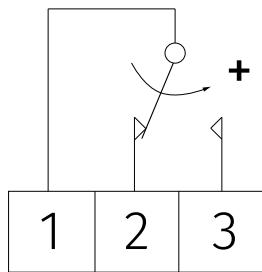

Design

- The single-stage humidistat HR-S uses a synthetic element as sensor medium. The synthetic element stretches as the humidity increases and shrinks as the humidity decreases.

Mounting

- The humidistat is designed for indoor mounting on the wall surface.

Humidistat wiring diagram

Humidification
Dehumidification

Closing contact between terminals 1 and 2
Closing contact between terminals 1 and 3

Technical data

Parameters	HR-S
Switch contact	250 V AC, 5 A
Moisture [%]	20-90
Casing material	Polycarbonate
Temperature range [°C]	0-40
Mounting	Wall surface mounting
Ingress protection	IP30
Dimensions [mm]	86x86x30

DRWQ40200

CO₂ sensor

Features

- Self-calibrating sensor with microprocessor control for measuring carbon dioxide content in the air within the range from 0 to 2,000 million⁻¹ (parts per million).

Design

- DRWQ40200** CO₂ sensor has 2 analogue outputs: 0-10 V and 4-20 mA. An analogue output provides for stepless fan speed control (requires an EC motor fan or a frequency drive).
- With stepless control the fan speed is changed in proportion to carbon dioxide concentration changes. The CO₂ content in the air is measured by means of a non-dispersive infrared analyser (NDIR).

Mounting

- The sensor is mounted onto a wall or a mounting box inside the serviced space. The unit is powered from a 24 V AC/DC low-current electric mains.

Technical data

Parameters	Values
Power source	24 V AC/DC
Gas analyser	optical (NDIR)
CO ₂ measurement range	0-2,000 million ⁻¹ (parts per million) of CO ₂
CO ₂ output signal	0-10 V
CO ₂ measurement precision	± 30 million ⁻¹ (parts per million), ± 5% of maximum value
Operating conditions	0-50 °C; 10-90 % relative humidity without condensate
Protection class	IP55
Dimensions	95x97x30

DPWC11200

Humidity and temperature sensor

NEW

Features

- The DPWC sensor is intended for temperature, humidification and/or dehumidification control in ventilation, air conditioning and heating systems.

Design

- The **DPWC11200** humidity and temperature sensor has 2 analogue outputs: 0-10 V and 4-20 mA. An analogue output provides for stepless fan speed control (requires an EC motor fan).
- With stepless control the fan speed is changed in proportion to the humidity and temperature level. Being equipped with both relay and analogue outputs the sensor is compatible with most every existing ventilation systems.

Mounting

- The sensor is mounted onto a wall in the serviced space. The unit is powered from a 24 V AC/DC low-current electric mains.

Technical data

Parameters	Values
Power source	8-30 V DC / 12-24 V AC
Analogue outputs	0-10 V and 4-20 mA
Temperature measurement precision	±1,2 °C
Humidity measurement precision	±3 % RH
Operating conditions	-10-60 °C; 10-90 % humidity without condensate
Protection class	IP30
Dimensions	127x80x30 mm

DPWQ30600

VOC sensor

NEW

Features

- Sensor is intended for temperature, humidification and/or dehumidification control in ventilation, air conditioning and heating systems.

Design

- **DPWQ30600** VOC sensor has 2 analogue outputs: 0-10 V and 4-20 mA. An analogue output provides for stepless fan speed control (requires an EC motor fan or a frequency drive).
- With stepless control the fan speed is changed in proportion to air quality changes.

Mounting

- The sensor is mounted onto a wall or a mounting box inside the serviced space. The unit is powered from a 24 V AC/DC low-current electric mains.

Technical data

Parameters	Values
Power source	24 V AC/DC
Gas analyser	VOC sensor
Measurement range	0-100 % air quality
Output signal	0-10 V
Measurement precision	±20%
Operating conditions	0-50 °C; 10-90 % relative humidity without condensate
Protection class	IP30
Dimensions	79x81x26 mm

TE/TI 1.5

Timers

HSE/HSI 1.5 LSE/LSI 1.5 IRSE/IRSI 1.5

Sensors

RUN-OUT TIMER TE/TI 1.5

Use

- Automatic regulation of residential fans.
- Keeping the fan running within pre-set time period adjustable between 2 and 30 min after pressing the turn-off button. The run-out timer switches the fan off after the set time expires.
- Setting of ventilation cycle for bathrooms, WC, kitchens and other residential premises.

Design und Mounting

- Casing made of high-quality plastic.
- Indoor installation.
- Model **TE 1.5**: supplied in casing for wall surface mounting.
- Model **TI 1.5**: supplied in casing for flush mounting.

HUMIDITY SENSOR WITH TIMER HSE/HSI 1.5

Use

- Automatic regulation of residential fans.
- Setting of individually adjustable indoor humidity threshold value. Automatically switches the fan on if humidity level in the room exceeds pre-set value.
- Bathrooms, shower rooms, kitchens, water pools and other humid premises.

Design and mounting

- The casing is made of high-quality plastic.
- Indoor installation.
- Model **HSE 1.5**: supplied in casing for wall surface mounting.
- Model **HSI 1.5**: supplied in casing for flush mounting.

Wiring diagram

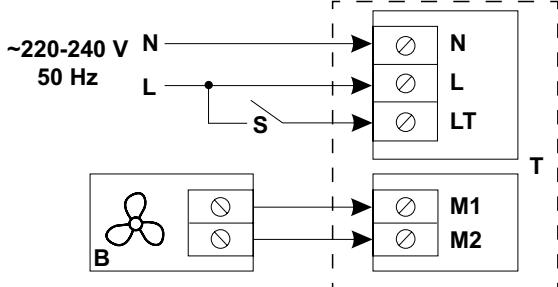

PHOTO SENSOR WITH INTEGRATED TIMER LSE/LSI 1.5

Use

- Automatic regulation of residential fans.
- Bathrooms, WC, kitchens and other periodically occupied premises.
- The integrated photo sensor responds to illumination level changes in the room and switches the fan automatically on or off.
- When the light is turned off the fan continues operating from 2 to 30 min according to timer settings and then is switched off.

Design und Mounting

- Casing made of high-quality plastic.
- Indoor installation.
- Model **LSE 1.5**: supplied in casing for wall surface mounting.
- Model **LSI 1.5**: supplied in casing for flush mounting.

MOTION SENSOR WITH TIMER IRSE/IRSI 1.5

Use

- Automatic regulation of residential fans.
- Bathrooms, WC, kitchens and other periodically occupied premises.
- The integrated infra-red sensor responds to motion registered in the sensitivity area and automatically switches the fan on.
- The fan is turned off from 2 to 30 min after no motion is registered in the sensitivity area. The run-out time is pre-set.

Design and mounting

- Casing made of high-quality plastic.
- Indoor installation.
- Model **IRSE 1.5**: supplied in casing for wall surface mounting.
- Model **IRSI 1.5**: supplied in casing for flush mounting.

BELIMO CM230/CM24

Electric actuators

Features

- For controlling air dampers with cross section up to 0.4 m² installed in various ventilation and air conditioning systems.

Design

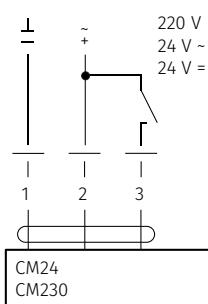

- The electric actuator is provided with a 2 Nm actuating torque and an overload protection.
- The actuator is installed directly on the air damper shaft.
- The angle of rotation is adjusted by mechanical end stops.

Control

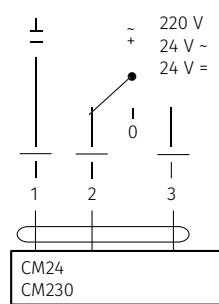

- The air flow control damper can be controlled by means of the three-point or open-close controlling.

Wiring diagram

WMG

Water mixing units for water heating and cooling units

Features

- Smooth heating medium flow regulation and supply air set temperature maintaining in ventilation systems with water heating or cooling coils.
- Compatible with the WKH duct water heating coils and the KWK duct cooling coils.
- Compatible with all water heating or cooling coils installed in BLAUBOX supply units and KOMFORT air handling units.

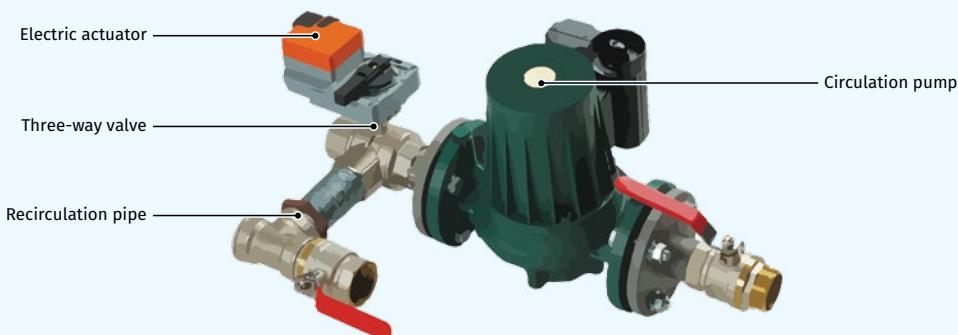

Design

- The water mixing unit consists a circulation pump, a three-way electrically actuated heat medium control valve and a recirculation pipe.
- The three-way valve is designed for smooth mixing of the heat medium stream from the heating (cooling) system and the return heat medium in a required proportion to regulate the heat medium temperature supplied to the water heating or cooling coils.
- The three-way way is actuated with a control 0-10 V signal from the ventilation control system.
- The mixing unit is rated for heat medium operating pressure in the mixing set 10 bar.

Connection to water circuit

- Connection of the mixing unit to the water heating or cooling coils and to the water heating/cooling network through the pipes or flexible hoses of respective diameter, refer to the technical data table.
- In case of applying flexible hoses the mixing unit must be rigidly fixed.
- While installing the mixing unit the motor shaft must be installed horizontally. No mechanical loads from the pipes are allowed.

* heat medium transmission factor $K_{vs} = \sqrt{\frac{V_{100}}{\Delta p v_{100}}} \cdot 100$, where $\Delta p v_{100}$ — pressure loss when the heat medium valve is fully opened.
 V_{100} — rated heat medium flow at $\Delta p v_{100}$.

Mixing unit calculation diagram

Mixing unit selection: find the required heat medium flow through the heating (cooling) unit as well as heat medium pressure drop (available head). These parameters are determined using the heating or cooling unit calculation diagram for each water heating or cooling unit.

SFK 20x32

Hydraulic siphon kit for water heat exchangers

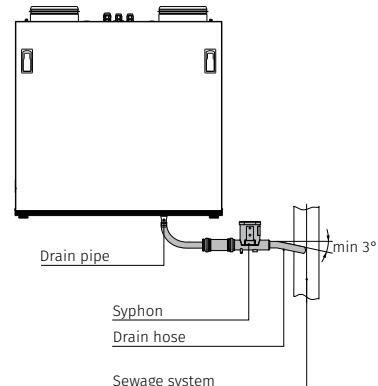

Features

- The hydraulic siphon kit for water heat exchangers SFK 20x32 is designed for condensate drainage from heat exchangers and coolers in ventilation and air conditioning systems.
- The siphon must be connected to a drain pan pipe Ø18 mm.

Design

- When the condensate is drained from the ventilation unit, it passes the drain pipe through the flexible PVC hose, the connection coupling and reaches the siphon with the mechanical locking device that does not let sewage system odours out after the hydraulic seal dries out. Then the condensate is moved to the sewage system.
- The SFK 20x32 kit consists of:
 - Coupling 32/32
 - Rubber sleeve 32/20
 - Siphon
 - PVC hose 15x2 of 1000 mm length
